Propagation Forecast Bulletin 5 ARLP005
From Tad Cook, KT7H
Seattle, WA January 31, 1997
To all radio amateurs

SB PROP ARL ARLP005
ARLP005 Propagation de KT7H

This week's bulletin is really the same as last week's. There is just no solar cycle progress to report. Solar flux is still in the low seventies, and is expected to remain that way over the next month. Of course this forecast of low activity is based upon the previous solar rotation, so it only means that there has been no activity over the past month that we can use to predict additional effects when it rotates into view again.

There was a geomagnetic disturbance last week, with the maximum effect on January 28 when the K indices went as high as five and the planetary A index was 21. Based on this we could see some unsettled conditions again around February 23.

The lack of sunspots has been disappointing. Most observers expected more activity out of the next solar cycle by now. But this is only based upon activity over previous cycles, so all we can do is wait.

Sunspot Numbers for January 23 through 29 were 0, 12, 11, 12, 11, 11 and 16 with a mean of 10.4. 10.7 cm flux was 73.4, 74.2, 73.1, 74.1, 73.5, 72.9 and 74.6, with a mean of 73.7. Estimated planetary A indices for the same period were 3, 3, 6, 13, 13, 21, and 8, with a mean of 9.6.

>type.
>
>Obviously that is overstatement to make a point, but you get the idea.
>
>Leaving all the "code testing is good/code testing is bad" arguments
>aside for this thread, what are your feelings on Lyle's speech?

I think he hit the nail squarely on the head.

>Should we trash all our current band plans, and say "let the best mode
>win"?

No, and I don't think Lyle was precisely advocating that either. What I take him to be saying is that *government mandated* band plans are a strait jacket we should ask to be eliminated. Part 97 and government rulemaking proceedings are not the place to manage amateur spectrum utilization in an era of rapid technological change. We need a much more flexible, and much quicker, method of allocating our resources among many interests.

Such divisions can be very informal, such as the old split between AM and SSB in the 50s, or less informal local or regional agreements led by voluntary groups. If bandplanning is in any way formalized, it should be reviewed and adjusted frequently. This is an era of rapid technological change. We need to be able to deal with spectrum allocations rapidly too.

>Would that encourage technological innovation? Or just foster a "QRO
>war"?

If rigid spectrum allocations, and rigid emission limits, are removed, I would expect this to foster technological innovation. I would also expect QRO wars by fringe elements among the users of older technologies.

That's a war I'd expect them to lose. One of the key characteristics of the sorts of technologies Lyle is advocating is extreme resistance to jamming and lack of need to run high power. The would be jammers would thrash a lot, but they would accomplish very little.

>Would we then REALLY learn how to best share our assigned spectrum, or
>would chaos rule?

I would expect both. The strong technologies would work, while causing little disruption to mannerly users of older technologies. The fringe elements among users of older technologies would cause problems for *each other* in their attempts to disrupt the more modern systems. That would likely motivate users of older technologies who are primarily interested in successful communications to switch to the newer methods. Over time, I'd expect a general migration to the newer methods, with the resulting benefits of better spectral utilization, just as most AMers eventually switched to SSB.

>
>parkin@solartron.com

Judging by postings on the Internet, people in the USA don't in general take much care with either spelling or grammer. In scientific and engineering circles, at least, the same SI standards apply worldwide. "M" is the abbreviation for Mega and "m" for milli. "Hz" is the abbreviation for hertz. (Yes, SI calls for capitalization of the abbreviation of hertz but not for the unit itself, even though it's named for a person. This also holds for henry, farad, ohm, etc.) So 10^6 hertz is correctly abbreviated MHz.

SB QST @ ARL $ARLB005
ARLB005 ARRL members asked to comment

ZCZC AG05
QST de W1AW
ARRL Bulletin 5 ARLB005
From ARRL Headquarters
Newington CT January 31, 1997
To all radio amateurs

SB QST ARL ARLB005
ARLB005 ARRL members asked to comment

ARRL members are being invited to add their ideas, comments and recommendations to those of the ARRL WRC-99 Planning Committee, which has suggested sweeping--and potentially controversial--changes to the Amateur Radio licensing structure in the US. On the table for open discussion and debate are proposals that include:

elimination of the Novice license
creation of a new Intermediate license to replace the Technician Plus
greater hf privileges for intermediate licensees than for the existing technician plus, including phone on 160, 75 and 15 meters
a 10-wpm General CW test (with more stringent testing standards for all CW exams)
expanded phone privileges for General-class and higher licensees

Details of the plan, discussed during the recent ARRL Board of Directors meeting in Albuquerque, New Mexico, will appear in March QST. The Board says it seeks comments from members to ensure that before any plan goes forward, it enjoys broad support from the amateur community. The Board will not act on the issue at least until its July meeting.

After its research revealed that as many as three Novices in four are inactive, the committee concluded that the Novice license is no longer useful. Although the committee would end the Novice license, its plan provides current Novices with an easy means to upgrade (via an open-book test) to the new Intermediate class license, which would replace the current Technician Plus. All present Tech Plus licensees would become Intermediate licensees. The Basic license would supplant the Technician license--now the hobby's most-popular entry-level ticket--with no changes in privileges. In addition, the committee's plan would phase out the current Novice and Tech Plus bands on 80, 40 and 15 meters, and replace them with new Intermediate-class

allocations. The committee's consensus plan for Intermediate-class licensees calls for new CW bands on 80, 40 and 15 meters starting 25 kHz up from the lower band edge, digital and phone-band privileges on 75 and 15 meters and a 50-kHz phone or CW segment at the top end of 160 meters, plus expanded Novice and Tech Plus CW and phone allocations on 10 meters.

According to the proposal, Intermediate CW bands would be 3525 to 3700 kHz, 7025 to 7050 kHz, 21025 to 21150 kHz and 28050 to 28300 kHz. Digital operation was suggested for 3600 to 3625, 21100 to 21125 and 28100 to 28189 kHz. Phone privileges would include 1950 to 2000, 3900 to 4000, 21350 to 21450, SSB from 28300 to 28500 and FM from 29500 to 29700 kHz. Transmitter power for Intermediate-class licensees would be limited to 200 W PEP output (other licensees using these bands would not be limited to 200 W, however).

General-class and higher amateurs also would benefit from the plan, if it's adopted according to the committee's outlines. General-class hams would get additional phone privileges 3800 to 3850, 7200 to 7225, and 21250 to 21300 kHz; Advanced-class hams would add 3725 to 3775, 7125 to 7150 and 21175 to 21225 kHz; Extra-class hams would also have 3700 to 3750, 7125 to 7150 and 21150 to 21200 kHz.

With the exception of 40 meters, where Novice and Tech Plus licensees already have privileges, the committee suggested no changes on the hobby's narrowest and most crowded bands--including 20 meters and the narrow WARC bands at 30, 17 and 12 meters.

The Intermediate CW test would be 5 words per minute (the same as the current Tech Plus requirement), but the committee proposed that the General class CW requirement be set at 10 wpm. There still would be no additional CW exam for the Advanced ticket, nor would there be any change in the 20-wpm requirement for the Extra. Exams for all classes would include a return to a sending test and the requirement for one minute of solid copy during a five-minute test--instead of the current method that tests on the content of the CW text.

Right now, these major changes are only in the talking stage. ''Let us be very clear about this,'' said ARRL Executive Vice President David Sumner, K1ZZ, who characterized the committee's proposals as a starting point for discussion, not a done deal. ''The changes are not ARRL policy; nothing has been proposed to, or by, the FCC, and the ARRL Board is committed to making no decision before its July 1997 meeting.'' Sumner said there is no timetable to complete the process. Only after there is an opportunity for in-depth consideration and discussion by the membership will the ARRL Board consider taking the next step--to approach the FCC with a rulemaking proposal--a process that automatically invites additional comments and suggestions.

Between the time they receive March QST and the end of May, members are asked to voice their opinions on the committee's suggestions to their directors, whose postal and e-mail addresses are listed on page

10 of QST. All suggestions and comments--positive and negative--are
welcome.

I just picked up my FT-50R and sent it in for the CAP/MARS mod. The TX on UHF opens it from 420.000MHz to 470.000MHz. If there is a different mod to extend the upper UHF freq. to 480.000MHz I'd sure like to know about it. I'm waiting to change out the standard keyboard with the FTT-12.

I might be wrong on some of the details, so maybe someone can correct me if I'm wrong.

LAMDA threatened to sue the ARRL based on a Connecticut law that prohibits discrimination based on sexual preference. All of this started because LAMDAs monthly ad wasn't placed/paid for before the publication deadline. Like any other ad, if the publisher doesn't receive it in time, it doesn't get published. From what I understand, LAMDA thought that the ARRL was being discriminatory against them and threatened to sue under the Connecticut law. The ARRL had to make acommodations before publishing QST. Like I said, I don't know all of the details, so maybe someone could enlighten us all.

2438. >> Delaware QSO Party Feb 1-2 <<

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-31 00:00:00 UTC
From: radio@copland.udel.edu
Message-ID: <5ctu76$aib@copland.udel.edu>
Source record: 205763

Finally - the Delaware QSO Party!!

Sponsored by the First State Amateur Radio Club

Who - All radio amateurs in and out of Delaware

When - First full weekend in February (1997: Feb 1 & 2)
Saturday: 1700Z (1200 EST) until 0500Z Sunday (2400 EST Sat.)
Sunday: 1300Z (0800 EST) until 0100Z (2000 EST Sun.)

Where - Suggested frequencies are:

Phone CW
1.860 1.825
3.960 3.550
7.260 7.050
14.260 14.050
21.360 21.050
28.360 28.050

Novice and Technician freqs: 25 kHz above sub-band edge

This does not imply that you may not work any bands you choose,
such as VHF/UHF/SHF. However, as there is only one entry class,
all logs will be judged equally.

How - Work stations once per band and mode.
Exchange signal report and QTH (county for Delaware stations;
state/province/DXCC country for others).

Scoring - There is ONE CLASS for all stations.
Count ONE POINT per PHONE QSO.
Count TWO POINTS per CW/RTTY/Digital QSO.
Multipliers/special event stations: NONE.

Awards - Certificates will be awarded in the following categories:
Within Delaware: first, second and third highest score.
Within each Delaware county: highest score.
Others: first, second and third highest scores.
Further prizes and certificates may be awarded, depending
upon participation and merit.
Certificates and prizes courtesy of Ham Radio Outlet, Delaware.

Submissions-
There are no requirements for dupe sheets, and no forms nor
software offered especially for this contest.

Logs must show date, time, band, mode, station worked, exchange send and received, entrant's call and QTH, and total summary of QSOs and points. You are assumed to be observing the rules of amateur radio and contesting, so that no such written statment is required.

Mail entries within 30 days to: Contest Chairman
FSARC, Inc.
P.O. Box 1050
Newark, DE 19715

Include SASE for results.

E-mail logs with adequate summaries, and any other comment or inquiry to:

radio@udel.edu

Results will be posted through 3830@contesting.com, and e-mailed to NCJ and CQ.

Thanks and LET'S GO DELAWARE!!

: Sounds like they are awfully close-minded if they are going to
: judge 600,000+ amateurs based upon a dozen people who post on a
: regular basis to these newsgroups.

Keep in mind that far more people have Internet access nowadays, then they have access to VHF scanners or SW recievers capable of monitoring hams. The dozen namecalling, flamethrowing ham-noids on these newsgroups may well be the only example of ham radio for many non-hams.

The namecalling regarding the Lambada ARC sets a horrible example for all of us. Were I to make a public posting critical of affirmative action, I would not use epithets like "nigger" or "spic"; if I were to make a public posting critical of Israel's sometimes horrible dealings with its Moslem residents and neighbors, I would not resort to using names like "kike". And yet how many times in this newsgroup have ugly words like "faggot" or "queer" have been used to condemn a tiny gay ARC? Also, posting graphically lurid descriptions of homosexual sex probably won't win any converts, and may well convince the public that the poster has some seriously unresolved hang-ups.

Any decent Usenet browser program will have filter mechanisms that allow automatic exclusion of all traffic from specific email addresses, involving specific subjects, etc. The way to pay Mr. Fisher no mind and leave him howling at the moon is to make use of filters. If you don't have automatic means, just resist the temptation to post a response to his messages as THIS IS WHAT KEEPS HIM GOING.

Yeah, but a couple more verses and some happenin MIDI and I would've
started tapping my foot. Who knows, it might've even progressed to
full-on air drums....

Mark

P.S. I was kidding with Ed, although when I reread it I saw I didn't
do a good job of coming across like that. No harm meant, sorry.

Hi Jerry.... recent and future action by the FCC does provide radio amateurs with a unique opportunity to start the process of removing restictive covenants on ham radio antennas. I alluded to this in my CQ-VHF Magazine article last year. You can find a copy on my Antenna Restrictive Covenants Home page:

http://www.gate.net/~donstone/antenna.html

Martin,

I don't live in Dayton (in fact, I live about half as far away from Dayton as you do), but I can recommend one place to be sure and see in Dayton if you have an interest in airplanes -- particularly military aircraft. That is the Wright-Patterson Air Force Base museum. If you're at all interested in aircraft, don't miss it. Plan to spend at least 4 hours there, more if you're very interested.

Enjoy the Hamvention. Stop by booth #514 and say hello.

73,
Roy Lewallen, W7EL

Others should pay me no mind, then why are you?
You are an ARRL lord so it is OK?

Ed is the same guy who buries his lips deep in the ass of K1ZZ kissing
as hard as he can. He did not defend the former Assistant Field Manager,
Luck Hurder,
when he was fired, luck was trying to do the right thing for hams. Ed
would have made an excellent German in 1940, selling his neighbors to
the Nazis.

Brian:
I wouldn't say rambled, just a long, though-out statement of
some of the joys/uses of ham radio. Burt (K1OIK, or is it K1OINK?)
is the one that started this whole megillah. He's nothing but a
self-centered butthole who like to inflict his views on the rest of
the world (sort of like the crud on 14.313, or even Wayne W2NSD/1).
Those views being correct and everybody else's wrong. Pay him no
nevermind and you'll be okay.

: >response), then I claim, once again, that you are not interested in the
: >facts, but merely in winning the argument. You do your cause no service
: >with such a response.

: You are misinterpreting what Carl is saying. He is *not* saying that
: many existing code test free Techs are professional engineers, though
: certainly there are a few. What he is saying is that many professionals,
: aspiring professionals, and technically inclined members of the public
: are *not radio amateurs at all* because of their perception of of the
: amateur service as represented by those Carl calls "beepers". In other
: words, they aren't interested in being considered second class citizens
: in a hierarchy dominated by manual Morse receiving speed skills.

If there is a problem with public perception, it would be much better
to deal with it directly by highlighting to the public:

1) all the technical marvels achieved by our VHF+ amateurs
2) the fact that CW is a requirement for less than 0.1% of our total
spectrum allocation.
3) the development of new and exciting modes on VHF+
4) etc.

: That image of amateur radio as a Morse speed dominated hierarchy taints
: the perception of amateur radio in toto among technically inclined non-
: amateurs. It says the service is backward and not interested in technical
: advancement because its primary criteria for advancement is based on a
: technically obsolete manual skill.

Are you suggesting that eliminating CW testing for HF will improve
public perception better than promoting our hobby to the public?
Also, CW accounts for at least 40% of amateur HF operating. The skill
is not obsolete.

: The problem is, amateur radio doesn't appear to be one of those
: technical pursuits thanks to the taint of a manual Morse speed
: dominated heirarchy.

And a solution to this problem is public promotion.

Feh.

Morons are morons, regardless of whether they're hams, bus drivers, doctors, politicians, gay, straight, up, down, bent, frizzy, or whatever. That you're an amateur radio operator is of little difference to this non-ham. I quite cheerfully attach the tag "asshole" to people regardless of their persuasions in life. Bigots are everywhere, in all walks of life. It doesn't mean I put up with them, but it does mean I don't look down upon groups that happen to have bigots in them.

My image of hams hasn't diminished as a result of reading this group, at least not very much, anyway. :) I guess this is proof that the Internet is, with the arrival of cheap (buh) net.access from places like AOL and Netcom, becoming infested with assholes and idiots. It's symptomatic, I think, of a greater problem, but that is better left to historians to document.

Non-ham,

Lately, it seems that just about *every* newsgroup I read has at least
one "village idiot" in it. If no-one responds to these guys, they
usually tend to take their ball and bat and go home (or monkey
around
in some other newsgroup for a while. . ..)

Sorry to disappoint you, but every newsgroup on USENET has this to
some degree. Should I decide not to purchase an IBM clone because of
the name calling in the Linux newsgroups?

>The namecalling regarding the Lambada ARC sets a horrible example for all
>of us. Were I to make a public posting critical of affirmative action, I
>would not use epithets like "nigger" or "spic"; if I were to make a public

>And yet how many times in this newsgroup have ugly words like "faggot" or
>"queer" have been used to condemn a tiny gay ARC?

You have to consider the source. Most people in this newsgroup have long
since discounted Spew's postings as nonsense flamebait. Also, there is
always some percentage of society that is intolerant of a particular
viewpoint. Thus, why should amateur radio, which represents a cross-
section of americana, be any different in this respect? To think otherwise
would be to believe that somehow amateur radio operators are a
statistical abberation.

I really don't recommend an HT for your first rig. HT's are good for public service events and some portable work. If this is what you are interested in, then the HT may be a good choice.

If you are planning on using it for Mobile, or home use, I would highly recommend buying a mobile rig. Get a good mobile, put an external antenna on your car and house, and a slide in mount.

HT's in a car, are typically a frustration to the repeater users at the best, and plain dangerous at the worst. With all the cables and the size of the knobs and displays an HT is a hazard in traffic. For base and packet use, a mobile unit with a good antenna and power supply is much nicer.

My dream has always been, an HT, that you remove the battery, and plug into the docking unit which has a large display and knobs, and a 50 watt amp. With this, you could use the HT when you needed it, but use it as the base system most of the time.

This is just my opinion, but think about what you will use the radio for before you buy it. If your funds are limited, I would buy the mobile.

> "jail". "Jail" is a term for cops and movie buffs, or those who do County
> time, asshole.

For someone who said they would not EVER send me a message why is it you
have sent me three more? I use the terms you understand.

> You lucked out this time, Burt. I know you don't know it yet, but this time
> you opened your yap, and you caught the real thing. Oh, and what I got, I
> got. I would also never hurt a defenseless person like you Burt. I just want
> to see the look on your face when you realize who I am. See ya around, sport.

Are you big and tough? It is possible. But since you say one thing and
do another it is more likely that you are more like the Wizard of Oz.
You are not the first "real thing" I have caught. If in fact you are the
real thing. The other "real things" were not hams so there was a
legitimate concern, however 100% of hams that have claimed to be tough
have yet to follow through.

Now if you tell me you were or are a U.S. Marine (and it is true) you will get my concern.

There was a day when I was defenseless and a wimp. But I found out that bullies rarely stand up and even if they do the pain of them whipping you is no where near the pain of fearing them.

I cannot anything about you that would create a "look on my face."
If you are big, mean, tough and that would not create a "look on my face."
If you were a mouse of a man I will never know that. How fearful could I be if I post my face address and phone number on the net, be real.

You know where I live, please make my day BUT YOU WOULD NOT BE THE FIRST to knock from me pissing an internet person off. (and he was from Texas as well-he came on Labor Day).

That's probably true. They also take a position reading with a
mechanical chronometer and sextant twice a day despite all of the
digital comm. and positioning systems they have. In the event of
a major electrical failure on the ship, manual means of communication
and navigation are still practiced often.

Only slightly off topic, this time...

I was crusing through the FCC web site, and came across a
list of Commercial license grades and tests. They have a
directory where you can down-load the written questions,
but the files element5.exe and element6.exe (self extracting
zip's) are not there. Are they being updated? Secret?
Somewhere else? Or just no longer in use? This is
not critical, I was just curious what kinds of knowledge is
required for those professions. Sections 5 & 6 are part of the
T-[123] test for Commercial RadioTelegraph operators.

Reference page that describes requirements for each level:
http://www.fcc.gov/wtb/colems.html#ELEM

ftp? directory that lacks the two elements 5 and element 6.

_/ _/_/ _/_/ _/ _/ _/ _/ _/
_/ _/ _/ _/_/_/ _/ _/ _/ _/
-
Here is a summary of news items covered on edition #201 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 7-Feb:
-
1. ARRL Asks Comments on Dramatic Restructuring of Amateur Radio
2. New United Kingdom Record Set on 24 GHz, 5 km Shy of World Mark
3. Several Amateur Satellites Celebrate Seventh Birthdays
4. Researchers Develop "Cool Chips"
5. Finland Best Connected Country, More per Capita Internet Users
6. Weekly Propagation Forecast
7. "The RAIN Dial-up" from Chicago
8. Heard Island DXpedition Sets QSO Record, QRT Two Days Early
9. Special Event Station Calendar
10. KC5HBR Gets Permission for MIREX School Contacts
11. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
-
Funding for the program's transmission and production expense was
provided this week by a grant from Jack Halem, KA6DLX, of Corona,
California, where "This Week in Amateur Radio" is heard Wednesdays
at 7:30 PM on the KA6DLX repeater, on 146.265 MHz, serving portions
San Bernardino, Riverside, Orange, and Los Angeles Counties.
Presentation of "The RAIN Dial-up" has been made possible by a grant
from Bill Brynteson, N0TWP, of Mounds View, Minnesota.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EST) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier. On the Internet,
audio is available each Sunday in 8-bit .WAV file format, sampled at
11.025 kHz, at http://www.intrlink.com/~sparky/wb4qoj/wb4qoj.htm
through the courtesy of the Blue Ridge Video and Digital Society of
Roanoke, VA. The service is carried on VHF/UHF repeaters throughout
North America and on 160 meters at 1860 kHz. Contact your local
```

amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (email sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

Hello Dave. The standards for Military Technical Manuals, Specifications for Commercial Electronics (IEEE, ANSI, etc) and the GPO (Government Printing Office) Style Guide -- all have M as Mega and m as milli. Units that were derived from peoples names -- Hertz, Ampere, Volt, Bel, Watt are all initial caps. Note that kilo is k (lower case) as the use for K is assigned to degrees Kelvin.

It is very well standardized and defined -- folks just get a little loose with the use.

Hi Mike - My Oxford (ugh) dictionary says "Bigot - A hypocrite. A superstitious person. A person obstinately and unreasonably wedded to some creed, opinion, or party, and intolerant towards others."

Now, there are certain groups of people in this society whose actions I detest: Child molesters, wife abusers, murderers, drug dealers, drunken drivers (Burt falls in this catagory), "gang-bangers", et al. That I am intolerant of these folks makes me a bigot. Is that bad?

Funny, I listened in on my bible thumping neighbors and you should here
they TALK about, you know bombing abotion clinics and the like.

>The fags world is full of drugs, alcohol and mental illness. (Not that
>this
>isn't happening in straight society. But there seems to be an
>OVERWHELMING problem inside the gay community)

The world in general has that problem, so what's your point?

>The definition of monogamous to a fag means being able to hold on to
>one partner for A FEW WEEKS!

Hmmmm... this is true in other spheres as well.

>They also LOVE young children! This was the MOST DISGUSTING
>thing to listen to! And I wish EVERYONE had an opportunity to hear
>what these bastards want to do to your kids!

Actually I don't know if that's true. Most of the child molesters caught
in this area tend to be of the heterosexual variety. And again you're
making a generalization based upon what you've heard listening to one
household of gay people. I meant to ask, if these phone calls were so
enthralling to you why didn't you record it, digitize it and put it up
on the net for us all to hear?

>Again....if you fags want to use assholes as a vagina.....
>how come God didn't make your asshole self-lubricating just like a
>vagina? Huh?????

Actually the anus does have some lubrication lest how would you pass a log? :)
And most hams don't seem to have any trouble with that, ever see what
the average ham eats? As a radio amateur I could really care who I'm speaking
to and if the subject gets offensive I have a VFO and a power switch. You
have the same.

> One would hope so. The FCC mandate to move to VNBFM is ill considered.

The FCC did not mandate a move to VNBFM ... all they said was "here's
the allowable channel bandwidth, stay inside of here" ... they did mandate
4800bps in a 6.25kHz channel for data ... but allow a 12.5kHz bandwidth per
voice channel until 2005 ... the FM mobile radio houses have chosen to
turn down the deviation and pull in the skirts ... not that that's a good
choice at all, as you point out, but they've been stonewalling narrowband
for over a decade ... we could have gone to 5kHz channel spacing over
10 years ago, were it not for the dominant manufacturers ...

Interesting definition. Bigotry, or more appropriately, ethnocentrism,
is a instinctive behaviour in humans -- it begins right at birth when
children have a small circle of acceptance.

I fail to understand, though, how this equates with being a hypocrite,
at least in the Oxford definition.

>That I am intolerant of these folks makes me a bigot. Is that bad?

Nope, just exercising those inbred instincts that make us cautious
of things that are different from ourselves. Sometimes rightfully
so.

Interesting things, these statistics.

What they don't tell you is many of those cases, which skew the numbers
so much towards the "het" side, is that "het" sex includes anal intercourse,
practiced heavily in African cultures as a means of birth control. As
everyone knows, AIDS is very widespread in Africa, and anal intercourse
is a signficant factor in transmission.

The problem I have with Gay and Lesbian(and other groups who practice
un-natural sex) groups is,they claim to be a minority!ALL other members
of 'genuine' minorities are such due to genetic makeup.They dont have a
choice!Gays do!!!Their alternative is abstinence!

Just to make sure I didn't catch the 'ol boys on a bad night yesterday, I'll try this one more time. My receiver's set on 3894.5Mhz and will remain there for the duration of the evening. Periodic updates will follow throughout the evening.

5:32pm EDT, 2/1//97, 3894.5Mhz, Near Orlando, Florida

Frequency is relatively quiet. Only one station heard. Unidentified, but playing some sort of music...which, in addition to being illegal, also sounds terrible in USB mode. Has been transmitting continuously for approximately the past 10 minutes.

Message-ID: <32F3E9C8.440A@granite.pste.tec.nh.us>
Source record: 205683

I have just started using news groups. I was hoping to find some useful information on the various areas of interest. As a Ham, I would think that the etiquette that we must maintain on the air would carry over into the rest of our activities. This doesn't appear to be the case. Evidently, all of the negativity gets released here, which is certainly not the place for it. As far as I know, again, I am new to this, this is a Ham Radio news group. So far I have read more about LAMBDA and some guy named Burt, than I have about Ham Radio. Stop the flaming and post something useful, please!

Sorry to waste a message on an irrelevant subject. I do have useful information, but it belongs over in rec.radio.amatuer.equipment.

Hi,
Name here is Gerry (WD4BIS) and I have been writing a column for our club newsletter called "New Ham Partner". With the influx of No Code Technicians on the repeater, asking the same kinds of questions I asked 20 years ago, I have been trying to answer them.
Some of the articles are technical, some of them are general information, but they all address subjects that our new friends are struggling with.

I have set up a web page for these articles. On this page, I will place the columns I have already published in past issues of our newsletter. Doing this on a web page has advantages, the big one being that the articles wont expire in a newsgroup, I can edit old ones or add new columns as write them, and I wont have to send re-posts.

The Cost... I will ask that you do not edit the articles, and use my by-line. If you use them, send me an E-mail and let me know when and where. If you have a spare stamp mail me a copy of your newsletter to the address on the page.

Where... http://web2.airmail.net/gerryc/newham.html

Please bear in mind that I am still adding tham as I do them

Copyright and Editorial Notice
==========

Last Revised: 6/1/96

Amateur Radio Newsline is a weekly audio service produced by
Newsline, a service of the Westlink Radio Network. Editorial
comment, news items and all other business should be directed to
Bill Pasternak, WA6ITF, Newsline's Producer and Editor-In-Chief.
E-Mail - 3241437@mcimail.com or BILLWA6ITF@aol.com
Phone/Fax - +1 805 296-7180
Fax senders should wait for voice prompt, then press start.

The transcribed version is produced by Dale Cary, WD0AKO
from materials provided by Newsline. and is jointly distributed
to online services and bulletin board networks by Steve Coletti
and Dale Cary.

All others are asked to not post Newsline to any BBS or
network without the permission of Steve Coletti. There have been
distribution problems with many of these networks recently and
posting Newsline to an echoed conference because you haven't seen
it there doesn't mean it hasn't already been seen elsewhere.
Reposting causes wasted bandwidth and additional telephone
charges to be incoured by the sysops of these volunteer networks.

The copyright owner of The Amateur Radio Newsline is Newsline.
Permission to reuse all or part of either this written, or the audio
form requires that the item be taken in it's entirety, not be subject
to any further editing or commentary, and that full credit is given to
Newsline as the source.

Permission is granted to all amateurs who want to transmit the
audio version in it's entirety over nets or repeaters. The text
version may be used for packet distribution as long as it is sent in
its entirety and the BIN header is kept intact.

NOTICE: When Newsline is transmitted in it's full form over voice
or digital forms of Amateur Radio, it is recommended that the closed
circut advisory be deleted. Audio, Computer, and Packet
retransmissions must be made without the editing or deleting of any
other part of the Newsline content. Unauthorized additional
commentary to the original message is also prohibited. To do so is a
violation of copyright and subjects the initiator to legal action by
Newsline.

Newsline may also be excerpted for code practice transmissions,
and may be used as a reference source in bulletin board discussions
under acceptable Fair Use practices.

Any other use is not allowed without the expressed permission of
Newsline.

> >charges us to "contribute to the advancement of the radio art" and then
> >the rest of Part 97 turns around and places restrictions on our ability
> >to do that.

He's right ... the occupied bandwidth restrictions and restrictions on
modulation and coding techniques are totally unnecessary and are
counter-productive ... all they need to specify is max power limits and
limits on out-of-band emissions levels. Anything else should be a
"don't care" ...

> >His feeling of how Part 97 should read is -- "Here's your band limits.
> >Have a nice day." He said in his speech that he thinks we could fit
> >the whole of Part 97 on this side of this three by five card in large

> >Obviously that is overstatement to make a point, but you get the idea.

I don't see that it's really a gross overstatement at all ...

> >Leaving all the "code testing is good/code testing is bad" arguments
> >aside for this thread, what are your feelings on Lyle's speech?

I promise not to mention the subject ... the instant subject is important
in its own right, so I'll respect your request ...

> I think he hit the nail squarely on the head.

Me, too ...

> >Should we trash all our current band plans, and say "let the best mode
> >win"?

Not exactly ... but we should not, for example, allow the incumbent
operators
of repeaters, for example, which use a duplex pair of channels 25 or so kHz
wide,
to effectively preclude the use of the same spectrum by a non-intefering
overlay

of spread spectrum ... especially when the repeater is silent for major portions
of the day ... that is not good spectrum utilization or good spectrum management.
But the incumbents will scream like gut-shot pigs at the prospect that they might
get an ocasional "kerchunk" from a frequency hopper (with the repeater running
carrier squelch with a hair-trigger, of course)

> No, and I don't think Lyle was precisely advocating that either. What I
> take him to be saying is that *government mandated* band plans are a strait
> jacket we should ask to be eliminated. Part 97 and government rulemaking
> proceedings are not the place to manage amateur spectrum utilization in
> an era of rapid technological change. We need a much more flexible, and
> much quicker, method of allocating our resources among many interests.

I agree ... it takes too damned long to get anything done by the government
and we need to be able to adjust to changing times more flexibly. This will
also be resisted by many incumbent hams ... who want to maintain the status
quo (in all respects ... I didn't say the "c-word")

> >Would that encourage technological innovation? Or just foster a "QRO
> >war"?
>
> If rigid spectrum allocations, and rigid emission limits, are removed,
> I would expect this to foster technological innovation. I would also
> expect QRO wars by fringe elements among the users of older technologies.

> the sorts of technologies Lyle is advocating is extreme resistance to
> jamming and lack of need to run high power. The would be jammers would
> thrash a lot, but they would accomplish very little.

This would be a LOT of fun ... to see the olde fartz burn out their finals trying
(unsuccessfully) to jam some frequency hopper running a watt or two ... maybe
then they'd be forced to conceed that modern technologies ARE more effective.

> >Would we then REALLY learn how to best share our assigned spectrum, or
> >would chaos rule?
>
> I would expect both. The strong technologies would work, while causing
> little disruption to mannerly users of older technologies. The fringe
> elements among users of older technologies would cause problems for
> *each other* in their attempts to disrupt the more modern systems.

Again, this would be fun for the early adopters to watch. However, I am not

at all convinced that only the "fringe elements" would be participating in the
QRO wars ... I honestly believe that a much higher percentage of current OT hams than you might expect would turn out to be "closet fringers" in this regard ...

> That would likely motivate users of older technologies who are primarily
> interested in successful communications to switch to the newer methods.
> Over time, I'd expect a general migration to the newer methods, with
> the resulting benefits of better spectral utilization, just as most
> AMers eventually switched to SSB.

It is unfortunate that the (polite, orderly, non-jammer) users of older technologies will likely be subjected to the abuses of their fringe-element peers for a period of time ... however this is NOT in any way the fault of the
new technologies, just an unfortunate consequence of the bad behavior of their peers in their attempts to irrationally impede the inevitable, and should
NOT be used as an excuse to postpone that inevitable ... the Civil War was an unpleasant event with numerous casualties and nastiness, but its occurance
and outcome were inevitable and unavoidable too and the outcome was for the best in the long run. (Though some southerners will dispute that to this day,
just as some olde fartz will never accept progress.)

Lyle sad a lot of important things in his address ... too bad so many hams are
too closed minded to listen ...

Well, it's been fun. I found out what I needed to know, and will not be posting here anymore. I enjoyed the "game", but enough is enough. Actually, this all started because of a 4' 9" blind guy with a nasty sense of what is (and is not) decent behavior. I had to hear about it from two of the most prominant hams in amateur radio, and then had to see for myself.

Sure enough. There it was, with additional "promos" from a couple of misled guys, who seem to think they know what they're talking about. This is a total waste of time and effort, but it did do some good. Because of this, it is very possible that the section which governs ARRL elections may be changed. It needs to be, so that people who are not fit to serve find it difficult to get around rules that make it impossible to lie, cheat, or steal someone else's ideas.

Y'all have fun without me. That includes you, Burt!

So you know some people who build (QRP CW) HF rigs ... fine.
That does not mean that there is not designing and building going
on at VHF/UHF and above ...

I believe it was Gary that pointed out that it would appear that VHF/UHF FM
kits outsell HF QRP CW kits by a substantial margin ...

> Perhaps, perhaps not. However, I see this as a separate question. Carl
> has claimed repeatedly that the CW operators are not interested in

> in my realm of experience and seems false in general, given the
> responses I've seen here.

I said that many, perhaps a majority of, dedicated beepers are more
interested
in rag-chewing, contesting, and collecting wallpaper than in building.

Far too many SSB-only hams are the same ... perhaps even more of them
are appliance operators who don't build or even really know how their rigs
work,.

sci.astro has been ruined mostly by totally off-topic stuff like alien
invasions,
"Comet Hale-Bopp is an alien spaceship", and creationist_vs_evolutionist
flame
wars ... that's hardly "infighting" amongst the astronomers (I am fed up
with
the flakes on sci.astro, too ... I am a moderately serious about amateur
astronomy
and recently purchased a 12" SCT ...)

2509. 3894.5 (A Perfect Example of How Well the CW 'Lid Filter" Works)

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-01 00:00:00 UTC
From: mnmaniac@aol.com
Message-ID: <19970201015001.UAA17791@ladder01.news.aol.com>
Source record: 205838

It's been awhile since I visited "the zoo", so I decided to tune my receiver to 3894.5 tonight and see how well the Morse code requirements are working on HF these days. The Beepers say CW keeps the riff-raff out, so I figured I'd check for myself. Here's what I'm hearing:

8:44pm EDT, 1/31/97, 8:44pm EDT, Near Orlando, Florida

Two unidentified stations spewing profanities at each other
One unidentified station playing Barry Mc Guire's "Eve of Distruction"
One unidentified station playing an endless loop of a human voice laughing.
One unidentified station playing a noisemaker of unknown origin.

Yep. That Morse requirement really keeps 'em on the straight and narrow, doesn't it?

> "don't care" ...

In the Land Mobile world now you can not get a FCC Type Accpetance for a new FM trnasceiver unless it operates on a 12.5 khz bandwidth. This means it must have filters that ,imit the radio to the narrower bandwidth and the maximum deviation will be 2.5 kHz, in 2003 or 2005 the frequencies will splinter again down to 6.25 kHz with max deviation limits at 1.5 khz. The amateurs willl be behind using wideband FM with filters set to 15 Khz and using 5 khz deviation.

I think digital audio or modulation and frequency hoppers are the way to go in the future. Business radio is headed that way shortly.

Gary

|"M" is the abbreviation for Mega and "m" for milli. "Hz" is the abbreviation
|for hertz. ... So 10^6 hertz is correctly abbreviated
|MHz.

On the other hand, in most application involving radio, at any rate, a
millihertz is a pretti silli unit. I don't think there's ever any question
what's meant if someone uses "mHz" or more likely "mhz" for "MHz".

Not so much that they are attempting to sell off the 2m & 70cm bands as much as there are more and more lids on the air now than there have ever been. Admittedly, I started out with a no-code license. That got me in, but I wanted more. To do that, I had to learn code and even though right now I only have a tech-plus license, I still learned the code and am trying to learn it more and more. I want my General ticket, but I'm not going to get it without lots of code practice and that's something I have to deal with.

As far as getting more people involved with Amateur Radio, that's fine. But we need to be sure that the people we bring into our group are going to be able to either add to it or at least hold the line. For no reason should we allow those who don't have a love for the hobby to join. If they just want to vent their frustrations at the world in general, let them use CB. But if they want to become contributing members of a growing society with a love of radio as its common ground, then welcome them, and HELP THEM get involved. That is the best way I can think of to continue a long heritage of well-educated and well-rounded amateur radio enthusiasts.

Thanks for your time,
Joe Denison

One would hope so. The FCC mandate to move to VNBFM is ill considered.
The benefit of FM modulation is due to using a modulation index greater
than 1. This is what gives us the FM enhancement effect. At modulation
indexes of less than 1, we get a corresponding FM deficit effect. At
a modulation index of 1, FM is roughly equivalent to AM in performance,
though with a considerable freedom from impulse noise thanks to limiting.

It is incorrect to say that amateurs use wideband FM. WBFM is used by
FM broadcasters (and for good reason, that service demands a very high
effective SNR). Amateurs, and currently land mobile, use NBFM. What the
FCC is mandating for land mobile is VNBFM. This will cause a stark
reduction in performance which will make the land mobile users very
unhappy due to the FM deficit effect.

FM modulation can be considered a very crude form of spread spectrum,
using the modulation index as the spreading function. The process gain
obtained from despreading the signal is what gives us the FM enhancement
effect. It is very crude because the modulation index is dependent on
the modulation, and thus not a priori predictable at the receiver. This
leads to the FM threshold effect. SS uses an a priori known spreading
function which eliminates the bothersome threshold and allows signals
to still experience process gain at weaker signal levels. It also
allows signals occupying the same spectral area to be separated from
each other due to the differing spreading sequences.

There is a way out. If land mobile switches to low rate digital speech coding, probably using LPC, coding gain can substitute for the process gain of FM and allow VNBFM signals to equal NBFM signals in performance. The speech doesn't sound very natural, but communications effectiveness remains high. However, the FCC mandate is ill concieved for another reason besides reduced user station performance. It offers a 2x, and ultimately 4x, increase in band capacity by splintering the existing channels, but it leaves land mobile stuck with fixed channelization and the potential problems with severe co-channel interference that force rigid frequency coordination. These latter two factors are the *major* causes of apparent spectrum overcrowding in the land mobile service (and in the amateur service).

The problem is that channels, and the associated strict frequency coordination they require, represent *warehousing* of spectrum. Channel usage has a high peak to average ratio, IE the channel is frequently sitting idle waiting for a user to transmit, and is effectively idle between syllables. In land mobile service, the peak to average ratio is frequently in excess of 10:1. That means the spectrum usage efficiency is at best only 10%. Amateur spectrum usage is often even worse, with a peak to average ratio of 20:1 or more. At least land mobile has attempted to partially address this problem through trunking, but that is a limited answer, and one which is ill-suited to amateur practice.

There is an answer to this problem. It is called spread spectrum. It eliminates spectrum warehousing by utilizing *all* of the band for each and every transmission, via CDMA. This raises the peak to average ratio to nearly 1:1 and increases band utilization efficiency to near 100%. Fixed channelization is no longer required, and strict frequency coordination becomes an obsolete concept.

As an aside, the FCC has foisted frequency coordination off to private parties in both land mobile and the amateur service in an effort to reduce staff workload. But it still represents a high cost to users, both directly in terms of fees (in the case of land mobile), and indirectly in a loss of flexibility of operation. It also costs the community strongly in terms of inefficient allocation of spectrum resources. Frequency coordination is something we should seek to avoid for these reasons, and SS lets us do that.

Instead of a 2x or 4x increase in spectrum utilization, SS allows us to achieve a 10x to 20x increase in spectrum utilization. With automatic power control, an even further increase in spectrum utilization can be achieved thanks to greater spectral reuse. And cases of *severe* interference are virtually eliminated. Instead we see a gradual and graceful degradation of effective SNR as band loading increases. And automatic power control helps mitigate even that.

Another major benefit of SS is that it is largely compatible with traditional channelized modulations. Since a SS signal

has a very short dwell time on any given frequency, it contributes
very little signal energy to any given frequency, and thus degrades
SNR for other users of the frequency very little. And conversely,
it receives on any given frequency for a very short time, so narrow
modulations contribute very little signal energy to it and degrade
its effective SNR only slightly as well. This means that SS can be
introduced gradually rather than forcing a wholesale changeover
from one modulation method to another. This has obvious transitional
benefits, spreading the cost of conversion over a much longer time
for the entire user community.

To get the benefit of SS, we obviously need to embrace SS and
start adopting SS on a large scale. That can't happen if regulations
prohibit it or make it unnecessarily unwieldy to employ. In particular,
manufacturers of amateur equipment will not produce SS equipment
if there isn't a solid regulatory permission to do so. A temporary
STA doesn't help. We need permanent rules which embrace SS as a
normal method of operation. The same can be said for virtually
any non-traditional modulation form. Detailed emission restrictions
in Part 97 very strongly discourage adoption of newer, and possibly
better, methods in the amateur service.

Amateur radio is supposed to be an experimental service, contributing
to advancing the communications SOTA. We can't do that if we are
hamstrung by excess regulation. We have an opportunity to lead
commercial practice by serving as a large scale field test of newer
methods such as SS. In essence, that's what we are *for* as a radio
service. We can't do that if Part 97 unnecessarily restricts us from
doing so.

I want to make one point *very* clear. Our contributions to advancing
the SOTA don't rest solely on homebrew activities or on bench tests.
Our major contribution is in the area of large scale field testing.
We are useful in showing how techniques work in real world situations
facing real world conditions, including the presence of large numbers
of other users using the same or different techniques. We did that
with little LEO satellites, we've done it to a degree with packet,
and we should be doing it with SS. We shouldn't limit our field
testing to just VHF+ either. We should also take advantage of the
propagation characteristics of HF to try novel techniques there
too. We can't effectively do any of that if we are hamstrung by
excessive regulations, however. Lyle Johnson is exactly right.
Part 97 should just say, "Here are the band edges, stay inside
them, and have a nice day."

Gary

>unhappy due to the FM deficit effect.

yes the users will see a deficit effect in operational distance
covered. THOUGH Europe had been using 7 kHz receiver bandwidths and
2.5 kHz deviation for years now. Once the Land mobile splinters
further down to 1.5 kHz deviation in about 6 years, then the
modulation will no longer be FM, but likely some form of digital
modulation. Then the receiver can regain the fidelity and operational
distance should be recovered. ICOM is hitting the market with dual
mode Land Mobile radios right now. You can software select the

operational bandwidth between 15 kHz or 12.5 kHz per channel while programming the radio. As the 12.5 kHz bandwidth catches on and Land mobile users find out they and now have 2 frequencies by splitting there assigned frequency you will see more 12.5 kHz radios appear in use.

The splintering of the Land Mobile bands is in hope users will releive there own overcrowding troubles. Now a holder of a UHF license can split it in two and use the 12.5 kHz bandwidth radios. The problem will arise for the poor person who is still using the wider bandwidth 15 khz radios, he will experience interference from the 12.5 kHz radio. And the 12.5 kHz radio will not be bothered form the 15 kHz radio at all. Time by Time as users change out the radios the new narrower band radios will be purchased, so in a few years everybody can operate on twice as many of Land Mobile channels as are available now. Maybe the splintering of Land Mobile service will take the pressure off of 144 and 440 MHz bands.

back to the 1970's format of "QST devoted entirely to AMATEUR RADIO".
It'll still
be covered up by the other mags in front of it. but it might not hurt to
tune it a bit to get the opportunity for max bang.

CQ is using a large "Amateur Radio" across the top of the cover.

but i was thinking more along the lines of reference books like the arrl
handbook (geez, i still like the name "the radio amateur's handbook"
better..) and now you're talking (maybe starting at the next iteration
when they add in the rf field emission tests) and such.

you go to a bookstore, and there's not much on radio and electronics in
the first place, but if nothing else, maybe a deal would be worked with
the ARRL (and other publishers) drop shipping to a customer who places
the order at the local bookstore (maybe even radio shack?)...cross
pollinate with info in the ads... the only problem is if there's enough
profit for the bookstores to take orders...

they probably will. may i suggest running searches on the various usenet
indexes
to get references to news postings on this subject?

> LAMDA threatened to sue the ARRL based on a Connecticut law that prohibits

it's "lambda".

> discrimination based on sexual preference. All of this started because LAMDAs

well, they'd run ads from Lambda before. if one was "late", i'd be
surprised.

> monthly ad wasn't placed/paid for before the publication deadline. Like any
> other ad, if the publisher doesn't receive it in time, it doesn't get
> published. From what I understand, LAMDA thought that the ARRL was being
> discriminatory against them and threatened to sue under the Connecticut law.

the problem was that the ad was rejected (after being run before) and
some
statements made about how QST didn't run ads for individual clubs etc.

> The ARRL had to make acommodations before publishing QST. Like I said, I don't
> know all of the details, so maybe someone could enlighten us all.

probably everything's on file that was posted to news groups, and
there's places like Genie that have their archives of message traffic on
the subject (that's
page 345, menu option 2 to get into the library for the radio and
electronics RT).

> see an HF vertical or dipole."

Antenna restrictions affect all of us. Yes, I'm a no-code tech. I'm active in the weak signal portion of the bands above 50mhz.

It's a bear operating out of an apartment. Luckilly I have a huge balcony on the second floor. I can manage to have several small beams on the air. But still, I'd like to put up two 17 element two meter antennas.

The decreasing amount of amateurs on the HF bands has many causes.

1. Repeaters(personally I avoid them) - It's real easy to keep in touch with your friends, and get to know others in your area. Heck, with the big linked repeater networks, you can even get out of your own state. There is no desire to spend alot on HF equipment, when your $200 radio shack handi talkie works fine for you.

2. Economy - That was kind of touched on with repeaters. Homebrewing equipment just isn't as common as it once was. The only band I've managed to find any experience, in my area, building your own equipment has been in the gigahertz area. Heck, I'd like to build some small radios myself, the experience just isn't out there any more. Go to swap meets and look at all the over-priced TS-820's and such. You always see these radios going home. Most of their owners don't particularly care whether they sell or not. Face it, this hobby is getting more and more expensive. You have to be a professional to really get into this hobby.

3. Code requirements - This is really an overstated excuse for someone not being on HF. Really code can be usefull on all bands. I'm slowly learning code to help with with weak signal work on the vhf+ bands. I really have no interest in HF.

4. There's more to ham radio than HF - The interests in amateur radio are really spread out and varied now. There's packet, satellites, repeaters, weak-signal, eme, microwaves, etc... Everything seems to

have been done already on HF. The contacts have been made all over the world. All that's needed on HF is an active station in that country and you've made contact. We are still pioneers, albeit small pioneers. There's still new things to do on the bands above 50mhz. Heck, there still hasn't been a contact from Arizona to Hawaii(I think it might be possible).

Take a look at the ENTIRE amateur radio community. We're a motley crew. We have interests in all kinds of aspects. Some rag-chew, some experiment and never talk.

Maybe loosening code requirements is enough to get hams into HF. Maybe just one code speed requirement and then technical testing to advance through HF will help. Maybe opening up an area of HF to no-code tech's will wet their appetite for more.

Maybe the next sunspot cycle will re-kindle interest in the HF bands.

Maybe the two meter repeater crowd will get bored and look into HF. I doubt that, most folks I've met that got bored with FM, got out of ham radio all together.

There's some thoughts and some "maybe"'s. If you want to re-populate the HF portion of our bands, you're going to have to market it to the rest of the amateur community, like you would market an old product. Somehow make it "NEW & IMPROVED".

We're just a bunch of lazy americans;-) It's usually used as megahertz.

What the heck is a millihertz anyways.

What's this thing with UK and "million" and "billion" too?
Million in U.S. is = 1,000,000
Billion in U.S. is = 1,000,000,000

We could go on...
earth vs. ground/common
aerial vs. antenna
football vs. football

Man, you should read some of the "english" manuals from Russia I've read.
A "Longitudinal Trapezoidal Mounting Bracket", that's a dovetail mount.

Our "english" get's worse on the internet too. We tend to be in a hurry
to type our message and get the computer off the phone line. One usually
gets that from people that have to pay by the minute.

Oh Oh, I'm starting to babble. I'd better get on the radio. I'm in the mood
to rag-chew.

Your logic is unimpressive, to put it mildly. Making an obsolete,
albeit enjoyable to a few, activity a requirement for licensing simply
makes no sense. I like to chug beer. Should this be a requirement for
HF privileges too?

The Morse Code requirement is killing our hobby by starving it of new
blood. The ham bands sound like a geriatric ward. No one nowadays is
signing up to be a ham, and the statistics, reported by newsline, bear
this out. It is just tragic.

My point, which you utterly failed to grasp, is that morse is little
better than smoke signalling nowadays. I'll bet Morse Code hasn't been
used in disaster communications in decades. Ships are abandoning it,
the military and Coast Guard have already abandoned it, only we hams
care about it. Nothing wrong with that, but it is nuts to keep it
around as a *requirement* as opposed to just one more part of the hobby,
and one with no practical use outside of pure recreation at that.

Idiots!!!!!!! (note the capitalized I)
With the exception of Roy all of you who responded toDave Parkins should just be allowed to receive and not send. Of course there is a difference between m and M. Do you know anything about standards? There is only one correct way to abbreviate megahertz and that is with the big one not the small one.

BTW the reason they went away from Mc (note the capital) was that the correct unit was cycles per second so the abbreviation should have been Mcps. It was easier to honor Mr. Hertz than to write out the cps. Therefore one Hertz=one cycle per second.

In all reality the bible is full of contradictions. I think I saw a post one time that read "There are 350+ admonitions to heterosexuals yet only n to homosexuals in the bible." and then it went on to say that heterosexuals weren't necessarily bad people but that they needed much more supervision. I found it amusing.

Having read the Bible I find I much prefer the Old Testament when God had Balls vs. the New Testament when they tried to sugarcoat God.

> to some creed, opinion, or party, and intolerant towards others."

That's not the exact definition I had mind, but it's close enough
that I won't quibble with it.

> Now, there are certain groups of people in this society whose actions
> I detest: Child molesters, wife abusers, murderers, drug dealers,
> drunken drivers (Burt falls in this catagory), "gang-bangers", et al.
> That I am intolerant of these folks makes me a bigot. Is that bad?

Re-read the definition that you just quoted, especially the
"unreasonable" part. If you can form a _reasonable_ argument against
certain individuals, then the OED definition would appear to exclude
that argument from being bigoted.

Trouble is, I have yet to see a homophobe who can form a consistant
argument for his beliefs that is both (a) logical, and (b) factual.
When their assumptions are questioned, any interest in reason
evaporates and is replaced by a variation on the theme "That doesn't
matter. They're *icky*. I want them to be oppressed."

If it looks like bigotry, and quacks like bigotry, and waddles like
bigotry, chances are it's bigotry.

> radio club?"

You left out what is, alas, perhaps the biggest reason of all:
bigotry.

Just look at the following assortment of quotes, all saved by me in the
past few days off this group, including some by an ARRL section
manager:

-> No, what it is sir, is a self-perpetuating pool of available sex
-> partners. That is the only reason faggots require acceptance in
-> society! The process of natural selection does not apply to faggots,
-> so they must gather in 'groups' in order to find partners of thier
-> specific preference. Sex has nothing to do with ham radio except the
-> creation of new hams, and the traits of faggots tend not to create
-> much more than a mess.
-
-> There is no such thing as a 'positive' gay role model. Being gay is in
-> and of itself a wrong and negative choice. That's right, choice. You
-
-> P.s. Hey! Maybe we could get the government in on this too! Yeah! We
-> could have the Surgeon General tatoo warning lables on the asses of
-> every faggot so that the risks of this type of activity will be known.
-> You know, like on cigarrettes. Just a thought, since they don't seem
-> to get information by any other means.
-
-> The big one is the official Lambda GAY award (Got AIDS Yet?)
-
-> EHHHHH (BUZZER) ... WRONG ANSWER! THE SURVEY SAYS .... ZERO!
-> DOES NOT HOLD WATER. BY YOUR LOGIC, WE SHOULD HAVE NAZI ARC, KKK ARC, GAY
-> BASHERS ARC, HATE MONGERS ARC, DEVIL WORSHIPERS ARC (GETTING THE POINT
-> YET?).... HOW ABOUT THE S&M A.R.C. (HEY, Y'ALL OUGHT TO LOVE THAT ONE, HAR
-> HAR). WHERE DOES YOUR RIGHT TO EXPRESS WHO YOU ARE END, AND MY RIGHT NOT
-> TO HAVE TO LISTEN TO IT?
-
-> YOUR LOGIC, SIR, IS AS PERVERSE AS YOUR LIFESTYLE. YOU ARE NOT DOING YOUR
-> CAUSE ANY GOOD AT ALL, AND IF I WERE YOU I WOULD RETHINK IT, AND DO SO
-> SOON. AS SECTION MANAGER OF THIS SECTION (NORTH TEXAS), I CAN NOT PROMOTE
-> THE AWARDS WHICH YOU ARE SPONSORING. IF HQ WANTS MY RESIGNATION THEY CAN
-> HAVE IT. I THINK I SPEAK FOR MOST OF OUR MEMBERSHIP WHEN I ASK YOU TO

-> PLEASE TAKE A HIKE, AND TAKE YOUR LIFESTYLE WITH YOU. 'NUFF SAID !
-
-> Yes....Arthur Ashe was an innocent victim of AIDS. But the tainted
-> blood he received came from a person who WAS NOT an innocent
-> victim and chose to live an immoral lifestyle.
-
-> But, of course, many fags and fag lovers lack common sense. They
-> can't even realize that a rectum is meant for things to come OUT of...
-> not to put things into....
-
-> This kind of immoral abhoration is not something that happened overnight.
-
-> I think fags suck.
-
-> There are blacks and asians who don't like butt humpers either. So get

Nope, there's no reason for a gay ham to feel uneasy given the
existance of such attitudes in the ham community. There's no reason
for us to want to have a club that we know will be accepting, no
siree!

Sins a long time i'm looking for a working sollution to receive and
decode the ACARS.

I have 2 different schematics and 2 different software packages. The
software is from AEA and the other from LOWE.

Some people says that the AEA software is working fine with a hamcom,
when i start the program, i see the data-indicator going on and off buth
the screen stay's empty. (ill try'd with squelch and volume settings
buth nothing works)

The LOWE needs a hardware key.

I'm thinking of bying a complete system with software and interface buth
is it going to work with my TH-79 from Kenwood (should i look for the
problem in the receiving of my Kenwood ?)
Still the litle interface from LOWE is to expencive.

MY QUESTION IS :

Are there any people out there who are working with homebrew interfaces
and what kind of software do they use with it ?
Are they welling to share the schematics and software ?
Sins there are not much people who are intrested in the ACARS system i
don't think to get lots of mail.

A SECOND HAND INTERFACE WITH SOFTWARE IS ALSO WELCOME !!

Thanks to all and ill hope my loking is going to end now :-))

William

From: Todd Ellis <lambda@vari-wave.com>
Message-ID: <32F4BA0A.6DC1@vari-wave.com>
Source record: 205618

On 2/1/97 you said:

"Things were lively again last night on "the zoo." Major participants included "Big Al" (K4OKA), KC3AU...who was described repeatedly by one of his friends as "The fake preacher from Scranton, Pennsylvania who manufactures tape recordings with which to jam his fellow amateurs." Polly was also heard with a strong signal here in Central Florida."

Hmmm...do you know KO4KM? He's supposed to be down there too somewhere. It's believed that he is the infamous "Uh-HuuuuH!" guy.

"Highlights of the evening's transmissions included an unidentified station who repeatedly said "HO HO....HO HO...HO HO...HO HO...HO HO...HO HO." When questioned as to what this was, the station responded with "It's Santa Claus, you senile old %$#@!!"

Gee, did you have to ask?

"Also worth mentioning...and this is my personal favorite...a catchy little polka tune entitled "The Stump-Jumper Song" was played repeatedly. Couldn't catch all the words (due to jamming attempts), but it mentions Big Al and amateur radio...and the chourus goes "Everybody sing along with the stump-jumper song."

The lyrics are quite catchy. I do not condone the playing of the tape, but I do like the song. It goes something like this:

StumpJumpers are here today
Stumpjumpers are here to stay
On amatuer radio...
Big Al, he's the one to call
Big Al, he's the one to call
Everybody sing along
The StumpJumper Song...
...and so on and so forth.

There has been a report that the tapes Preacher John cut were stolen. No one knows who did it, but he doesn't have them any more. In fact, he had to cut some new songs due to the loss of the tapes. It is rumored that the Opposition (WB2OTK, Rich Whitten - aka PortButt, et.al.) had something to do with the disappearance of the tapes, but that is unsubstantiated and not the opinion of this writer. One other person's opinion was that a PorkButt Suck-Up was playing the songs either stolen or recorded from the air to make the StumpJumpers look like a band of ragged illegals. I don't have any idea what is going on, but that song is also played on other frequencies across the nation. It truly is amazing. I wonder if John will be up for a Grammy this year. As an

unrelated development, Rich/PorkButt has decided to also sing along, clearly in violation of Part 97, with disgusting changes in the lyrics, substituting StumpJumpers with ButtHumpers. He is a very tiresome person. Maybe we can have the Olympics in Anderson, SC so the authorities can clean this guy's act up for himself (re an earlier article discussing '84 LA Olympics).

"Damn...this is more entertaining than "The Gong Show!"

If you didn't know, the Abernethy Radio Group (ARG) was named in honor of Big Al, K4OKA. Due to a deep discussion of how to clean up the airways and rid them of toxic waste, one person was told that if he stood on a stump and jumped from stump to stump, maybe someone would listen to him. Thus the StumpJumpers were started, and one night in December there was a charter membership on-the-air meeting. 30 members were inducted (0-29). If you'd like to belong, wait for the jamming to stop long enough, and let someone sounding sane know. The best way to combat the wombat is to simply outnumber the lids and take over. Rich/PorkButt was shunned one night a few days ago and was kicked off of nearly every net on 75 before he finally pulled the plug.

"-Drew in Sunny Central Florida- CB Radio KADF-6895 since September, 1976 Amateur Radio KF4DDM since September, 1995 Radio Personality since August, 1983 Scanner Freak since portable radios with "Police Band" were high-tech Check out my SEVENTIES Web site at http://167.142.101.43/drew/"

Well, that's some tag line. I've been a ham since 1979 and extra since 1981. I've done a few things with RF and microwave. My site is http://www.vari-wave.com/todd.htm and I don't WANT to remember the seventies!!!

I submit that the "statistics" are of somewhat questionable accuracy ...
for example,
I don't even see Len's address in there anywhere ... I would have expected
him
to be in the "top 20" ...

I resent the implication that being active in the newsgroup(s) is somehow
"bad."
We're talking about some subjects here that are very important to the
future
(even the survival) of ham radio ... code/no-code ... modernization ... the
"hobby vs. service" question ... and many others.

It seems to me that the only folks who try to squelch activity and shut
people
up are the ones who don't like what they're hearing or don't have good
arguments
to support the position(s) that they'd like to see come out winners in any
debate.
In other words, they're the would-be censors.

If *anyone* doesn't like the discussion, they can choose not to
participate.

It's *easy* to skip threads that are likely to contain content that you
find
upsetting ... just don't read them.

But no ... these people are not interested in their personal "protection"
from these
subjects or the opinions being voiced on them .. they want to control what
EVERYONE
can see, hear, or discuss ...

Baloney ...

Carl - wa6vse

Amazing. You really don't see any distinction between rec.radio subgroups. It's so clear now why you believe you're on the .policy group. That Top-40 list was for .misc.

>We're talking about some subjects here that are very important to the
>future
>(even the survival) of ham radio ... code/no-code ... modernization ... the

Policy issues belong on .policy.

There you go again - your movement to combine all the radio subgroups into a single group. 1000+ articles per day here. Wonderful.

Carl,

I have a 54 ft Crank up tower but I would imagine my experience would be even more pronounced with a 72 ft crank up. Incedentally, here in thunderstorm country, we refer to them as crank downs. If you will be cranking it down often as we do here in Texas due to high winds or the possibility of high winds, do yourself a BIG favor and get the electric wench as cranking it up is not alot of fun. It's not particularly hard, just time consumming due to the gear reduction used in the wench.

The up-side is that if you are going to put up any wire antennas for HF, having no guy wires to interact with your antennas is pretty nice.

Good luck,

Paul n5dup

Hello One and all,

Well the reason that Navies around the world use CW and flashing light is very simple. If you are out at sea and in no position to transmit any sort of radio wave, inc radar...iff..etc, then the only means of communications are flashing list and flag hoist. So you see these are still used.

The Royal Navy has done away with nearly all of the CW training in the communications branch, they have started to move over to Operator Maintainers on all of the vessels ie you use it you fix it policy.

In todays modern world there are a lot of backup communications systems to be used. If your operating around coastal waters you could even use a mobile phone, and thats not joke the military do use them from vessels. You could use Imarsat...make a ship <> shore call via a long range or local coastal radio station. The list can go on and on.

I have seen some really smart people have their whole life shattered because they could not read Morse code, its a fact that some people cant read the Morse.

Anyway enough of that. We keep on hearing about all these threats to the amateur bands around the world because we dont use HF or VHF or UHF. I wonder how many hams have gave the hobby up because they could not read cw? How many other people havnt even bothered to take the exam because they know no matter how good their technical ability is they may not have what it takes to read mores code..

Just remember that Morse code is only one many modes used by todays ham....SSTV...Packet...RTTY..
FAX...SSB...PACTOR....and what everelse people come up with.

>I wouldn't even build the thing unless I had to.

The point I was trying to make is that the idea of building a
transmitter ignores half the job, and can cause problems for
others in an emergency situation. Everyone addressing these
scenarios wants to ignore the issue of reception. And they
seem to also always ignore the issue of interfering with other
emergency communications. Your actions could put someone else
at risk. Think about that.

Sending in the blind on an ill-defined frequency is also likely
to be ineffective, so you may be creating a hazard for others
to no good purpose. I would suggest that when you think about
emergency communications you should automatically think *two-way*
communications. That means you need to think about a receiver
as well as a transmitter.

In the real world, the vast majority of emergency communications
situations are best dealt with on VHF FM, and almost all potential
emergency responders will be using FM. The limiter in most FM
receivers will make your Morse spark transmissions unintelligble.

As the Boy Scouts say, the best way to deal with any emergency
is to "Be Prepared". In most cases, that means having a portable
battery powered VHF+ FM transceiver *already* at hand. Your major
problem may then be fabricating a sufficient external antenna to

reach an emergency response station. Note that the radio doesn't have to be a commercial one. A homebrew radio is fine if you have previously tuned and tested it on the bench to ensure it operates properly.

(Carrying a pocket repair kit is also a very good idea. I have a butane powered soldering iron, a bit of solder, some wire, and a selection of chips, transistors, and capacitors in the little kit I carry. I also keep a few connectors and a bit of small diameter coax handy in the vehicle. That would go in the briefcase or another pocket if I was going to be away from the vehicle. I also make sure I'm *very* familiar with the circuitry of any radio I carry for possible emergency use.)

You can, of course, cobble together an expedient FM rig from parts from broadcast radios, but the odds of it being effective are very much less than if you already have a properly tuned transceiver because you probably won't have access to a bench full of test equipment to align and tune it. In a real emergency, you probably won't have the time to start a construction project in any event. Most emergency situations are by nature time critical. If you can't deal with problems with a simple repair, you probably ought to start thinking about other ways to extricate yourself from difficulty than depending on radio.

Even if you are very far from any potential emergency responders, and have the time to fabricate something, spark is probably the worst choice. Because the spark emission is very broad, it takes a lot of power to make it heard at great distances in most cases. Typically, it took a spark station running several kilowatts to span the distances we easily span with a few watts using a continous wave signal. So you should extend every effort to generate and receive a CW signal (not necessarily OOK Morse modulated of course, CW carriers can be modulated by AM, FM, FSK, DSB, or SSB for example, and there may be good reason to use one of those methods over OOK Morse).

Now this implies that you need to know where to tune it to get a response. And that is best addressed by a receiver. And of course you need a receiver anyway to establish two-way communications. Establishing two-way communications is vital because unless you get acknowledgement, you won't know that the information you are sending has been received correctly, IE if you're telling them where you are, a miscopied digit could send the rescue party to the antipodes instead of to your location. Ideally you'd want to use an ARQ method to ensure accurate message delivery.

Now this is a subject near and dear to my heart. Most people ignore the need for a receiver and don't think about what sort of receiver they would need. That depends very much on the modulation chosen. For OOK, FSK, DSB, or SSB you need a stable narrowband receiver with a product detector. For AM and FM,

stability and bandwidth requirements are much relaxed. The AM receiver needs a simple envelope detector and the FM receiver needs a simple discriminator. It is very much easier to cobble together an expedient receiver for AM or FM than it is for any of the other modulations, and a receiver for any of the other modulations will also serve for all of the other modulations, IE an OOK receiver is also suited to be a FSK receiver or SSB receiver.

You probably won't have unlimited power, and the ionosphere is fickle, so just sending continously is probably not an option. This is a reason you might want to choose a FSK modulation suited to weak signal operation. There are stations around the world monitoring known frequencies, and they can automatically respond and acknowledge your message. Of course you are unlikely to whip up a data controller on the spot, so this is another case where "Be Prepared" should be your motto.

If you must transmit blind, AM modulation may be your best option because there will be many more listeners on SW who are equipped to deal with that than with copying Morse. And of course if you must transmit blind on VHF, FM modulation is your best option. Both are fairly trivial to do once you have a CW carrier to work with. The carbon microphone element out of a phone handset will suffice as an AM modulator for a low power transmitter, and a FM modulator can be made with any reverse biased PN junction placed across the frequency determining element of the CW transmitter (again the carbon element from a phone set will do to drive the PN junction, or two razor blades stuck in a box and bridged with a pencil lead will do if you can't get a phone set carbon element).

You might choose to use OOK Morse, but be aware that the emergency response services no longer maintain an OOK Morse watch, so you'll be limited to attempting to attract the attention of some random Morse hobbyist who happens to be tuning the appropriate frequency when you transmit, and who then takes it upon himself to act. That could happen, but it is a thin thread on which to hang your life.

The very best way to transmit blind is with an EPRB. That'll be picked up by satellite (SARSAT), which will determine the location from doppler ranging, and a team will be sent out to investigate. If you're going to be far from civilization, having one of these emergency beacons falls under the heading of "Be Prepared".

This brings up another point. A friend of mine is an entomologist specializing in tropical insects. He was on a field trip far up the Amazon when his canoe overturned. I had talked him into carrying an EPRB, but he must have forgotten about it in the excitement. A search party in a helicopter found the canoe, and the EPRB, but my friend was nowhere to be found. He was presumed drowned. A year later, he turned up. He had wandered off after the accident and

had been living with indians in the interior. So stay put if you
think someone may respond to your calls for help, otherwise
they may come and go without finding you. (That's one of the
hardest lessons to learn in wilderness survival. It is very hard
to just sit and wait. It is also a strong argument for *two-way*
emergency communications. If you *know* help is on the way, it's
a lot easier to stay put.)

Gary

Now here is a great reply; one gross generalization for another. The real question might be, were those priests gay prior to their final vows? If so, they were never really priests in the eyes of The Lord, who would certainly be aware of their little "secret".

Here's the bottom line, OM. Not ALL priests are homosexuals, but ALL homosexuals are sodomists, and would butt whack a child in a New York second, if they had the chance.

I said I would no longer post here, but I still read the posts off line, and will reply where I think I have something I need to say. This reply is my own personal opinion, and has nothing to do with my amateur radio license. It has to do with my sense of decency in regard to the Catholic Church and ALL it represents. True, there are a few priests who need to leave the priesthood, but the Catholic Church also has many, many redeeming qualities to it, and even more they The Church has given the world. What has homosexuality given the world, in and of itself?

AIDS, child pornography (though homosexuals are not the ONLY guilty parties in this area), male prostitution, gay bars, and a bunch of liberal gibberish. That's about all I can see. Frankly, I would rather see us just drop all the talk about these guys, and move on. Until the laws are changed in regard to private organizations and foundations, we can not do very much in regard to their legal right to organize and to promote their "cause".

I say we stay the fight, and not quit the ARRL, just because they had to acquiesce to their lawyers' advice. I see no constructive purpose for their existance, in regard to promoting amateur radio, just as I would not see it for a club that promoted any other kind of sexual lifestyle. Further, I believe that it is not in the best interests of amateur radio to promote ethnicity within amateur radio, or its counterpart of any "hate group amateur radio organization". I would advise all of you to remain members, and express your views. If the Board of Directors does things you do not approve of, you can vote for the other guy next time, or even run for office yourself! On the other hand, in my mind, the LAMBDA situation is clearly not the fault of the ARRL Board, and we should not blame them for an action which they took on the advise of their attorneys. Rather, we should be looking to our states to provide moral protection, through legislation. I caution, as I did in an earlier post, that such legislation can be very dangerous. So again, I ask the quesiton: Is it all worth it, or should we just ignore them, and hope they just fade away, like a bad odor on the wind?

Just food for though, I hope.

Trees,
Enzi Tooti

No idea, but we celebrate the violent overthrow of a government that deserved
what they got. We call it "July 4th". I wonder if they view their holiday in
a similar manner.

I know it is hard for us to realize it, but "Americans" comprise about 4% of the world's population, and Christians maybe 25% or so. The rest of the world has a totally different reference point. Now, having said all that, it is possible that the card you received may not be appropriate for international exchange. I would suggest a trip to the library or a search on the internet for your answer. Since you have the card, only you can determine if you wish to keep it.

I've been tuned in to 14.313 this afternoon. This must be the "daytime version" of 3.8945. The usual amount of profanity and nonsense...but with a twist. POLITICS seems to be the specialty here. Some guy named Herb (KB4FZ) has been on for the last few hours, talking about the evils of liberalism, Slick Willie, the welfare state, political-correctness, etc. The guy's right on the money, of course, which probably explains the other 2 or 3 stations trying to jam him.

"Loose lips sink ships" was the WWII motto.

There was a very interesting thread on the BoatAnchors email list about how just a receiver's local oscillator put out enough of a signal to DF on. Ships had to observe long periods with power removed from all radios to avoid detection.

> Radio Amateur ONL4021
> QSL via bureau UBA Belgium Hi Bill; you didn't say on what op system or PC you are
running this,
but there are several possibilites;

a. For most Windows users, you MUST run the ACARS software in a DOS mode. This does not mean a DOS box (as you can in Win95) but completly outside Windows. The reason for this is that ACARS and Windows conflict because each wants to control the serial port connection exclusivly. So you must exit Windows (yes, even '95) completly to run ACARS.
b. Leave your squelch completly open. The reason for this is because most squelches don't react fast enough, and part of the message will be lost before the audio reaches the interface.
If you are interested in getting more info on ACARS, come join us on majordomo@grove.net . Send a message like the following with nothing else in the body of the message;

subscribe acars
We also have a digest service (acars-digest) if you are interested in that. To my knowledge there has been no shareware development of ACARS software, but who knows that may change one day...73s Mike (colistowner, ACARS)

Frank:

The racist stuff is rare. You hear that just as much or more on lots of other freqs. I agree that's no good.

On 3894.5, however, what you are more likely to hear is a bunch of guys getting on who like to meet and talk each night, and a disgruntled group that fell out of favor and now takes pleasure in jammimg the group. This happens almost EVERY night. The head of the jammers, WB2OTK, is an individual who received a Notice of Apparent Liability from the FCC for $10,500. He has neither paid the fine nor stopped interfering with the group on frequency. Even if the group of normal people went to another frequency so they could talk, this character and his group of followers would be there to interfere. So what you hear is the inevitable war facilitated by the FCC's lack of ability to shut these jammers down.

If this *ONE* group of malcontents would go away, 3894.5 would be a nice spot on the dial where everyone would be welcome. I have listened to the guys on there and it is a good group.

I might add, regarding the racist issue, that here is an individual who lives fairly near my QTH who takes great pleasure in "race-baiting" these folks and instigating this type of discussion. You would not hear talk about it if this character would leave them alone. He is one of WB2OTK's desciples.

It is too bad that many casual listeners misinterpret what's going on there. I can understand that it takes a lot of listening, and without a program you may not know one number from another.

But this half-baked "analysis" and subsequent posting, along with callsigns (such as that frequently done by this "Drew" kid in Florida) isn't really all that fair to the group on the frequency who just wants to be left alone.

5X4F (UGANDA) NEWS. ZS5S passes on the following to OPDX:
"Conditions to 5X-land the last two weeks on 160 have been phenomenal. 220 QSOs were made of which 150 were with NA and 37 with JA. Another 120 QSOs were made on 80. Look for Paul, 5X4F, occasionally between 2130 and 0000z on 1.824 +/- QRM when QRN is low. He is always on between 0400 and 0440z looking for stateside at his sunrise which is 0413z. After working on 1824, he QSYs to 3.502 or occasionally to 3.799. If you have worked Paul on 160 or 80, please don't call him again unless it is for a new band or mode country during a pile-up. Paul would like to give 5X to as many new ones as possible. Thank you. If you hear him calling CQ to find out if the band is open, please call him. The setup in NW Uganda is minimal with 350 watts and 240 ft. long wire. Power source is solar charged batteries."

6Y, JAMAICA. Dick, K3DI, will operate QRP in the ARRL CW Contest from Ocho Rios, Jamaica with the call 6Y0A. He states that the 6Y0A operation

will be Single-Op entry and count as a PVRC DXpedition. Dick has twice been the worldwide winner of the ARRL CW QRP (C6AHL in 1994 and ZF2OP in 1996). At 6Y, he will use two radios contesting with split earphones. The total station's equipment consists of the two radios, two antennas and power supply which can be hand carried in one case. QSL requests may be via direct, bureau or the Internet (wilder@clark.net). Outside the contest, the call will be K3DI/6Y5 not 6Y5/K3DI.

9U, BURUNDI. 9U5CW and 9U5DX will sign 9U5T from the city of Bujumbura during the ARRL CW Contest, Februray 15-16th. QSL via F2VX. Gerry, F2VX, reports he has the logs of 9U5DX through January 21, 1997.

CE7, WELLINGTON ISLAND (CHILE). Look for Ismael, CE7AOY, to be active as CE7AOY/8 from IOTA SA-032, February 7-12th. Listen for him on the IOTA island frequencies, especially 21.260 kHz. QSL via CBA.

DU, PHILLIPINES. Dave, W1DV, will be active from Manila for the next two years as DU/W1DV. Activity will be mostly on CW. Dave is a missionary with Grace Bretheren Missions. QSL via KO7V.

FT5Z, AMSTERDAM ISLAND. Eric, FT5ZG, operates his own station on Amsterdam Island and will be there for one year. It was reported that he will try to be a regular on 7004 kHz at 1730z as FT5WE (now QRT) was in the past. His QSL Manager, F5RQQ, reports he has received January's log by FAX from Eric. QSL by the French Bureau REF or by direct to: F5RQQ Vigier JM 4 IMP Des LYS 63800 Cournon D'Auvergne France.

HP, PANAMA. Joel, F5PAC, will be here from February 11th to March 7th. His callsign and complete plans of operation were not reported. Joel will use an IC-706 including a GP for 10, 15, 20m and dipoles. He will be active from Grande (IOTA NA-202) and San Blas (IOTA NA-170).

HR6, HONDURAS (Looking for another OP). Gary, N7QXQ/HR6, advises that he has openings at Oak Bay Resort on Roatan Island (IOTA NA-057) for February and March (including weekends of ARRL and WPX contests). If interested, Gary can be reached at 011-504 45-2337. Best hours to call generally betwwen 2300 and 0200z.

P2, PAPUA NEW GUINEA. After Mar/DL3DXX and Joerg/DL8WPX stay in Bangladesh (see S2), they will travel to Port Moresby on February 14th to join Falk/DK7YY and Juergen/DL7UFN (both NODXA members) to be active from Misisma Island. Details of length of stay, callsigns and operations are presently unknown.

QSL NEWS AND UPDATE.....
Kaz, K8KS (ex. AA8HZ), reports to OPDX that he is a QSL Manager for a multi-op and multi-island South Pacific DXpedition that took place the month of July, 1996. He states that all the QSL cards have arrived from the printer. His order exceeded 15,000 cards and consisted of three different sets of cards to encompass all the QTHs included in the mega-island-hopping DXpedition. Cards will start coming out in early February for the following: 5W0BS, 5W0DG, 5W0TR, 5W0JB, 5W0KI, KH8/K8AQM, NH8/N8CC, KH8/KG8CO, KH8/KB8ECG, KH8/KG8DS, V63CK, V63CF,

KC6BP, KC6JJ, V73TR, V73JB, KH6/K8AQM, and NH6/N8CC. As you can see, there will be 17 separate logs to look up, and several of them have not yet arrived from the individuals involved in this DXpedition. The logs for each individual operator for each QTH are separately recorded. Kaz requests that everyone please have patience, and the cards will come out staggered over a 2-month period rather than everything in one single bulk mailing......

The QSL for 4U1SCO (UNESCO stations) are not printed yet. Please be patient!

ZY0FI which was active Jan/Feb. 1997, stating to QSL via PY2LLD is a PIRATE!!!!

Claude, F5GTW (QSL manager for FT5WE), informs us that Samuel, FT5WE, has gone QRT and his last day of activity was December 29th at 0703z. All QSOs after this time are made by a pirate. Samuel has made 16,000 QSOs. He will be back in France at the end of February. Presently, all direct requests have been answered up to November 6, and are in the mail.

S2, BANGLADESH. By the time you read this, Hannes/DL3NEO, Mar/DL3DXX and Joerg/DL8WPX/YB1AQS should have arrived in Dhaka. Mar and Joerg will stay until February 14th and Hannes until the 17th. Activity will be on all HF bands (sorry NO satellite operations this time). A special emphasis will be given again to the low bands (just like the group did the last two years from VK9XY/VK9CR). A 20m/66ft Titanex vertical and beverage-parts will be in their luggage. Also included will be a RTTY modem and other antennas such as a R7, R-7000 and wires. Look for S21XX on the usual standard DX-frequencies, mostly again in CW. In case they operate from two different QTHs (they will be carrying 3 transmitters) and in the last days after Mar and Joerg leave, look for Hannes to use the callsign S21XZ. This callsign has also been assigned to them, but they will only use it if necessary. All QSLs are going via Hannes, DL3NEO. The German bureau should be "OK", a direct address is to be announced later.

ST0, SOUTHERN SUDAN. John, PA3CXC, made a surprise trip to this rare spot this past week signing PA3CXC/ST0. His length of stay is unknown at this time. Last spot reported as this was being typed was 0828z Sunday (Feb. 2nd) on 18070 kHz. His next stop reportedly is 9U/9Q.

USI ALERT. Look for Dave, K1HT, to be active February 17-21st, from Cumberland Island (GA-002S or IOTA NA-058), mainly around 14260 kHz. QSL direct to K8JLF or via bureau to K1HT. ADDED NOTE: A special USI announcement will be sent to all OPDX InterNet Subscriber.

V2, ANITGUA. Sean, KX9X, and Matt, NM9H, will be active from February 12-19th, from the Caribbean super-station V26B. They will be on CW, SSB, RS-12, and maybe RTTY. Their primary plans are to give V2 out on CW on the low bands to JA and EU. They will also be active in the ARRL DX CW Contest the weekend of February 14th. They will be applying for V2 calls. Sean will be applying for V26NA, while Matt will be applying for V26CW.

These may change depending on availability. QSL info has yet to be determined.

VK4, STRADBROKE ISLAND (Australia). Sergio/VK4GK, Angelina/VK4AAC, John/VK4WX and Silvano/KB5GL/VK4WGL will be operating from IOTA OC-137 Saturday, March 15th, at 0530z ending Monday, March 17th, at 0100z. Activity will be on 3995, 7065, 14260 and 21260 kHz. QSL VK4WGL via KB5GL CBA. All others via CBA.

VK0IR LOGGED 80,673 QSOs. The complete record breaking details and breakdown will be sent to all OPDX InterNet Subscribers.

VP2E, ANGUILLA. Dennis, K7BV, will be returning here sporting his new callsign VP2EV (replacing VP2EWW), from February 10-18th. He will operate all HF bands on CW including the ARRL CW contest. Dennis will give RS-12 a try if someone is willing to forward information on the satellite's pass over to his E-mail address: k7bv@aol.com. QSL to his new address: 4357 Appollonio Way, Carson City, NV 89704.

XU, KAMPUCHEA (CAMBODIA). The "ARRL DX Bulletin" reports that Robert, KE2FB, is with the US Embassy, and is active as XU2FB. He works 80 through 10 meters, using CW, SSB, RTTY, and FM on 10 meters. QSL via N4JR.

ZY0, ST. PETER AND ST. PAUL ROCKS (UPDATE). By the time you read this Karl, PS7MM, and Tino, PT7AA, should be active a ZY0SK and ZY0SG, respectively. The two departed from Natal, Thursday afternoon on board a fishing boat named ALFA. The estimated time of the trip is four days. The duration of the DXpedition will depend upon the time the ALFA takes to fill its holds with fish. There is the possibility that their return trip will be made aboard another boat that will be fishing in the area. Activity will be on CW, SSB and RTTY. All the 9 HF bands will be used. QSL to home calls.

-=-=-=

be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

Hello all. Does anyone have information on the Hood View Radio Club?
I am interested in knowing where the meeting place is, the time, and how
often it meets.
I would like to know what days it meets and what it takes to join.
If you have any information to offer, send your reply to
ericp@teleport.com
Thanks in advance.

Slight over simplification. If these guys aren't fighting with each other, they're fighting with the group on 3898, 3865, 3950, etc. Like a bunch of street gangs with their turf wars. It's been going on for years.

Of course, this list proves nothing - other than you have too much time on your hands.

Since you -do- have so much free time, why not analyze each and every message you have counted - and categorize them? Make up categories like:

a. direct response to an inquiry
b. confrontational, non-informational reply

...you get the picture.

THEN your data collection has some merit. Simply counting addresses proves absolutely nothing.

Confrontationally yours,

2594. FS: Full Power Amp (80-10 Meters)

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-02 00:00:00 UTC
From: "Jeffery A. Purtle" <jpurtle@smartlink.net>
Message-ID: <32F53CA0.73BB@smartlink.net>
Source record: 205659

The Amp has two 4-400 tubes in it in great condition and easily delivers an 1100 Watts carrier on CW with 100 Watts driving it. It has tuned inputs, which easily match it to the 80, 40, 20, 15, and 10 Meter Bands. It was built by a man named Cliff Kurtz, N6ZU, of Stockton, CA and he guarantees it for life. I know of a man who lives in Los Angeles that had Cliff drive all the way down here to fix it. It is built so heavy that nothing ever happens to anything he builds. I am selling it after moving into an apartment and having no need for it in the future as I see it, unless to make my neighbors mad.

Like I said I live in the Los Angeles area, Valencia to be exact and the price would not cover shipping. I would prefer pick-up to make sure the tubes don't get damaged in transport. I will also include a Swan WM-1500 Watt Meter.

I am asking $300.

Please contact me by phone: (805) 287-5953 or Email: jpurtle@smartlink.net

Thanks and 73,
de AC6IW

Cut the bullshit, NO decent Christian would write like you.

The writings of Bob Adlewr NZ2T:

Hi tough guy. All the bad guys I know just do what they're going to do, and
skip all the talking. Since I am one of those guys, I'll just take your
threat as the usual Burt Fisher bullshit and toss it where it belongs. If
you're really bad, just c'mon down here and let's get acquainted. There's no
need to talk, asshole. Otherwise, please give your mama another kiss for me
jagoff, and then get lost.

Bese mai coulo maricon,

Bob

I am not the author but I advance this:

A Christian is not some one who waves Christanity like a flag or tries
to make you believe he puts his pants on differently than you do.
Christanity is however, something that is kept pretty well secret, lest
some one try to steal it from you. In fact, we are commanded to speak to
our God in private where no one can see or hear. Anyone who flaunts his
Christanity for all to see, is doing it for show and is not to be
trusted. WE as christans are taught NOT to judge others, but that does
not mean that you are forbiden to use good judgment, including judgment
about other people and their motives. I think it a matter of good
judgment on your part to look a second time at some one who says he is
more honest because he is a Christian. I think Churches are filled to
the brim with unscruplus people who wish to gain the trust of those
around them. Wolves in sheeps clothing so to speak. I Do not wish to
cram Christanity down anyones neck, but if you see and hear a noisy one,
its a fake!

DREW!!!! Why did you start a new code thread on .misc? Please, use .policy for this debate - it was created specifically to keep the topic *off* of here. Now,

MN Maniac <mnmaniac@aol.com> wrote:
>It's been awhile since I visited "the zoo", so I decided to tune my
>receiver to 3894.5 tonight and see how well the Morse code requirements
>are working on HF these days. The Beepers say CW keeps the riff-raff out,
>so I figured I'd check for myself. Here's what I'm hearing:

Very few pro-code folks say that. You know my contention has *always* been that even the riff-raff and lids can learn the code. If we have single-digit-age children that can learn it, what makes you think adult crud can't?

>8:44pm ET, 1/31/97, 8:44pm EDT, Near Orlando, Florida
>
>Two unidentified stations spewing profanities at each other
>One unidentified station playing Barry Mc Guire's "Eve of Distruction"
>One unidentified station playing an endless loop of a human voice
>laughing.
>One unidentified station playing a noisemaker of unknown origin.

Given that anyone can purchase an HF rig, new or used, and that these stations didn't identify, what leads you to believe they are even licensed?

>Yep. That Morse requirement really keeps 'em on the straight and narrow,
>doesn't it?

Heh, they might have even been Techs like yourself, operating illegally.

Regardless, how come you are never able to find any riff-raff in the CW segment? Drew????? Answer me!!

I find it amazing that with the huge number of HF-licensed amateurs, you can only find one or two or three "bad" freq'ys on 80. Given that if you so much as sneeze on HF half the world might hear you, I believe we're behaving ourselves quite well if there are only a few bad apples scattered around the country.

Another way of thinking about this, since 80 is 500 kc wide, we could carry on 250 CW QSOs at the same time, spaced every two kc apart. Hence, your single freq'y of 3894.5 kc is only 0.4% of the possibly QSOs that could be taking place.

Same with the Coast Guard. Every clear WX day at Local Apparent Noon aboard
every Coast Guard cutter, all nav officers stand out on the wing of the
bridge with sextant in hand to take the noon sighting.

Celestial nav is how I brought a sailboat across the Pacific from Hawaii
to San Francisco.

>DREW!!!! Why did you start a new code thread on .misc? Please, use
>.policy for this debate - it was created specifically to keep the
>topic *off* of here.

Better tell that to the other legions of rec.radio.amateur participants, too. I'm just following the example of others on here. When in Rome...

>>8:44pm ET, 1/31/97, 8:44pm EDT, Near Orlando, Florida
>>
>>Two unidentified stations spewing profanities at each other
>>One unidentified station playing Barry Mc Guire's "Eve of Distruction"
>>One unidentified station playing an endless loop of a human voice
>>laughing.
>>One unidentified station playing a noisemaker of unknown origin.

>Given that anyone can purchase an HF rig, new or used, and that these
>stations didn't identify, what leads you to believe they are even
>licensed?

Kinda expensive to buy equipment for 75m, isn't it? Most bootleggers would probably opt for the $200 HTX-202 or RCI-2950. I can't see them buying Kenwoods and putting up towers to bootleg on 3894.5.

>>Yep. That Morse requirement really keeps 'em on the straight and
narrow,
>>doesn't it?

>Heh, they might have even been Techs like yourself, operating illegally.

Oh, Jeffy...you really should spend a few minutes and check QRZ before you make ASSumptions like that. Besides, we've been through this before, haven't we? I am not and never have been a No-Code Tech. What does it take to convince you Beepers that, believe it or not, not EVERYONE who is in favor of dumping the CW requirements is a no-coder or CB'er? Ignorance is bliss...

>Regardless, how come you are never able to find any riff-raff in the CW
>segment? Drew????? Answer me!!

Because CW operators are superior, all-mighty, God's gift to amateur radio. That's why. Are you happy now?

>I find it amazing that with the huge number of HF-licensed amateurs,
>you can only find one or two or three "bad" freq'ys on 80.

It's the whole damn BAND!! 3894.5, 3898, 3950, 3910, etc., etc.

>Given that if you so much as sneeze on HF half the world might hear you,
I >believe we're behaving ourselves quite well if there are only a few bad
apples
>scattered around the country.

Whatever. You hear what you want to hear, I guess.

>Another way of thinking about this, since 80 is 500 kc wide, we could
>carry on 250 CW QSOs at the same time, spaced every two kc apart.
>Hence, your single freq'y of 3894.5 kc is only 0.4% of the possibly QSOs
>that could be taking place.

Why stop there? I'll bet if we all used spark-gap transmitters, we could
squeeze even more in. Hey, while we're at it, anybody got a couple tin
cans and some wire?

>>-Drew in Sunny Central Florida-
>> CB Radio KADF-6895

>Well, that's something to be proud of...

Oh yeah...that's right, I forgot....NO amateur radio operator has EVER
used a CB radio, right? Actually, I am rather proud of it...I was 12
years old and worked an entire summer mowing lawns, cleaning basements,
cutting wood, etc., in order to finance my station. That was back when
radios cost more than $39.95, remember? But never mind...all CBers, past
and present, are scum in the eyes of holier-than-thou ham operators,
right? I'll remember to bow down to you next time I approach my monitor
and your name appears in a thread.

2608. Removing Yaesu FT 890 filter

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-02 00:00:00 UTC
From: turner@safety.ICS.UCI.EDU
Message-ID: <21855.854863855@safety.ics.uci.edu>
Source record: 205696
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.swap

Anyone out there successfully remove the Yaesu FT 890 CW filter from its position on the board and have tips on such removal?

The QST review said they had a lot of trouble, and I have the optional SSB filter in my 890, which takes up the entire side of the CW filter so that I cannot hold it or put a screwdriver underneath it to pry it up. It is very difficult to reach.

I tried solder wick and used the Radio Shack solder sucker and tried my best to remove all solder from the pins. The plated through holes do very well at holding the filter down anyway.

Any help is much appreciated. I had arranged for a swap with a fellow for his narrow CW filter, he got his out (he still has the tiny ceramic filter in the SSB position so he has room to maneuver on the one side). I cannot swap with him since it seems impossible for me to remove mine without damage to the board. Yikes.

Yes, you certainly have. Because you neglected to build a receiver,
you've been transmitting your spark gap noise bursts on top of vital
official emergency services transmissions. And you've been interfering
with the EKG paramedics are using to monitor a heart attack patient,
and you *stopped* the pacemaker of your neighbor. Now will you TURN
THAT THING OFF!

>>Please tell us why? Just what do you consider a non-semiconductor

Hi Peter - As you've noticed, this is the .misc subgroup - anything that doesn't fit in any other subgroup should be posted here. For specific topics, we have the speciality subgroups .antenna, .homebrew, .dx, .equipment, .swap, .broadcasting, .info, .policy, .scanner, .shortwave, .digital, .space, .cb, .boatanchors; there are also about two dozen others but those are non-US groups not necessarily in English (I've even got a Russian amateur radio NG in my newsreader!).

So, even though Burp and Lamb-baaa are on the fringe, there is no other subgroup where'd they fit.

(I've only posted 192 messages since September so I'm just trying to up my count in sending this worthless response. Got to stay ahead of that scumbag down in Guam.)

From: Lance Sanders <lances@mindspring.com>
Message-ID: <32F46C50.3D88@mindspring.com>
Source record: 205703

I've recently put up a web site containing net times and frequencies in the Georgia area. As I live near Atlanta, it's section contains plenty of information, but the other sections are mostly incomplete.

Please stop by and check it out. I think you'll at least like the sorting capability. MS Internet Explorer users will also find some nice ActiveX touches. The URL is: http://www.mindspring.com/~lances

If you'd would like to contribute additional net info to the site, I'm looking for all HF,VHF,UHF nets in Georgia, please include the following items in a message to lances@mindspring.com:

Net Name
Type of Net: Emerg,Traffic,Weather,Swap,etc.
Frequency
Offset
Days
Time
Observe DST?
Coverage Area: Towns, counties
Notes/Comments
Net Manager

Thanks for reading,

If my spark gap transmitter was interfering with your receiver, would you recognize if the interference was in morse code? I certainly wouldn't use it to mess with my neighbors. I probably wouldn't be near any neighbors unless they were in trouble too. This is my point - not simple run to the rescue with my 2-meter H/T but survival. Would I care if I broke FCC or ITU rules? Not if it meant I'd be rescued. But I would care if I sent out morse code and nobody would recognize it or read it at all.

I wouldn't even build the thing unless I had to.

2619. Justifying fagotry...

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-02 00:00:00 UTC
From: whiteshoe2@aol.com
Message-ID: <19970202134801.IAA22652@ladder01.news.aol.com>
Source record: 205707

I was gonna let it go....because the justifications were SO STUPID. But then again, there are people who believe this shit!

Number one: NO....the rectum IS NOT self lubricating! (Someone tried to imply that, otherwise, stools would come out very painfully.) The FACT is, the stoolls themselves are a bit on the slick side, to ease in their passage through the rectum. This STILL doesn't address the fact of things going IN to the rectum. Here, we are talking about the NATURAL process of waste coming OUT of the rectum.

Number two: This silly excuse won top honors. Someone tried to equate the concept of God not making a rectum self lubricating, with the idea that just because God made us without wings, we weren't suppose to fly.

Funny....the only way man can fly now adays is with an external device. Man STILL cannot fly strictly on his own!

Get real, fags! Your excuses and self justifications for your vulgar and perverted behavior are insane!

I'd like to see what all of you homo-lovers would say to those FORMER fags who have come to realize their sickening livestyle, and have "straightened" out their ways. That would surely be an eye-opener.

73, Fred

Burt:

Why even argue with these backwoods, uneducated types who fear everyone
who is different from themselves? They throw this "Bible" stuff around
like they know something about it. The truth is that they just pick up
twisted snippets from other losers and simply parrot them.

And it is impossible to teach them because they are more or less a
sub-stratum within the human race. Responding to them as if they were
fully-evolved humans only encourages them.

Dave

2623. 3894.5...Summary & Review from 2/1/97

Things were lively again last night on "the zoo." Major participants included "Big Al" (K4OKA), KC3AU...who was described repeatedly by one of his friends as "The fake preacher from Scranton, Pennsylvania who manufactures tape recordings with which to jam his fellow amateurs." Polly was also heard with a strong signal here in Central Florida.

Highlights of the evening's transmissions included an unidentified station who repeatedly said "HO HO....HO HO...HO HO...HO HO...HO HO...HO HO." When questioned as to what this was, the station responded with "It's Santa Claus, you senile old %$#@!!" Also worth mentioning...and this is my personal favorite...a catchy little polka tune entitled "The Stump-Jumper Song" was played repeatedly. Couldn't catch all the words (due to jamming attempts), but it mentions Big Al and amateur radio...and the chourus goes "Everybody sing along with the stump-jumper song."

Damn...this is more entertaining than "The Gong Show!"

>2 or 3 stations trying to jam him.

If you happened by chance to see my earlier post about this guy, you'll understand why he's so hated.

You should have heard 14.313 Mhz a few years ago when Mike, KA4MUJ was on the air. Mike was always jammed by the infamous "Raincoat Charley" among others. Then there was the infamous Ronnie, NQ2C, who always sounded like he just drank a gallon of capucino. There was also a character named Fred, (can't remember his callsign) who claimed to be a Viet Nam POW, among other things. Fred would get onthe air and call Herb a "filthy rotten athiest". Fred was a "WB2OTK wannabe." At one point, Fred made a statement on the air that Mike recorded, and would play twnety times a day. If anyone remembers, it went something like, "I've got a five thousand dollar reward to anyone who can prove at anytime that WB2O2K has lied. I've got a ten thousand dollar reward for Herb Schoenbaum if *he* can prove Rich has lied." (BTW, WB2O2K is not a typo. That's how Fred said Rich's callsign." If you remember this tape from about 5 or 6 years ago, you'll know who I'm talking about.

The frequency, at that time, was actually entertaining to listen to if the jamming wasn't too bad. However, now it's just Schoenbaum doing a monolog, and it gets boring after awhile.

BTW, the QRZ callsign database lists KA4MUJ as a silent key. Is this true? If so when did he die?

Why do the anti-CW guys keep up this inaccuracy that "the military no
longer uses CW?" Why, then, does the U. S. Army still operate the Morse
training school at Fort Huachuca, Arizona? Yes, they really do, still,
today, with classrooms full of students from all services.

I just purchased two Tektronix Waveform Monitors but they did not come
with the manuals. These waveform monitors are Type RM 529. If you have
any information as to how I can get ahold of the manuals for them and
also the service manuals too please forward the information to me.

Thanks in advance.

TTYL,
Mike

(Jesus ... if that was my site, and I was posing as an educator ... I sure as hell wouldn't want to admit to it)

HOWCUM ... If you think CW is so neat ... you don't have a MIDI or TrueSpeech encoded .WAV file embeded in your CW page??? It ain't that hard to do.

And since we can ALL copy at 20WPM (at least!) It'd be an easy way to show the whole damn world what our hobby is REALLY all about (religious issues aside for the moment)!

Why, hell Burt, everyone ought to embed their messaage in a CW.WAV file in every WEB page and we could put the monitor manufacturers out-a bizness ... and we could all use LYNX browsers with no graphics capabilities at all. (But, we could all make a few bucks investing in SoundBlaster cards, eh)

You really are a minimalist sorta guy ain't you Burt.

Why teach kids about automated networking when CW will do just fine?

Steve,

Is this ... "ARRL Life member" ... your only claim to fame. Boy, you need help! Please don't think we all accept that as certification of your omniscience.

IMHO, I don't think you'd recognize either truth or reason, even if you had the good fortune to sit on them and they subsequently bit you on the ass.

I (only one of many) have refused to renew my membership in the ARRL (its really just another publishing house with a bogus tax advantage) because of the stand they've taken on the code issue.

Don't apologize, Steve. I appreciate seeing the FS/WTB notes on here.
The *.swap newsgroup is just too large to manage.

Every once in a while, some would-be net cop posts something to criticize
these ads, and the result is usually:

1) a lot of nasty followups
2) no remedy to the situation, as many continue to post ads here

Fortunately, the most recent net cop received only two public responses.

2645. 2 meter Radio

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-03 00:00:00 UTC
From: Steve Sampson <ssampson@oklahoma.net>
Message-ID: <01bc1188$04d4a340$a37002d0@ssampson.oklahoma.net>
Source record: 205538

I'm looking for an a 2 meter radio (146 - 148 MHz) that I can use to program in a frequency using a 5 MHz VFO (DDS actually).

Does anyone know of a radio that triples 3 times (5 MHz first stage), or could mix 5 MHz with another to produce 2 meter operation?

The project is to run my Direct Digital Synthesizer into this to produce a 2 meter frequency hopper beacon. I'm thinking there is something old that does this, before I break out some junk boxes!

Thanks,

Steve, n5owk

Luck got screwed by the ARRL. They rushed to hush it all up, and
never have given a substantial reason for firing him.

Shame too. Luck was a great Ham.

I really disagree with that statement. If you compare the costs
of toda's equipment (eg. a low end HF transceiver) you'll
find that it is both cheaper in absolute dollars as well as
being thnically superiod to anything similar that was available
30 years ago.

THE BOZOPAPERS VOLUME 9
ISSUE 2

BURT DeSpincter And The Voidazoid Trio

Once upon a time there was this guy who did not know what he wanted to be when he grew up. So, he looked around at a variety of possibilities that
might be available to someone of his limited intelligence. He made some interesting observations:

He saw that what really got people's attention was discomfort and pain. This
impressed young Burt, and he sought to explore this concept further. He watched carefully, and as he did so he made a startling discovery. The one ailment that was unique was hemorroids. It was then, that Burt decided that he wanted to be a pain in the ass when he grew up!

As time went on, young Burt became more and more proficient at his ability to imitate a severe case of hemorroids. He could twist and make someone leap with discomfort, or turn and make a person's face become distorted and make someone so ornery, that they just might punch a moving semi and knock it clean off the road! Burt just ate all that up. Yessir, he was just as happy with that as a fly in a cow pasture.

Then, just a few years ago, Burt hit the "motherload" for someone who is a professional asshole. He found the internet and an audience. Holly Hanna! All of the past "Burtisms" were nothing compared to what he could now do. He got so excited that he forgot his pants were undone when he got to his classroom, and well .... those pink panties he was wearing were like REALLY embarrasing. I heard it made the Boston Globe, on the sports page. The headline read, "Dennis Rodman Eat Your Heart Out"!

So, like anyway, this amateur radio newsgroup became Burt's new stomping grounds. No one could really get to him, and he could have all these guys pissed off at him all the time. His Doctor got a little worried, though, and had to give Burt a transfusion of Prep H, when Burt went into Hyper-Assphasia, which is a condition that results from chronic bouts of cranial rectumosis. We consulted with several doctors, who have now determined that Burt, in fact, is an alien! That's right pilgrims!! Your old flame thrower, snow blower, and general bufoon is not of this Earth at all.

We had to go all the way to Fuzznurtz, Iowa to find out more. Seems Burt arrived on the Bozosphere from the Voidazoid Zone. No one is really sure where he is from originally, but some say it is the 5th dimension, where Burt was quite the baseball fan. He invented the "Bottom of the Fifth" stretch in his version of the game, which was around the time that his bottle of MD 20-20 was about empty. "Well, ya had to keep warm somehow", he used to growl. Further resarch reveals that Burt was also the captain of the cheerleading team for the Bozoid Blabberwusses, of "Uranus", where Burt was featured in drag as a Michael Jackson look alike.

Bozopapers has been contracted to do a special, with Burt as our guest sometime in the next two weeks. Our reporters will send you the very latest on the Ass with No Class, The Clown who Likes to make you frown, The Yap That's Fulla Crap, The Wind that will not rescind.

Here is one of right out of the ole Hershey Canal from the asshole himself:

Subj: NZ2T HIPPO CRITTER

Reply-to: burtfisher@geocities.com
To: nz2t@aol.com

nz2t@aol.com wrote:

> Bob NZ2T
> (Oh ... I am both a Native US citizen AND a Christian, BTW)

Cut the bullshit, NO decent Christian would write like you.

How would YOU know what "decent" is? And did I say that I was a "decent Christian"? I am one of those, perhaps, who one might have found during the Crusades, har har.

The writings of Bob Adlewr NZ2T:

It is "Adler", you hydrocephelic imbecile!

Hi tough guy. All the bad guys I know just do what they're going to do, and skip all the talking. Since I am one of those guys, I'll just take your
threat as the usual Burt Fisher bullshit and toss it where it belongs. If you're really bad, just c'mon down here and let's get acquainted. There's no need to talk, asshole. Otherwise, please give your mama another kiss for
me jagoff, and then get lost.

Bese mai coulo maricon,

Bob

So...what's your point? I just simply invited you down here for us to get better acquainted. Now, go and flip those burgers, boy!

I am not the author but I advance this:

Burt - you could not advance a real (original) idea on a rocket travelling at the speed of light, with Einstein himself at your side!

A Christian is not some one who waves Christanity like a flag or tries to make you believe he puts his pants on differently than you do.

I DO NOT EVEN POSESS A FLAG, AND HAVE TRIED TO MAKE NO ONE BELIEVE ANYTHING. I DO, HOWEVER, PUT MY PANTS ON DIFFERENTLY THAN BURT, WHO (OBVIOUSLY) HAS SOME TROUBLE DISCERNING THE DIFFERENCE BETWEEN HIS ASS AND HIS ELBOW! THE ZIPPER GOES ON THE OTHER SIDE, BURT !

Christanity is however, something that is kept pretty well secret, lest some one try to steal it from you.

IT IS? WHO TOLD YOU THAT? THE TOOTH FAIRY?

In fact, we are commanded to speak to our God in private where no one can see or hear. Anyone who flaunts his Christanity for all to see, is doing it for show and is not to be trusted.

EVER HEAR OF THE GOSPEL AND EVANGELISM? NOW, ASIDE FROM BEING A SELF-DECLARED AMATEUR RADIO PUBAH, BURT SEEMS TO BE AN 'EXPERT' ON OTHER THINGS AS WELL. GEE, DUH .... AREN'T WE ALL JUST SOOOO LUCKY TO HAVE SUCH AN OMNISCIENT PERSON AMONG US?

WE as christans are taught NOT to judge others, but that does not mean that you are forbiden to use good judgment, including judgment about other people and their motives.

HHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH AHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA !!!! THIS FROM BURT ??? THIS AIN'T OUR BURT, TALKING ABOUT 'NOT JUDGING OTHERS' .... HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA !!!!

I think it a matter of good judgment on your part to look a second time at some one who says he is more honest because he is a Christian. I think Churches are filled to
the brim with unscruplus people who wish to gain the trust of those around them. Wolves in sheeps clothing so to speak. I Do not wish to cram Christanity down anyones neck, but if you see and hear a noisy one, its a fake!

AND BURT SHOULD KNOW, AFTER ALL, WHAT A FAKER IS.

Male-male intercourse constitutes a single homosexual *act* (prohibited,
for whose who care, by Lev 18:22). It does *not* prohibit a proclivity
towards doing that.

Male-male intercourse goes on in prisons, but would you call the forced
recipients of it homosexual?

Then again, if you picked up your knuckles from the ground to scratch your
brow to brood on it a bit, maybe you would.

Yeah, but you got them from the British, so they weren't yours to begin with. But the Imperial (oops standard for the Americans) system wasn't able to handle electrical measurement; amperes, ohms, etc. are all SI units, and as my mom says "if you're going to use something, you might as well use it right". Whcih is nicer than my physics teacher who used to say that an error like that could be a sign of an mistake, but could also be a sign of something worse...

No, that's not the reason at all. Besides, if you look in the pre-60s
literature, you'll see that Mc/s and kc/s was used. Even old gear that
I own have those two rates marked on their panels.

Someone@somewhere said it the best - we type fast in order to get the
message off to save time and money. This is an informal forum - we're
not being graded. If you want perfect text, read a book.

Kind of scary that someone had to whip out a calculator to determine
that. Using powers of 10 you can get a close estimate in your head.
Sort of like copying code in your head.

Amateur Radio: Elmers List Info and Administrivia

This administrivia file and the companion Amateur Radio Elmers Resource Directory are intended for non-commercial distribution via the Internet. Any other uses, please E-mail for permission.

[Special Note: Greater Omaha Public Access Unix has been acquired by Novia Internetworking as of September 1, 1996. Novia will assume ownership of the gonix.com domain and intends to keep it active (aliased to novia.net) for the foreseeable future. This means that you may use either the new novia.net addresses, listed below, or the old gonix.com addresses for the Amateur Radio Elmers Resource Directory. I'd like to thank the administrators of Gonix for their outstanding support of this resource over the years, and look forward to a fruitful relationship with Novia Internetworking for some time to come.]

Table of Contents

* Elmers List Formatting Standards
* A Brief Historical Overview
* What is an Elmer?
* What is an Elmer Today?
* What is an Internet Elmer?
* How may I obtain the latest copy of the Elmers List?
* How may I contribute to the Elmers List?

Elmers List Formatting Standards

In order to standardize the Internet resource notation used in this Directory, I've decided to adopt Uniform Resource Locator (URL) format throughout. In addition to being a straightforward, human-readable, format for specifying File Transfer Protocol (FTP) archives, Gopher and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also

amenable to formatting as hypertext links in Hypertext Markup Language (HTML). For example, users viewing this document at designated World-Wide Web Servers (see "How may I obtain the latest copy of the Elmers List?" below) will see all URL's converted to hypertext links on their WWW client. Rather than fumbling with the various conventions of FTP, Gopher, WWW, and Usenet News software, the document or directory referenced by a hypertext link is but one mouse-click (or key-click) away.

While I'm happy to incorporate the latest and most popular information-formatting standards into the documents that I maintain, I really can't allow myself to be dragged into the role of a WWW help-desk for all of the Internet. Please understand this when I politely refer you to other Elmers, easily-obtainable on-line documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

The URL format is easily mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port 5555 (if the standard Gopher port of 70 was used, the ":5555" part would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with callsign.cs.buffalo.edu via non-standard port 2000 (if the standard Telnet port of 23 was used, the ":2000" part would be replaced by ":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from your local news server.

URL's that start with:

http:

Are only accessible via WWW client software or "browsers".

For more information about URL formats, see:

http://www.w3.org/hypertext/WWW/Addressing/Addressing.html

Disclaimer: While I have personally confirmed the accuracy of all URL's through the Lynx WWW client, any referenced documents external to this document are subject to future changes beyond my control. In addition, with networks and their administration being what it is, many services with up-to-date URL's may be temporarily unreachable. Please consult with your local gurus, consulting staff, or help-desk to confirm that it's a non-local problem, then ask the Elmer him or herself (me in the case of URL's which appear outside of individual entries). The currency and accuracy of URL's should be at least no worse than that of the Elmers entries themselves (which are each individually confirmed by me every 2 years, and updated within 1 month on request of the Elmer).

A Brief Historical Overview

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1946-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and-forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

What is an Elmer?

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the

benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer Today?

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is an Internet Elmer?

With the ever-widening scope of the Internet, the amateur radio newsgroups on Usenet, and now the World-Wide Web, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area(s) of expertise. URL-format pointers to resources they maintain, such as WWW home pages or FTP archives, would also be quite welcome. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

As part of the Elmers List's entry into the World-Wide Web, I've also provided a formatted WWW Registration Form. It may be accessed from:

http://www.novia.net/~pschleck/elmers/register.html

I have set up an administrivia mailbox for correspondence related to this list (elmers-request@novia.net, the default Reply-To: of this message when posted to Usenet News). I would prefer that all such correspondence be directed to that address. In addition to saving it into a special folder, my incoming E-mail filter will also send you an automated return-receipt. While I can guarantee that I will read all mail sent to elmers-request before the next month's posting of the list, mail sent to pschleck may not necessarily get reviewed for some time (although all E-mail sent to me is certainly read with interest *eventually*).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?

There are currently 6 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use the Mailing-List or Mail-Server options:

World-Wide Web (WWW):

This is the recommended method for accessing the Elmers list, as it allows this resource to be viewed as hypertext. The home site at www.novia.net features immediate updates each month, hypertext-linked subject and geographic indexes, keyword searching, and registration and feedback forms. The other two sites use automatically-converted versions of the Usenet news articles, but are still usable, particularly if you are outside North America. The site marked with an asterisk also offers Wide-Area Information Service (WAIS) index searching by keyword for all Usenet News FAQ's:

* http://www.novia.net/~pschleck/elmers/
*
http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.misc.ht
ml
* http://www.cs.ruu.nl/cgi-bin/faqwais *

(Note: Because of maintenance problems - FAQ documents not being promptly updated in particular - the sites at Ohio State and Smart Pages are no longer recommended for accessing a current copy of the Elmers List and have been removed from the above list.)

see also the newsgroups under comp.infosystems.www.* (I haven't listed URL's for all of the newsgroups under this hierarchy as there are now about a dozen of them (!!!).)

Usenet News:

This was the original distribution medium for the Elmers list. It continues to be supported for users who cannot access the World-Wide Web. Since the document uses URL's throughout, the news article version may also be viewed as hypertext via some mail and news readers. The latest copy of the list can be found in the news articles with the Subjects of "Amateur Radio: Elmers Resource Directory [A-*]," "Amateur Radio: Elmers Resource Directory [*-*]," and "Amateur Radio Elmers Resource Directory [*-Z]" (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

* news:rec.radio.amateur.misc
* news:rec.radio.info
* news:rec.answers
* news:news.answers

on the first Monday of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

Anonymous FTP:

If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

* ftp://ftp.novia.net/customers/pschleck/elmers/
* ftp://ftp.cs.buffalo.edu/pub/ham-radio/
* ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/
* ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/

Internet Gopher:

The latest copy of the list should be available from the following Gopher sites:

* gopher://jupiter.sun.csd.unb.ca/
* gopher://gopher.univ-lyon1.fr/
* gopher://ftp.win.tue.nl/
* gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

Mailing-List:

Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along

with many other informational articles about radio) when it is
published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:
subscribe radio-info

The server may not be able to determine your return address. In that
case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

Mail-Server:

If you don't want to read through the entire gateway of
rec.radio.info, or want a copy of the list right away, send E-mail to:

ftpmail@ftp.novia.net

and in the BODY (not the Subject) of the message, write:

```
open
get /customers/pschleck/elmers/admin
get /customers/pschleck/elmers/index/subject
get /customers/pschleck/elmers/index/geographic
get /customers/pschleck/elmers/list/part1
get /customers/pschleck/elmers/list/part2
get /customers/pschleck/elmers/list/part3
get /customers/pschleck/elmers/list/part4
get /customers/pschleck/elmers/diff
```

Alternatively, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

```
send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index/subject
send usenet/news.answers/radio/ham-radio/elmers/index/geographic
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/list/part4
send usenet/news.answers/radio/ham-radio/elmers/diff
```

and the latest copy of the list should be sent to you E-mail within 24
hours (the mail-server uses batch priority to reduce system demand).

How may I contribute to the Elmers List?

By using this resource, you are benefitting the net by obtaining assistance in the fastest and most efficient way possible. By volunteering to appear on this list, you are contributing to the good reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users, for making this service a success.

--

Amateur Radio: Elmers Resource Directory

More information about this list can be found in the companion posting
to this file, "Amateur Radio: Elmers List Info and Administrivia."

73, Paul, K3FU

- A -

John Ackermann AG9V

jra@febo.com

http://www.febo.com/

My primary interests are in packet radio network building
(particularly higher speed stuff) and TCP/IP. I've got quite a lot of
info on using the Kantronics D4-10 19.2kB radios, as that's the
hardware we've been struggling with here.

I'm now working heavily with Linux, and help run a TNOS/Linux BBS, and
a Linux native-AX.25 switch. Although I'm not "the world's greatest
authority" on either, I'd be happy to help folks with questions to the
extent I can.

I've developed some experience with full-duplex packet repeaters. I've
built 2 19.2 repeaters, and am working on a 9600 baud one now.

TAPR (Tucson Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a
result, the TAPR net-sig mailing list was born, and is now ready for
operation.

This list is <not> intended to replace any of the existing
packet-related mailing lists. Its purpose is provide a medium for
communications among those interested in packet radio networking, both
dealing with technical issues and political/regulatory ones. We'll
discuss things like how the potential 219MHz band will fit into the

networking picture, how to link areas using different networking schemes, how to set network parameters, etc. The list's charter will be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by sending mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further details about the Net-SIG (including upcoming conferences).

TAPR Vice President and Board Member

Joint ampr.org IP Coordinator for Ohio subnet (44.070.xxx.xxx)

Please direct all correspondence regarding the assignment of ampr.org IP numbers in Ohio to:

ipaddr@ag9v.ampr.org

which is a mailing list read by a team of coordinators.

[Editor's note: All ampr.org coordinators are listed in the document at:

ftp://ftp.ucsd.edu/hamradio/amprnets

]

Chuck Adams K5FO

adams@sgi.com

Maintainer of Standardized Info Sheets on QRP Rigs

They are available from the QRP-L WWW Pages at:

* http://qrp.cc.nd.edu/QRP-L/index.html
* http://www.lehigh.edu/lists/Archives/qrp-l/ (on or after June 1, 1995)

Owner of QRP-L Mailing List

The QRP mailing list is open for discussion of any subjects relating to low-power amateur radio operation. Example topics: portable operation, equipment design and construction, solar and battery power, QRPp, contesting, kit building, etc.

This list was started by me with an announcement on the rec.radio.amateur.misc USENET group in early 1993. Bruce Walker, WT1M, maintained the mailing lists and FTP area from then through August 1994 on a system at Thinking Machines Inc., think.com. Then it was moved to qrp-l@netcom.com until May 14th, 1995. Thanks to Mike Ardai, N1IST, for all his hard work during the time that QRP-L was on netcom.com.

I am still the keeper of the non-electronic archives, including copies of some schematics, etc. Contact me directly or watch this list for more info.

To subscribe, send E-mail to:

listserv@lehigh.edu

and in the body of the message, write:

SUBSCRIBE QRP-L your_name your_call

where "your_name" is your real name, and "your_call" is your callsign, if any. For example:

SUBSCRIBE QRP-L John Doe K5FJZ

A welcome message with more detailed help will follow shortly.

To unsubscribe, type:

UNSUBSCRIBE QRP-L

Edward Addy KE0EG

eaddy@nacec.org

Executive Director, North American Center for Emergency Communications

After a large disaster strikes your community and your family, I am sure you will agree that its a little late to start building a massive rapid response, emergency communications system supported by thousands of people within companies, organizations and serving as volunteers to provide essential support services.

We are the North American Center For Emergency Communications Inc. (NACEC), a federally-registered non-profit organization serving North

America since 1992. We have been developing a system that merges many different technologies to create a unique, high-capacity, rapidly-deployable solution to the problem of communications outages and shortages that occur following a large disaster. Our volunteer network in using the Internet as its communications backbone, is itself using one of the many technologies employed in NACEC's overall solution.

To help ensure the greatest possible effectiveness in as many communities as possible throughout North America, we are developing a very large volunteer network of community volunteers (Community Ambassadors) who work with our staff and their local communities. If you are community active and are interested in helping, we need your help, NOW. Please, don't wait until disaster strikes, help us to be prepared and be ready to assist your community.

The more communities that are represented by our volunteer network, the more effective we can be in disaster preparedness, emergency operations and in the area of emergency and military family message handling and delivery.

As a NACEC volunteer (Community Ambassador) you will assist with the movement of information that is vital to the continued success and growth of this organization and the survivability of your family and your community following a large disaster.

This project is growing rapidly, as we locate and add new dedicated volunteers from as many communities as possible from across North America. I hope you will join us in making this organization a success.

To find out more about how you can get involved in this project and use your Internet skills to help your community, please review the information that is in our WWW Homepage area which can be found at:

http://www.nacec.org/

An electronic volunteer application form can also be found there as well. Should you have any questions, please address them to my E-mail address above.

* arrl-nediv-list (Announcements from the director of the ARRL NE
division)

To join any or all of the above:

Send a message to:

majordomo@netcom.com

In the body of the message, type:

subscribe list_you_want

Since there appears to be no hope that Netcom will ever improve its
mailing list services, w1aw-list has been moved to a server down at
ARRL headquarters. See Jeff Bauer's entry for more information if you
wish to continue to receive W1AW bulletins.

There is no need to unsubscribe from the Netcom list. I'll take care
of that myself.

Thanks again for your support and patience with my w1aw-list over the
years. Note that this change will not affect any of the other
ham-radio related lists at Netcom.

NEWS, INFO, RUMORS, DXPEDITIONS, IOTA ACTIVITIES and more

DX CALENDAR, WABA AWARD (rules & scores) now available

in English Version and Italian Version

Same server of the IK4LZH site for QSL MANAGERS.

I am an IOTA chaser, I work DX and I join contests. Actually I'm in
love with RS sats and DOVE telemetry. I'm the Shortwave Listening
(SWL) coordinator of the Italian Amateur Radio Association and I have
a regular SWL page in their official magazine Radio Rivista. Recently
I joined the 425 gang that produces the 425 DX News bulletin. I
translate it into English and send it to many DXers via E-Mail. I also
maintain a WWW page to provide the bulletins graphically with previous
numbers and more to come. I've been an SWL since 1974 when I received
a receiver as gift from my parents. Now I'm 36 and I'm running also a

free BBS devoted to HAM/SWL.

Rich Bono NM1D Internet: rbono@nectech.com
+1 508 635-6300 nm1d@aol.com

Author of the following MS-DOS ham programs:

* AutoExam - Examination simulator and study aid
* AutoCW - Morse Code practice program
* DOSGATE - allows users to run programs on your PC remotely (AutoExam compatible)
* AutoCall - Allows use of the Buckmaster HAMCALL CDROM online callbook with DOSGATE
* AutoFax - Allows reception of weather fax using Kantronics TNC's
* SeeSats - Real time satellite tracking (text only), DOSGATE compatible

Most of these programs are available via anonymous FTP from:

* ftp://oak.oakland.edu/SimTel/msdos/hamradio/
* ftp://wuarchive.wustl.edu/systems/msdos/msdos/hamradio/

or write me at:

7 Redfield Circle
Derry, NH 03038

and enclose:

* A FORMATTED high density diskette (either 1.44 MB or 1.2 MB; 3.5" or 5.25").
* A Self Addressed STAMPED return diskette mailer.
* A note explaining that you want a copy of AutoExam and/or AutoCW (or one of the other programs).

I am always receptive to individuals interested in maintenance, enhancements, and non-commercial distribution for these shareware programs.

Maintainer of the rec.radio.amateur.* Supplemental Archives available from:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/

[Editor's Note: Fixes have recently been made to the FTP software at
this site so that the above URL will now work with most Web browsers.]

Maintainer of the Internet Ham Radio Callbook Server at:

telnet://callsign.cs.buffalo.edu:2000/

For further information about the Callbook Server, please consult the
server's help facility, the rec.radio.amateur.misc FAQ, or additional
server documentation at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

Well, I've been talking about it for years. Those of you that have
talked with me via E-mail know that. But this time I've actually
started on my rewrite of the callsign server at Buffalo. And I've
finally got a design that I'm happy with. The new searching
capabilities are going to be *much* improved over the current system.
I'll be getting rid of the bugs in the current telnet system and
making it available to more people. Also coming is a WWW front-end for
web surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database
look-up system. The old system was very specific to the FCC database
format because that's all that was available when it was written (yes,
the server is very, very old). But now there are a number of databases
floating around the net for different countries and I am rewriting the
system to be more flexible and to accommodate a variety of formats and
search types.

In doing so, I'll have the ability to add data for many more
countries. That is, of course, if I have the data. In order to do this
I need help. I need to get in touch with all people that have access
to databases from countries other than the US. The more up-to-date

these databases are, the better. If you have access to a database and would be willing to donate a copy to the callsign server for everyone to use, please contact me. A lot of people would genuinely appreciate it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all possible because of the server. Congratulations to the community for making this system so useful.

Work on this project has been delayed such that its completion time is somewhere in the indefinite future. In the meantime you can access the current server.

Please direct all other feedback, submissions and administrivia regarding these services to my E-mail address above.

My electronics expertise is mostly analog, but I have some insights into DSP applications that can do better in what used to be the analog dominions. I can be of the most help with low-frequency analog stuff, particularly measurements and low-level/low-noise/low-distortion applications. I breadboard with IC's, discretes, and surface mounts (which I prefer to use now, as surface mounting requires less drilling of PCB boards once they are etched). My electrical engineering education (Ph.D.) emphasized control systems. I also have a clear understanding of transmission line measurements and behavior (a personal research interest for the last 25 years or so).

Barry Buelow WA0RJT

Barry Buelow WA0RJT Packet BBS in Cedar Rapids, IA
barry@ia.net WA0RJT@WA0RJT.IA.USA.NOAM

The Tucson Amateur Packet Radio (TAPR) Bulletin Board Special Interest Group (BBSSIG) is sponsoring a working group to generate and distribute a series of information bulletins which will serve to instruct packet radio users in a variety of areas. These bulletins will be distributed via the packet network and can be retained at each BBS in a file area. An index will be provided to allow users to find information they desire.

If you are interested in actively participating in this effort and can work on a collaborative effort, please speak up. Send a message to my E-mail address above.

[Editor's Note: As this project is still very much a work in progress, and its eventual products will certainly be made available via several information sources (including the Internet) as soon as they are completed, I'm sure Barry would appreciate it if only serious volunteer contributors contacted him at this time.]

JPS Communications, Inc.

For those interested, JPS Communications, makers of DSP noise filters
and other radio-related products, has a page on the WWW. The URL is:

http://emporium.turnpike.net/J/JPS/jps.html

Also, I'm in the process of collecting links to pages relating to uses
of DSP in amateur radio. If you know of some, I'd appreciate hearing
about them. There are a lot of people experimenting with new
modulation schemes, voice compression, noise reduction, DSP IF
techniques, and lots of other interesting applications. I'm planning
to add a page with links to this information, so keep an eye out for
it, and if you have something to share, please drop me a line.

ARRL Laboratory Engineer

* Radio Frequency Interference (RFI) matters
* RF Exposure Safety/Regulations
* Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the info server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters

Association. This liaison will help your cable operator understand their responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can also get a copy of the ARRL Technical Information Service info package on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington CT 06111. This package is a reprint of an article I wrote for Communications Technology -- the Journal of the Society of Cable Television Engineers. We submitted it to "their" journal because we felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many amateur radio informational documents (including EMI/RFI files) are also available from the ARRL info server. Send E-mail to info@arrl.org with the word "HELP" in the message body.

See Cheyenne Greatorex's entry for information about the ARRL Anonymous FTP Archive and David Newkirk's entry for information about the ARRL World-Wide Web Home Page.

* mounting the rig
* useful accessories
* Keeping it Simple (avoiding task overload)

I have agreed to provide a new home for the "Boat Anchor" mail list, with the blessings of Paul Prescott, N1AAC, who took over from Our Esteemed Founder Jim Lockwood, KM6NK. I have also agreed to take over the rec.radio.amateur.* Working Group mail list, formerly maintained by Ian Kluft, KO6YQ. In addition, a new mailing list devoted to homebrewing tube transmitters and receivers ("Glowbugs," a sort of intersection between Boatanchors and QRP) has been created.

The mailing list addresses are:

* boatanchors@theporch.com (*)
* rra-wg@theporch.com
* glowbugs@theporch.com

Use these addresses for messages of general interest to the entire group. Please don't use them to subscribe, change address, etc.

(*) Effective 15 March 1996, the BoatAnchors list went to a subscription-only list, with $12 US per year as "dues" to support the list.

With monthly costs for Net access at $350 US/month and telephone line charges of $50 US plus, we are not getting rich. The fee was set after much consultation and wrangling, and was designed to cover the costs of running the list... and hopefully provide a surplus to upgrade the services we can provide, like better mail delivery, larger archives, etc.

The new automated list manager address is

listproc@theporch.com

Use this for subscribing, unsubscribing, getting archived info, getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe boatanchors <your name>" or "subscribe rra-wg <your name>" Similarly, to unsubscribe, replace "subscribe" with "unsubscribe"

The new list owner address is

listown@jackatak.theporch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

I am 36 years old, have been a ham for 22 years, and currently hold an Extra class amateur license. I got my first ticket when I was 14 years old, thanks to my Elmer who is now a silent key.

I am an instructor for amateur radio classes, Novice through General, and teach CW at least once per year. I am also the VE team liaison for the TEARA VE team, and test monthly in Smithfield, NC.

I maintain a number of repeaters from 10 meters through 900 MHz including ATV. I build a lot, and enjoy restoration/construction of vacuum tube amateur gear.

I enjoy ragchewing and DXing, with about 75% of my operating time on HF spent on CW. I also enjoy weak signal and FM operation on 6, 2, 1.25m, 70cm, and 33cm. I am experimenting on 23cm and 10 GHz.

I maintain a number of sites, some of which are related to amateur radio. The URLs are:

cingersn@bdam.win.net

Navy/Marine Corps. (NAVMARCORPS) MARS

(Maine Area of Region ONE)

ampr.org IP Coordinator for Maine subnet (44.118.xxx.xxx)

I can get just about any answer needed for TCP/IP, if I don't know it myself. I have a close friend who will know the answer (he doesn't have E-mail access).

I am more than glad to offer my assistance. Being up here in the "sticks," I remember how difficult it was to find assistance back when I became interested in Amateur Radio.

[Editor's Note: All ampr.org coordinators are listed in the document at:

ftp://ftp.ucsd.edu/hamradio/amprnets

I am an Advanced class operator, working on Extra. I work professionally as a manager of a computer services department in a large hospital system with more than 12 years experience in PC and Host Systems networking, I hold a degree in Electronics Engineering, as well as many hours in Computer Science Engineering. I operated a land-line BBS for 8 years, and now maintain a packet mail drop on 145.01 MHz. I maintain the TriCounty Amateur Radio Club (TCARC) of North Texas home page on the web:

http://www.why.net/home/kb5ylg/tcarc/index.html

and am the 1996 President of the TCARC. I am also the appointed Emergency Coordinator for the City of Azle for Tarrant County RACES.

I like to give talks to Amateur Radio Clubs, school groups, Scouts, and similar groups, mainly about Amateur Radio topics. Recent presentations I have done include Field Day preparation for clubs, Computers and Ham Radio, Building Your First Dipole. I'm open to presenting other topics as well. I also help local amateurs to prepare their own presentations and talks.

I am a Baptist minister, and would be delighted to administer a Ham Radio theme wedding! <grin> I would also provide ministerial services for Ham related special events.

I will also provide free Novice/Tech licensing instruction for groups of 5 or more in the Tarrant/Parker/Wise County region of North Texas. Typically this involves about 18 hours of lecture, and some self study on the parts of the students. I'll do this free for nonprofit endeavors.

P.S. I monitor 146.98 Boyd repeater while commuting, and you might find me working HF CW just about any time.

Phil Karn KA9Q

karn@unix.ka9q.ampr.org

http://www.qualcomm.com/people/pkarn/

High-Performance Software Modem Project

Recently I've been working on a prototype SQPSK (staggered quadrature
phase shift keyed) modem for the amateur satellite channel. This modem
is implemented totally in software running on a PC with an ordinary
(non-DSP) Soundblaster card. It runs at 1200 bps and fits into a SSB
transceiver bandwidth.

I've made good progress and have put some info up on my web page about
it, including an audio file to show what it sounds like in noise when
the signal is still copyable, available from:

http://www.qualcomm.com/people/pkarn/ham.html

Watch that page for an announcement of when I actually release the
code, which I plan to integrate into KA9Q NOS.

Spread Spectrum

I've been trying to answer the question of consequences of promoting
relatively wide-band digital modes on band occupancy and throughput
(i.e., What gets optimized? Are there tradeoffs in quality vs.
quantity?) in the context of the spread spectrum rules debate, but I
think it needs to be a much wider discussion. See my reply comments to
the FCC on this issue:

http://www.qualcomm.com/people/pkarn/papers/mysscomments.html

(See also Steve Bible for more information on Spread Spectrum)

[Editor's Note: I'm honored by the presence of many advanced-level Elmers in this directory, including Jeffrey Angus, Gary Coffman, and now Phil Karn. Phil has graciously agreed to appear in this directory for the purpose of elmering and technical exchange for the advanced topics listed above. As with all of my Elmers, please respect their time by only seeking assistance from them for the topics under which they are listed. There are many Elmers willing to answer more beginning-level packet radio questions, including basic questions about IBM PC hardware, TCP/IP and NOS. Consult the "IBM PERSONAL COMPUTER (PC) AND CLONES" and "PACKET AND DIGITAL NETWORKING" categories in the Subject Quick-Search Index for a complete list.]

Paul Keezer NX1P

logview@keez.tiac.net

Finally a WWW page has been set up for HamView products, a Windows based Ham Radio program. This page can now be located at:

http://www.tiac.net/users/pkeezer/hamview/

There is an upgrade file right now for Win95, but the bug has only been corrected in Logview 5.0. Come and check us out.

Raleigh, NC 27695-7620

rdkeys@csemail.cropsci.ncsu.edu

de NA4G, "Boat Anchor Bob", an ol' cw fart .....

If I can be of assistance in older equipment, junk-boxing your way to hamdom, the cheapskate's approach, let me know.

22 yrs a ham, extra class, mostly cw, mostly boat anchors and radio in the traditional sense.

{Telegraphy has been in my family for almost 100 years!}

CWISTS Friday Night Fist Function

Standard time: Friday Nights at MIDNIGHT LOCAL TIME

Standard freq:
80 meters --- 3702.5 kHz for all hands.
40 meters --- 7102.5 kHz alternate, for all hands
(between the heterodynes, someone scout out a better QRG)

Standard calling signal:
CWIST IMI DE <yourcall> K (if there are no control stations calling for you to check in), or, CWIST DE <yourcall> K (if there is a control station inviting checkins) (The alternative check in for those OTs with salt behind the ears is a simple DE to get the control station's ears followed by DE <yourcall> K when the control station acknowledges.)

Note:
A simple informal net style protocol will generally be used, unless no control station assumes control for the evening, in which case it is an open roundtable format discussion group.

Note:
The midnight local time gathering is designed to maximize the number of checkins spread out over the world, so less confusion and more checkins are heard. The hope is that someone will be aboard almost anywhere and be heard at least locally, anywhere in the world.

Definition:
A CWIST is a person with an active interest in the PRACTICE and USE of continuous wave radiotelegraphy as directly is applicable to amateur radio. Such PRACTICE and USE may take the form of learning about radiotelegraphy and its history in amateur/commercial areas, its application to radio telecommunication, the practicing of the art and craft of radiotelegraphy, and the refining and developing of the technology of radiotelegraphy.

Author of NA4G's National Electrical Code for Hams

ABSTRACT

This work was presented as a talk to the Homebrew Special Interest Group (HB-SIG) of the Raleigh Amateur Radio Society (RARS), on 15 January, 1991 and was revised for another presentation on 26 January, 1994.

This document contains excerpts of the National Electrical Code (NFPA 70-1990) that, in the author's opinion, apply to the installation of amateur radio equipment as would commonly be found in most amateur radio stations. Direct excerpts from the Code are contained within inset quotations. Paraphrased excerpts from the Code are itemized. The author's interpretation and discussion of the Code is set full-width. The author's interpretation and

discussion of various sections of the Code is not meant to
be all-encompassing, nor the official interpretation of the
National Fire Protection Association, nor of any official
governing body having legal authority of jurisdiction over
electrical installations, but is meant to be used as a
teaching tool for amateur radio operators.

For ease of access, the group of files have been 'rolled into one'
both in tar-compress (862K, for UNIX jocks) and PKZIP 2.04g (732K, for
MS-DOS users) formats. Both are available from:

ftp://sunsite.unc.edu/pub/academic/agriculture/agronomy/ham/things-to-
build/na4g/

Robert A. Kile KG7D

midnight@accessnv.com

A Current list of Dealers and Manufacturers of Amateur Radio Equipment
in North America is now available on HR Showcase Amateur Radio WWW.
The URL is:

http://www.accessnv.com/hrshow/

The listing will be updated as more come on line. Enjoy!

Fred Lloyd, AA7BQ flloyd@qrz.com
Scottsdale, Arizona | finger flloyd@qrz.com for PGP Key | http://www.qrz.com
- --

Author of the QRZ! Ham Radio CDROM

I am interested in receiving amateur-radio-related public-domain
and/or shareware programs, data bfiles, frequency lists, etc., that
would make a useful edition to the QRZ! CDROM. Can help arrange volume
discounts for clubs and groups, and will donate copies of QRZ! to

qualifying non-profit organizations. Send E-mail or call +1 602 483-2036.

We now have the QRZ! FTP archive and QRZ! WWW server online, 24 hours a day. Our connection is via a T1 line so you should get pretty decent file transfer times.

We've got about 7,000 files online, including radio mods, software, most everything imaginable. We are also accepting uploads of all ham radio related material.

Feel free to stop by and have a look:

* ftp://ftp.qrz.com/
* http://www.qrz.com/ (WWW interface to the FTP archive as well as a Callsign database server)

Authors of ham radio shareware programs, data files, mods, etc., are invited to contribute their materials to the QRZ! anonymous ftp server above.

I would also like to thank those who have volunteered in helping port the QRZ! source code to a wide variety of platforms. In the next edition, we'll have support for DOS, Windows, OS/2, Windows NT, Sun, NeXT, SGI, Linux, AIX, and HP/UX executables, directly on the disk.

Notably not mentioned is Macintosh, which so far has been a bit troublesome to put together. If anyone who can program in 'C' on a Macintosh would care to volunteer, please let me know. Although there is an experimental Mac interface at this time, I'd like to make it an officially-supported platform.

The QRZ! Callsign/E-mail Registry now contains over 4100 callsign-to-E-mail-address listings and is growing daily.

We have a WWW page where you can input your E-mail address directly into the QRZ! Callsign Database, where it will be published on both CDROM and on the Internet. When you use this page, your E-mail address is made instantly available to the online database.

Everyone is encouraged to check in and add their E-mail address to the server. There are no charges or listing fees, and it's free to all radio amateurs. The procedure takes only a second, and you are only asked to supply your callsign and E-mail address.

Register your E-mail address today!

We're pleased to announce that the online FCC database at qrz.com is now updated nightly from the FCC with fresh information.

According to FCC rules, if you've just passed your first test, you can begin operating as soon as your callsign shows up in the online database.

Please pass on any ideas, suggestions, comments, etc., to my E-mail address above.

Luther M. Lord N4DA

n4da@mindspring.com

If you need a good place to get your amateur radio repaired, I can help. Visit the Radio Doctor's home page at:

Rusty Carruth N7IKQ

Rusty Carruth aka N7IKQ aka rusty@indirect.com (NIC: RC541)

The Phoenix Linux User's group has formed! Details: me.
Join the Usenet Un-Net: 1700-1900Z Saturdays, 28.410 or 28.390 MHz

I'm willing to act as a reference for anyone wanting info on getting tapes (especially Callsign tapes) from the Department of Commerce National Technical Information Service (NTIS) or wanting other info on callsign-project related stuff.

One of these days I'll actually be around for the un-net! I promise, really!

My job is currently System Administrator for a large UNIX site so I know a little bit about day-to-day UNIX operations and UNIX installation :-) I also have much experience with constructing E-mail paths that will work rather than bounce.

I also have a fair amount of experience in hardware/software interfacing and machine control.

I'm the 425 DX News Mailing List maintainer. Further info at:

http://www.fr.flashnet.it/cgi-bin/425dxnews-list

I'm the webmaster for:

http://www.fr.flashnet.it

(maybe soon www.saiu.it) and the FTP owner of:

ftp://ftp.fr.flashnet.it/

There's a /pub/ham directory there. There's not much at the moment but
you may use it if you want. Just send new software under /incoming
including a file which tells what kind of software it is.

Expertise includes anything related to the Internet.

I used to work HF, mostly CW and QRP.

I also love Linux but never used it for ham radio, except for a
satellite tracking software :)

10-X International Mailing List:

To subscribe, send E-mail to:

listserv@lehigh.edu

and in the body of the message, write:

SUBSCRIBE tenten-l your_name your_call

where "your_name" is your real name, and "your_call" is your callsign, if any. For example:

SUBSCRIBE tenten-l John Doe K5FJZ

A welcome message with more detailed help will follow shortly.

To unsubscribe, type:

UNSUBSCRIBE tenten-l

(10-X International is an amateur radio organization devoted to encouraging the use of the 10 Meter, or 28 MHz, amateur band. They are primarily known for their "10-X" numbers which members exchange during communications on that band.)

I serve as an Educational Advisor to ARRL and hence fall within the loose bounds of their field organization. I know something of the fundamentals in electronics, having written the current Chapter 6 of

the 1995 ARRL Handbook, and something of antennas, with a series appearing in Communications Quarterly. I serve on the Board of Directors of 10-X International and maintain memberships in most of the QRP organizations, as well as the Quarter Century Wireless Association (QCWA). As to what I do not know, there are no limits.

I also know something of the craft of technical writing and editing, being director of Techwright, an occasional consulting operation in this field with my wife, Jean, N4TZP, who has been a technical editor and writer since 1980.

ARES

Team Leader, W5YI VEC

(Exams for Del Norte County every other month)

I've been a ham since 1933. I taught electronics, AC, DC, and radar principles/theory at the U.S. Army Signal Corps School at Fort Monmouth, NJ during World War II. I was chief engineer at KDB in Santa Barbara, CA from 1946 to 1951. I was engineer and technical director at NBC TV studios in Hollywood and Burbank from 1951 to 1982. I have one student now going for his General and prefer to teach the overall picture. I have done little or no benchwork on new equipment in the last 15 years. I'm still learning digital theory and techniques, but boards filled with chips do not evoke a sense of familiarity or recognition. I'm also still learning about the Internet.

GRAPES 56 kBaud Packet Radio Modems

I'm not an official representative of the Georgia Radio Amateur Packet Enthusiasts Society (GRAPES), but I am in contact with them, and have experience using their 56 kBaud radio modems. At the very least, I can forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by WA4DSY explaining the theory and practice of the 56 kBaud radio modem. (I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem, but there are better solutions. The Ottawa PI card and the Gracilis PacketTwin card are two good solutions. Of course they are PC bus cards. If you need standalone capability, the Kantronics Data Engine can handle it, as can the incredible Gracilis PacketTen. PacComm claims their new Sprint TNC can, too (PacComm now also manufactures the Gracilis cards under license and you can get them either from them or from Gracilis direct).

WA4DSY has interfaced raw telco codecs to the modems and done "digital voice" while mobile. It works quite well.

If you want information on the RF modem (full document sets are $20 US, creditable towards a later order) write to GRAPES at

GRAPES, Inc
PO Box 636
Griffin, GA 30224-0636

GRAPES is a volunteer networking organization. There's no phone number, and turnaround on info requests may be slower than when dealing with commercial outfits. Please cut the volunteers a little slack.

(The GRAPES WWW Home Page is moving to its own dedicated machine at a new ISP. This will give GRAPES direct T1 access to the Internet. It will provide comprehensive GRAPES information, support, and online ordering facilities. I'm told this will all be up and running in a few weeks. Bruce Nebergeld and Dennis Barrow, both former GRAPES presidents and net wizards, are spearheading this effort.)

Derrick C. Cole KC4WEJ

dcc@ssds.com

I'm a Network/Systems Analyst with a national systems integration firm. My professional fortes are UNIX-based system administration, sendmail, TCP/IP-based ethernet network engineering, network systems security (including firewalls), and programming (primarily Perl and C).

I've had notable success dealing with issues surrounding PC's, DOS, Windows and various applications/protocol stacks, including PC-NFS and LAN Workplace.

I'm still clueless in the electrical/circuit department.

Relayer of Amateur Radio Newsline Bulletins

Amateur Radio Newsline is produced as an audio service by Newsline, a service of the Westlink Radio Network. The transcribed version is
~~~~~~

produced by Dale Cary, WD0AKO from materials provided by Newsline, and is jointly distributed to online services and bulletin board networks by Steve Coletti and Dale Cary.

Copyright owner is Newsline. Permission to reuse all or part of either this written or the audio form requires that the item be taken in its entirety, not be subject to any further editing or commentary, and that full credit be given to Newsline as the source.

Permission is granted to all amateurs who want to transmit the audio version in its entirety over nets or repeaters. The text version may be used for packet distribution as long as it is sent in its entirety and the BIN header is kept intact.

NOTICE: When Newsline is transmitted in its full form over voice or digital forms of Amateur Radio, it is recommended that the closed circuit advisory be deleted. Audio, Computer, and Packet retransmissions must be made without the editing or deleting of any other part of the Newsline content. Unauthorized additional commentary to the original message is also prohibited. To do so is a violation of copyright and subjects the initiator to legal action by Newsline.

Newsline may also be excerpted for code practice transmissions, and may be used as a reference source in bulletin board discussions under acceptable Fair Use practices.

Any other use is not allowed without the expressed permission of Newsline.

Editorial comment, news items and all other business should be directed to

Bill Pasternak, WA6ITF, Newsline's Producer and Editor-In-Chief.
E-Mail - 3241437@mcimail.com or BILLWA6ITF@aol.com

Maintainer of Advanced Computer Controls (ACC) and Link Mailing Lists

The ACC list has approximately 60 members at this time. I am trying to restrict the list to only ACC users (control people) and owners. The list is also supported by the new owner of all the rights to ACC, Link Communications. I am also running the Link repeater controller list server. It has approximately 90 members at this time.

The way to join the list server is to send me a short E-mail and tell me what equipment you are using.

(Note: I have no ties to Link Communications or ACC. I started the Link list first and found how useful it is. I had a lot of requests to start the ACC list and did it.)

USAF MARS Region 2 Packet Manager

William (Bill) Coyle N3OGH

wcoyle@iss.dccc.edu

AX.25: N3OGH@AA3CH.EPA.USA.NA

My primary experience is with HF communications, particularly with the Kenwood TS-830S and TS-940/AT. My preferred mode is CW, although I also use SSB. I have had experience with light service on both rigs (including the internal antenna tuner on the 940 and the tube finals on the 830). I have the service manual for the 940.

I am particularly interested in helping new hams design and set up HF stations with multi-band wire antenna arrays.

Other than HF, I am also involved in VHF and UHF, particularly 2 meters, and have recently gotten involved in packet radio (having gained some experience on the hardware end of setting up such a station).

Michael Crick

mica@crick.com

Bellevue, WA

http://crick.com/mica/

I design and write software. I have written a top of the line Ham Radio training program for Windows called "Ham University". You can

download a free demo copy from my web site.

I also helped write Microsoft Windows. I am not a ham operator but more of a web nut (I was part of the group at BBN that developed the ARPANET back in 1967). However, in designing Ham University, I got a lot of expert advice. I think it will meet many people's training needs.

mdaless@ocf.berkeley.edu

I cannot claim to be an expert in any field, but I did participate in SAREX as the project coordinator for our school (The Branson School) in the STS-64 mission. I will be happy to help anybody else who is interested in any and all aspects of the SAREX project. I also know a little bit about UNIX administration, but I find myself asking questions more often than answering them.

I am a high school senior, so my real area of expertise is getting young people involved in ham radio. I was a speaker at the Dayton HamVention Youth Forum, and am active in recruiting in my local community.

I've been an active Linux advocate since it first appeared on the
Internet. I was looking for an operating system that would better meet
the needs of my interest in Amateur Radio and provide me with an
environment in which I could actively experiment and develop. Linux
provides that and I've been promoting its use within Amateur Radio
ever since.

I'm an early contributing member of the Linux Documentation Project,
and you'll find the amassed works for it at:

http://sunsite.unc.edu/mdw/

ampr.org IP Coordinator for Sydney, Australia Metropolitan Area subnet (44.136.xxx.xxx)

(I'm also the co-administrator of the Sydney University of Technology Internet/ampr.org gateway.)

I'm happy to assist with information relating to:

* Linux, especially when related to Amateur Radio.
* Amateur Radio Internet Gateways

North American Digital Systems Directory World-Wide Web Page:

(Sponsored by Tucson Amateur Packet Radio, TAPR)

http://www.tapr.org/directory/

The purpose of the Digital Systems Directory is not to manage, coordinate, or regulate the usage of digital systems, but to provide the most up to date and accurate listing of digital systems that can be provided. Neither is it a formal organization, but a mechanism to allow regional groups to provide and share information regarding digital systems.

The Digital Systems Directory listing is intended for use by individuals to further their enjoyment of the hobby and by organizations to help plan and develop digital networks.

Please direct any submissions, feedback, or administrivia to my E-mail address above.

76 McDonald Street S Kentrol FTP Site:
Arnprior ON K7S 2W5 Canada ftp://ftp.synapse.net/private/k/kentrol/

Kentrol is a Windows 3x control program for Kenwood HF transceivers and the R-5000 receiver, which has built-in logging and memory-management capabilities. Since its introduction in 1991, Kentrol has set the standard for Windows-based rig automation, and new features continue to be added regularly. SkedMan is an automated sked manager for Kentrol. Enter schedule data, set alarms, and when an alarm goes off, SkedMan uses - even launches - Kentrol to tune it in.

Kentrol and SkedMan are shareware, so if you haven't tried them, you are most welcome to do so.

I am into public service, and also ARES/RACES. I am the Emergency Coordinator for both organizations in Sonoma Valley, Sonoma county, San Francisco Section of California.

We do ARES and RACES as one program here, and actually lean more towards RACES because the government entities are so supportive.

I like to encourage newer hams to participate in the events for which I coordinate the communications. It's ideal training for emergency services, and it's fun, too. Codeless Technicians who can't participate on most HF NTS traffic nets have a real role to play here, as we generally use VHF and UHF, and these amateurs are instrumental with their enthusiasm in filling the rosters.

It's also sometimes a good initiator for those new hams who are self-conscious talking with other, experienced hams one-on-one, but are OK talking formally to a net control station. Similarly, I try to encourage those new hams who became hams so they could talk to their ham spouses, and all you ever hear them do is talk to their spouses and to no-one else. While that's perfectly OK in and of itself, public service is a good way to break out of that mold and get more fun from radio while really helping out.

Dean R. Madsen KE0WO

Dean R Madsen, KE0WO Computer Science Major
Internet: dmadsen@iastate.edu Iowa State University
ke0wo@iastate.edu Ames, Iowa
AX25: KE0WO @ KE0WO.#NWIA.IA.USA.NA
Secretary for the Tristate Amateur Packet Association
Treasurer for the Cyclone Amateur Radio Club

A few members of our ham radio club were interested in helping out. Since our turnover is usually 4 years or so (graduation is a horrible thing), I thought it may be difficult for us to keep the list up to date. I thought that by creating a local mailing list called elmers@iastate.edu we could add or remove people as need be. There would always be at least one person receiving mail on that list, usually more! Even after I graduate, this list will be maintained allowing ISU hams to easily help others.

Currently we have people with packet experience, some HF experience, much repeater experience, in addition to a considerable background in theory, as many here are electrical engineering or computer engineering students. If a question can not be answered by the readers of the list, there are many other local hams that could be prodded for the info.

Our local ham radio club has been especially interested in helping local disabled hams (or hams to be) get on the air. But anyone local who needed help would find a group at their door ready to work.

Fred O. Maia W5YI

3511297@mcimail.com

http://www.w5yi.org/

The W5YI Group, Inc.
P.O. Box 565101
Dallas, Texas 75356
Tel. +1 817 461-6443

This firm consists of two separate divisions:

EDUCATION DIVISION:

Develops and distributes amateur radio self-training materials, including the Gordon West/WB6NOA line of audio, video, computer software and printed study materials. Credit card orders and information from (toll free): +1 800 669-W5YI (9594). All materials are guaranteed current and shipped within 24 hours with 2-day priority delivery. They offer a special discount for instructors conducting training classes.

W5YI Amateur Radio written license exam and Morse code training products are also available from every Radio Shack nationwide. Color photograghs of the major training products are available at their Express Order or Radio Shack Unlimited desk.

THE W5YI-VEC:

Coordinates the activities of more than one thousand volunteer examining teams world-wide. The locations of test sites near you can be determined by calling +1 817 461-4663 anytime, including evenings and weekends. Any General, Advanced or Extra Class amateur may form their own VE team by calling +1 817 860-3800 during normal business hours.

All examination results are electronically filed with the FCC. Amateur radio licenses and call signs are normally issued within 48 hours of VEC receipt of the examination paperwork. New amateurs may determine their call signs by calling the FCC's toll free consumer assistance line: +1 800 322-1117.

April Moell WA6OPS

emcom4hosp@aol.com

Hospital Disaster Support Communications System (HDSCS) Coordinator

HDSCS World-Wide Web Page:

http://members.aol.com/emcom4hosp/

For over 15 years, the 90-plus members of the ARES/RACES-affiliated
Hospital Disaster Support Communications System (HDSCS) of Orange
County, California have served over 35 hospitals in nearly 50
emergency situations. At the new HDSCS site on the Web, you can find
out how volunteer Amateur Radio operators can be an important backup
communications resource for hospitals, if the hams are well organized
and trained.

There you will find:

* How HDSCS organizes to support hospitals
* What "dedicated communicators" are and why they are important
* Frequently Asked Questions about hams helping hospitals

* The surprising answer to "How often do hospitals need hams, anyway?"
* Response from hospitals served by HDSCS
* Info given to new HDSCS members
* Recruiting hams for hospital communications
* And lots more...

homingin@aol.com

Homing In Column World-Wide Web Page:

http://members.aol.com/homingin/

(Homing In is a column in 73 Magazine featuring information about radio direction finding, hidden transmitter hunting, and jammer tracking.)

This site features:

* Southern California T-hunting, what equipment the winners use
* International-style foxhunts have come to California
* Complete design fixes for the Dick Smith doppler set
* Updates to the Moell/Curlee book (TRANSMITTER HUNTING---Radio Direction Finding Simplified), including board/kit/parts sources and building tips
* Frequently Asked Questions and answers from the Homing In mailbox
* Index and subject list of all Homing In columns in 73 Magazine through September 1996 (over 90 articles)
* And lots more...

The Homing In site is written and maintained by Joe Moell K0OV. It is not affiliated with 73 Magazine, Wayne Green Enterprises, or any other commercial entity.

Lyndon Nerenberg VE7TCP, VE6BBM

lyndon@ve7tcp.ampr.org

I'm heavily involved in Internet Protocol (IP) networking over packet,
as well as system administration of UNIX and UNIX-like operating
systems (with an emphasis on networking, E-mail, etc.). My current
concentration is on writing UNIX based tools (e.g. software for
logging, antenna design, propagation analysis) that can be shared

throughout the ham community.

I also maintain the ve7tcp.ampr.org server. This system hosts a variety of ham-radio related mailing lists as well as a comprehensive World-Wide Web site and FTP archive, and was one of the first Internet servers dedicated to ham radio. The system is also a hub site for the ampr.* newsgroups.

Information on the mailing lists offered can be had by sending an e-mail message to:

listserv@ve7tcp.ampr.org

containing (only) the word:

INFO

in the message body. The WWW server is located at the URL:

http://ve7tcp.ampr.org/

and the FTP server resides at:

ftp://ve7tcp.ampr.org/

Direct login access to the system is available to anyone holding a currently valid amateur radio license. The server provides a number of useful tools for the radio amateur, including satellite tracking software, CAD design software, SPICE, and other tools not generally available to people running on Microsoft Windows or Apple based PC's. (It runs 4.4BSD UNIX.) To obtain a login on the server, send a photocopy of your current amateur license, along with a SAE and IRC to:

Lyndon Nerenberg
1804 Juniper Street
Prince George, British Columbia
Canada V2L 1N7

Your login and password information will be mailed to the address listed on your license.

Maintainer of the Internet DX Mailing List

To subscribe, send an E-mail request to:

dx-REQUEST@ve7tcp.ampr.org

with the following line in the message body:

subscribe dx

David Newkirk W9VES

webmaster@arrl.org

American Radio Relay League (ARRL) Webmaster

The American Radio Relay League is pleased to announce the startup of ARRLWeb, your League's new HQ-based World-Wide Web site, at the URL

http://www.arrl.org/

ARRLWeb will serve as an essential Internet resource for active hams, carrying ARRL news, details on upcoming hamfests, conventions and Amateur Radio examinations, the ARRL Publications catalog, information of ARRL membership benefits and services, and more.

In inaugurating this new service, the League thanks Scott Ehrlich, WY1Z, and the other Boston Amateur Radio Club volunteers who've worked since December 1994 to keep ARRL up and coming on the Web via the ARRL home page they installed and maintained at oak.oakland.edu. Their volunteerism helped show us that upgrading our Internet connection to a level that allowed on-campus Web service would be essential to ARRL's mission of serving Amateur Radio.

Your comments, criticism and suggestions on how to make ARRLWeb bigger and better are *essential* to its ongoing success, so please drop by and say hello!

Bruce Perens K6BP

perens@hams.com

Maintainer of Linux for Hams CDROM

What Is Linux for Hams?

Linux for Hams is a full-featured Linux system with special additions for Amateur Radio. The system includes all of the sophisticated software that one would expect on one of today's engineering workstations, along with software for packet radio communication, electronic design, printed-circuit manufacture, a database of FCC rules and license exams, a code-practice program, and other Amateur Radio applications.

The general-purpose software includes software for connecting to the Internet, compilers for the C and C++ languages, a full-featured typesetting system, a symbolic mathematics program, CDROM authoring tools, and many other programs. Unlike other Amateur Radio software collections, Linux for Hams is an integrated system. The programs are already compiled and configured to work together with the rest of the system.

Linux for Hams is being built by Bruce Perens AB6YM, with the help of several volunteers. Of course, it builds on the work of the thousands of volunteers who helped create Linux and the other programs it contains.

The system will be available for free if you download it using FTP. A low-cost CD will be available, for about $30 US.

Free CDROM Subscription for Volunteers

Most of the software in Linux for Hams is free software, contributed by its author for anyone to use. I would like to compensate those authors for their work. If you are the author of a significant piece of software included in Linux for Hams, please E-mail to

Perens@Rahul.net. You may be be able to get a free CDROM subscription to Linux for Hams.

Bruce Perens AB6YM reserves the right to decide who gets free subscriptions, what is included in a free subscription, and for how long those subscriptions last.

For more information about Linux for Hams, check out the WWW page:

http://www.hams.com/perens/LinuxForHams

or send E-mail with the word "help" to:

info@hams.com

[Editor's Note: This project seems to be delayed as the result of schedule slippages with the Debian version of Linux. For more information about the status of the Debian Linux System, please contact David Engel at david@ods.com.]

Keith Petersen W8SDZ

Peter Reynolds (KE4BAD) E-mail: reynolds@stc.nato.int
Voice: +31 70-314-2410 FAX: +31 70-314-2111
Senior Scientist, Radio Branch, Communications Division
SHAPE Technical Centre, PO Box 174, 2501CD The Hague,
The Netherlands CompuServe: 100276,1340

I am very lucky in that I earn my living in radio communications, so
my expertise is fairly broad (but not focused on amateur techniques
only):

* Modulation types - FSK, PSK, MSK
* Error control - various types of ARQ and FEC systems

* RF - Antennas, HF propagation
* Networking - TCP/IP over HF
* Frequency bands: VLF, LF, HF, VHF, UHF, SHF

This is a very brief synopsis of the areas that I have dealt with over the years. I always enjoy discussing and researching a communications problem so if you don't see it listed above drop me a line anyway, especially if you happen to be in Europe.

Chuck Rippel WA4HHG

crippel@exis.net

Secretary, Collins Collectors Association

The Collins Collectors Association would like to invite those of you who have an interest in Collins Radio to subscribe to the now fully automated Collins Reflector. This service is sponsored by the CCA and is provided at no charge to Collins enthusiasts.

There is an FAQ which will hopefully be sent to each new subscriber when they "sign on." If you would like one and don't get it, drop me an E-mail at my address above.

There may be a few initial bumps and glitches at first but we hope those of you who choose to participate will enjoy it.

As of 1/6/97, the Collins Reflector will be fully automated and I will discontinue forwarding the mail manually as in the past.

The new automated list processor will be a real upgrade. It will enable you to get the material in nearly real time and does not require me to forward each message manually. You will get the material much quicker than before. The Collins Listserver behaves much like the Boatanchors list. Simply, you subscribe to the list, send it messages which it then "reflects" back out to all those who subscribe. This is done once every ten minutes.

You must resubscribe to the new listserver in order to continue to participate. The automated list server follows the same guidelines contained in the CCA FAQ. Please continue to follow those guidelines for posting and contributing.

Here is how to subscribe:

Send an E-mail message to:

listserv@listserv.tempe.gov

Leave the Subject header of the message blank and in the body, simply type:

subscribe collins

The listprocessor will output an E-mail message back to you with easy to follow instructions asking for your confirmation. At that time, you will be asked to send a second E-mail message to the listserver. Follow those instructions exactly and send the second, confirmation, message to the listserver.

If all is successful, you will be signed up to the list and a complete set of instructions will be sent back to you in the form of an E-mail by the automated list server.

Finally, a very big thanks to Dave Kelly, AI7R and the City of Tempe, AZ who have graciously provided and set up the server. Dave and the Collins Collectors Association sponsor the Collins Reflector as a no charge benefit for Collins afficionados everywhere. Enjoy!

* Volunteer Examiner (W5YI)

I suspect that I would be classified as a "classic" amateur operator. While not a proficient homebrewer/RF designer (yet), I pride myself on the ability to construct equipment from kits, as well as being able to competently debug and fix the equipment I use - this is a set of skills that is becoming too rare in our "appliance operator" world.

While many see a need to run high power and large antennas, I do not. I live in a development with antenna restrictions, and I choose to not expose my family and neighbors to high RF fields.

This has led to my love of QRP (low power) operation. Working from the eastern U.S. into Germany at 100 Watts is pretty neat - but to do so on 1/2 Watt? A flashlight uses more than that, and it's being seen some 4,000 miles away, AFTER bouncing off the ionosphere TWICE!

I also enjoy an occasional contest, although I am more relaxed about operating than the annual "winners." I always operate on Field Day with fervor, last year assisting the University of Maryland in making 205 QSO's (most of them CW) at 4 Watts of output power into wire antennas.

I greatly prefer CW over phone. I can frequently be found on 2m repeaters during trips and the drive to and from work.

I have confirmation of contact with 138 countries and have earned my WAS and WAC awards. I have been a Volunteer Examiner since age 18, and a ham since age 15.

I get a great deal of joy from watching others learn something new, and then embrace it as their own. Ham radio is a wonderful way to become involved in public service and a great, technical, hands-on hobby that can lead to careers and a lifetime of enjoyment. I find great pleasure in making others aware of it.

Bill Roth N7RYW

n7ryw@teleport.com

AMSAT-NA Life Member #2109

I am the AMSAT coordinator for the Portland, Oregon area and I do a lot of the "Elmering" in this area as well as steering people toward others.

This would be for satellites only, as I am not doing HF anymore.

I am currently set up for all of the digital and analog satellites, all modes including AO-13 Mode S and weather sats.

I would be happy to assist people with getting started and beyond in all areas of satellite operations.

Henry Ruh KB9FO

atvq@aol.com

Amateur Television Quarterly (ATVQ) Magazine

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions (FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices in US funds are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

I can try to answer questions on here, and frequently do, but time is expensive and limited!

John Rymell N3PFF

ryme@husky.bloomu.edu
Bloomsburg University
Bloomsburg, PA

Over 25 years in electronic/computer service work. Enjoy designing, building and operating vacuum tube and solid state equipment. Experienced in wire antenna and tuners, SWL, and Amateur Radio. Have real enthusiasm for building just about anything from next to nothing (:^)! Glad to help those in need.

* Antique and Older Equipment
* HF
* Homebrewing
* Chemical Safety

I can help people with HF stuff, cheap antennas, and am willing to
help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/
understanding at the burn-your-hand-with-a-soldering-iron level - is
drifting out of ham radio. With Japanese radios which cost so much,
fewer and fewer hams are willing to risk their warranty to service
their own equipment. I would like to see a turn-around here...

Club Activities, Examinations, and other events in the Omaha/
Lincoln/Council Bluffs (Eastern Nebraska/Western Iowa) area.

Also willing to provide newsreader kill/select file help to anyone
interested in customizing their presentation of the rec.radio.*
newsgroups

I would be particularly interested in mentoring/training new FAQ/Info
maintainers for the rec.radio.* newsgroups (see also Jack Hill and
John Seney for FAQ maintenance opportunities and the
rec.radio.amateur.* Working Group mailing list). To paraphrase Zack
Lau, I can't post it all myself!

I have taken over maintenance of the Perl-based auto-faq FAQ
management and posting package from Ian Kluft and would be happy to

guide new FAQ authors in its use. The latest version, 3.2pl2, is available via anonymous FTP from:

ftp://ftp.novia.net/customers/pschleck/auto-faq/

The auto-faq-users mailing list has also been re-sited at Novia. To subscribe, send E-mail to auto-faq-users-request@novia.net

with:

subscribe auto-faq-users

in the message body. An acknowledgement message will follow shortly. To unsubscribe, replace the above command with:

unsubscribe auto-faq-users

Recently I undertook some academic research into packet radio using KA9Q's Multiple-Access/Collision Avoidance (MACA) link-layer protocol. I attempted a literature survey as well as some software simulations of the protocol (with varying degrees of success). I would welcome any opportunities to improve on my work, find out about any actual MACA implementations, share information, and build on my bibliography (available on request). More information about MACA may be obtained from:

USA

I am a comunications sergeant for the U.S. Army. My particular specialty is tactical HF radio. Our primary means of communication is with 20 Watt manpackable radios with a data burst device.

I have experience with both short and long-haul HF communications and am willing to give whatever (publicly-available) information I can about antenna construction and basic radiowave propagation.

I have experience in tactical (field-expedient) antennas as well as basic radio wave propagation. I also have experience with larger less tactical antennas such as the doublet and NIVIS. Most of the antennas that I deal with are large-half or quarter-wave in length for frequencies ranging from 2 to 29 MHz.

ARRL Technical Information Service Coordinator (tis@arrl.org)

ARRL E-Mail Information Server SysOp (info@arrl.org)

The ARRL Technical Information Service (TIS) is a valuable membership benefit that helps hams find answers to difficult technical questions.

The answer to a ham's most common technical questions can be found in one of the many books about Amateur Radio. Folks who call or write to ARRL TIS staff are often referred to one of these books or to a past magazine article.

However, most hams find that the fastest way to get the answer is to do their own research. Publication catalogs often talk about what kinds of information are available in different books. A few good books will answer the vast majority of questions as well as enhance a ham's knowledge and enjoyment of this fascinating hobby.

Magazines are also a superb technical reference. An annual index of articles appears in the December issue of QST and other magazines. These indexes will usually have an article or two (or six) about a particular topic. If an older QST or QEX article is not available locally, the ARRL Technical Department Secretary can provide a copy for a small fee. Back issues are also available from the QST Circulation Department.

The ARRL Technical Information Service is a valuable source of information and research for questions that cannot be answered by other means. ARRL TIS has information packages and bibliographies that are available on request to answer most technical questions.

For those who want to know if something has been previously published on a particular subject, TIS can also assist with research to locate this information. TIS also helps locate companies that sell hard to find parts or supplies used in our hobby.

Many amateur radio informational documents are also available from the ARRL E-Mail Information Server (or Info-Server for short). To find out how to use the Info-Server, send E-mail to info@arrl.org with any subject (it is ignored) and the following text in the body of the message:

Dr. Len Traubman (DDS) W6HJK

ltraubman@igc.apc.org

http://www.igc.org/traubman/

Russian Phrases for Amateur Radio:

http://www.igc.org/traubman/russian.htm

This 20-page syllabus was compiled during the Cold War by W6HJK to help amateurs better communicate with their Soviet colleagues. A 90-minute audio cassette has been added to help with pronunciation. You need not be an expert in Russian, only interested in "trying."

The booklet provides (1) English words and phrases for QSOs, accompanied by (2) the Russian translation and (3) the English transliteration, to assist you in pronouncing the Russian.

The syllabus follows the natural sequence of a QSO. There are additional sections on the Russian alphabet, phonetics, CW characters, numerals, and given women's and men's names. Suggestions are made for addressing mail to the former Soviet Union.

The author undertook this project out of a personal interest in improving the quality of his QSOs with Soviet hams and to enhance USA-USSR relations. A nominal cost of $6 US ($8 US international) for the booklet, and $6 US ($8 US international) for the audio cassette, are payable to the Foundation for Global Community (formerly Beyond War), the original original sponsor of this educational endeavor to build global dialogue and cooperation.

Requests should be sent to:

[Editor's Note: It is my intention to keep the Elmers List as comprehensive and useful as possible, representing a broad spectrum of amateur radio activities. To that end, I have tried to make only very minimal content judgements, if at all. Though this organization seems to serve larger political and propaganda goals that I personally may not agree with, I think the amateur-radio-related content, and the useful product being offered, is redeeming enough to include here. As always, criticisms regarding any Elmer's entry may be directed to the Elmer him/herself.]

"Why don't you just make 10 louder?"
(Spinal Tap)
- ---

Having recently discovered the joys of Perl and CGI on the WWW, I decided to get into the swing of it by coding a WWW page where one can take practice Amateur Radio Exams. The page is now complete and has all five examinations along with figures (including Extra).

The results are displayed question-by-question and then broken down by subelement so that you can see which areas need extra study.

I am also saving the results from each examination taken so that one can get some idea of the relative success rate for each Exam and subelement. This may provide some interesting information as time goes by.

The page can be found at:

http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

I _think_ it should all work as expected but I welcome any reports of bugs and/or suggestions!

I hope this is of use to people interested in upgrading.

PS: If the page is slow, or not to your liking, try Ham Exam at:

http://w5ac.tamu.edu/ham-exam.html

==========
This message does not constitute any official or unofficial statement or policy of American Turnkey or any other organization, corporation or institution.

I just upgraded to Advanced, and am now working on Extra. Was first licensed about ten months ago.

What I've learned:

1. How to operate HF from your apartment without being evicted
2. How to pass tests, both written and code
3. How to make a virtue out of the necessity of your limited equipment, and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when the baby is asleep, so the XYL demands silent running. Besides, with my wimpy wire, there is little point in trying to run voice.

Jim Walsh W7LVN

jwalsh@efn.org

Quarter Century Wireless Association, Inc. (QCWA), headquartered in Eugene, OR, is pleased to announce the QCWA World-Wide Web Home Page, available by either text or graphics browser at:

http://www.efn.org/~qcwa/

Membership in QCWA, a not-for-profit 501(c)(3) corporation, is open to any radio amateur licensed today AND also licensed 25 years or more ago (there is NO REQUIREMENT for continuous licensing over this time period -- if you received your first ham license on or before January 1, 1970, you're now eligible). Included on the Web page are:

* Photos, biographies, addresses and phone numbers of QCWA 1995-1996 Officers and Directors
* Database of local Chapters (nearly 200, worldwide), including name, address, and callsign of Chapter Secretary
* Listing of on-the-air Chapter meetings
* Details of upcoming National Convention -- with photos, as soon as we receive them
* A few words about the quarterly QCWA Journal (we hope soon to have excerpts from Editor Barry Wiseman's new, improved Journal available to you on the Web)
* Rules and schedule for QCWA Phone and CW QSO Parties
* QCWA Memorial Scholarship Program
* Criteria for and recent winners of QCWA Awards
* A Photo Tour of QCWA Headquarters and W2MM/7 memorial station (soon to display a spiffy new IC-738 . . . THANK YOU, ICOM!)
* Links to other interesting ham-related Web sites

Please visit QCWA on the Web . . . and take a moment to E-mail me with your comments, corrections, and suggestions at my E-mail address above. If you administer a ham-related Web site, QCWA would appreciate a Link from your page. We're 12,000-strong -- worldwide -- and growing! Come join us!

I'm not the author of InstantTrack itself, but I was extensively involved in its testing. I'm the author of OrbitDRV (the tracking TSR that comes with InstantTrack) and a number of other InstantTrack auxiliary programs.

AMSAT-NA (the Radio Amateur Satellite Corporation in North America) operates the Internet host AMSAT.ORG to provide for efficient communications between people interested in the amateur satellite program. At this time two services are provided: a message remailing service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive access to a variety of information related to the amateur radio satellite program. Use your Web browser program (e.g., Mosaic) to access the URL:

http://www.amsat.org/

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server. In addition, various files and programs are available for anonymous FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes. The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS - AMSAT News Service

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your

local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB - AMSAT bulletin board

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS - Keplerian Elements mailing list

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO - NASA related information mailing list

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX - Shuttle Amateur Radio Experiment mailing list

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be

processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive
2. Your callsign, if any
3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing list maintenance. You may address membership requests to martha@amsat.org, or send them by mail, phone, or fax to AMSAT headquarters:

Conway Yee N2JWQ

yee@mipg.upenn.edu
2144 East 21 Street
Brooklyn, New York 11229

Maintainer of the Universal and Free Listing of Repeaters for Radio Amateurs

This listing with all the data is available for anonymous FTP from:

ftp://mipgsun.mipg.upenn.edu/pub/yee/rptr010.Z

An experimental search and submission front-end is available at:

http://www.acs.ncsu.edu/scripts/HamRadio/repeaterdb.perl

As far as I am aware, all the data is freely redistributable and my
intent is to make sure it stays that way. For this reason, I have
applied the GNU General Public License.

The repeater project will now include repeaters from ALL bands and is
not limited to the US. This reflects the intent to make this directory
universal.

Contributions of data may be made by anonymous ftp to:

ftp://mipgsun.mipg.upenn.edu/pub/yee/uploads/

or via E-mail to yee@mipg.upenn.edu

The data format has not been changed from the old format so
contributions that you were planning to make (prior to my recent
troubles) are still current and most welcome. This repeater listing
will be of use if people take an active part in making it accurate and
useful.

My primary interests are in packet radio network building
(particularly higher speed stuff) and TCP/IP. I've got quite a lot of
info on using the Kantronics D4-10 19.2kB radios, as that's the
hardware we've been struggling with here.

+ I'm now working heavily with Linux, and help run a TNOS/Linux BBS, and
+ a Linux native-AX.25 switch. Although I'm not "the world's greatest
+ authority" on either, I'd be happy to help folks with questions to the
+ extent I can.
+
```

+ I've developed some experience with full-duplex packet repeaters. I've
+ built 2 19.2 repeaters, and am working on a 9600 baud one now.
+
TAPR (Tucson Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a
result, the TAPR net-sig mailing list was born, and is now ready for

+ Chuck Rippel WA4HHG
+
+ crippel@exis.net
+
+ Secretary, Collins Collectors Association
+
+ The Collins Collectors Association would like to invite those of you
+ who have an interest in Collins Radio to subscribe to the now fully
+ automated Collins Reflector. This service is sponsored by the CCA and
+ is provided at no charge to Collins enthusiasts.
+
+ There is an FAQ which will hopefully be sent to each new subscriber
+ when they "sign on." If you would like one and don't get it, drop me
+ an E-mail at my address above.
+
+ There may be a few initial bumps and glitches at first but we hope
+ those of you who choose to participate will enjoy it.
+
+ As of 1/6/97, the Collins Reflector will be fully automated and I will
+ discontinue forwarding the mail manually as in the past.
+
+ The new automated list processor will be a real upgrade. It will
+ enable you to get the material in nearly real time and does not
+ require me to forward each message manually. You will get the material
+ much quicker than before. The Collins Listserver behaves much like the
+ Boatanchors list. Simply, you subscribe to the list, send it messages
+ which it then "reflects" back out to all those who subscribe. This is
+ done once every ten minutes.
+
+ You must resubscribe to the new listserver in order to continue to
```

+ participate. The automated list server follows the same guidelines
+ contained in the CCA FAQ. Please continue to follow those guidelines
+ for posting and contributing.
+
+ Here is how to subscribe:
+
+ Send an E-mail message to:
+
+ listserv@listserv.tempe.gov
+
+ Leave the Subject header of the message blank and in the body, simply
+ type:
+
+
+ subscribe collins
+
+ The listprocessor will output an E-mail message back to you with easy
+ to follow instructions asking for your confirmation. At that time, you
+ will be asked to send a second E-mail message to the listserver.
+ Follow those instructions exactly and send the second, confirmation,
+ message to the listserver.
+
+ If all is successful, you will be signed up to the list and a complete
+ set of instructions will be sent back to you in the form of an E-mail
+ by the automated list server.
+
+ Finally, a very big thanks to Dave Kelly, AI7R and the City of Tempe,
+ AZ who have graciously provided and set up the server. Dave and the
+ Collins Collectors Association sponsor the Collins Reflector as a no
+ charge benefit for Collins afficionados everywhere. Enjoy!
+ ____

2670. New Ham Radio.FAQ on WWW or TEXT or Disk

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-03 00:00:00 UTC
From: john@wd1v.mv.com
Message-ID: <john-0302970429220001@wd1v.mv.com>
Source record: 205563

Announcing NEW
Ham Radio.FAQ

This is the second generation of the original file that was
a regular USENET posting entitled

"rec.radio.amateur.misc Frequently Asked Questions"

The NEW Ham Radio.FAQ is a HyperText document that is on the
WWW and it contains 3 chapters plus hundreds of LINKS to radio
related sites!

1 - Introduction to the Ham Radio.FAQ
2 - Amateur Radio Organizations, Services, and Data Sources
3 - Amateur Radio Advanced and Technical Questions

Please provide a copy of the Ham Radio.FAQ to any new or
soon-to-be Hams that you know or share with them the URL to this
site:

http://www.mv.com/ipusers/wd1v

Send me an EMAIL <or packet with your Email address> if you want the
FAQ text file sent to you as an attached <120 K> file with the words
"HAM FAQ" on the subject line.

Send me a formatted disk with SASE disk mailer if you want the
FAQ text file sent to you on disk. PC or Mac are fine.

Hello:

I have the following items that I no longer need and are gathering
dust around the house:

1) Borland Turbo C++ For DOS v 3.0: This is a complete install on BOTH
3.5" and 5.25" HD disks
and comes with the full documentation (a VERY big book!).
While this will NOT compile
NOS without some major changes to the source code, it can
compile many other programs
and be used by someone who wants to learn C or C++
programming. Has a very nice DOS
developer's environment.

Sells new for $90.00

Your price: $45.00 obo

2) Borland C++ For Windows, DOS, and Win32 v 4.50: This is a complete
install on CD-ROM. All
documentation is on the CD-ROM. This WILL compile all NOS
variants!! Comes with full
debugging and optimizing functions. Also supports ANSI C. May
be only partially
installed to the hard drive to save space if needed. This is a
VERY nice package and
is intended for professional programmers.

Sells new for $300.00

Your price: $65.00 obo

3) Borland C++ For Windows, DOS, and Win32 v 4.51: This is a complete
install on 28 (!) 3.5"
HD disks. Fixes a very minor bug in v 4.50 (I never saw it
come up!). Must be FULLY
installed to the hard drive (needs almost 100 megs). Is
otherwise identical to #2
above.

Sells new for $300.00

Your Price: $65.00 obo

4) Info Magic Linux CD Set: This a VERY complete Linux package and
includes full installs for:

Red Hat 3.0.3, Slackware 3.1, Debian 1.1.4 and more. Has
XFree86, full HOWTO set, and
much, much more. This is a >6< CD-ROM set! Not that the CD
case itself is damaged, but
the CDs themselves are just fine. There are many Ham packages
(mostly packet) that run
under Linux with many more being added all the time.

Sells new for $50.00

Your Price: $35.00 obo

```
*****************************************
* SPECIAL ONE FOR ALL DEAL: *
*---------------------------------------*
* Take all 4 items for only $175.00 USD!!! *
*****************************************
```

```
**********************************
* TRADERS TAKE NOTE *
**********************************
```

Those Hams wishing to trade, I am looking for the following Ham gear
(must be in good working order and complete.):

1) Any 6m FM or SSB xcvr. Tube or solid state OK.
2) Any 2m FM or SSB xcvr. Tube or solid state OK.
3) Just about any packet gear... TNCs, radios, what-ever. I am
especially looking for an SCC
type card.
4) Any 2m hand held with good battery.
5) Let me know what you have! Please note that I have no interest in
HF gear.

```
**********************
* SPECIAL NOTES *
**********************
```

1) Due to export restrictions, the above may be sold only to US
citizens and shipped only to US
addresses.
2) All prices include shipping by my choice of carriers.
3) I prefer to sell as a package and package offers will take
precidence.
4) I prefer to trade the items and trade offers will take precidece.

If interested in any of the above items, please contact me via packet
or E-Mail at the addresses below. Please include your name, packet
and/or E-Mail adresses, phone number(s) and hours I can contact you.

Thanks!

Take Care & 73

2672. Cleartone CM6500 PMR MODS?..

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-03 00:00:00 UTC
From: Max Lock <g7uoz@uhars.herts.ac.uk>
Message-ID: <Pine.LNX.3.91.970203102057.18324A-100000@uhars.herts.ac.uk>
Source record: 205565
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.misc,uk.radio.amateur

Hi All,

Bought a Cleartone CM6500 PMR set yesterday, very cheaply too, just wondering if it's possible to mod the radio into the 70cm's band, and also where I can find any information to do this. Unfortunately, there is nothing obvious inside like a diode matrix or Eprom, so any help would be gratefully accepted.

Thanks in advance and 73's de G7UOZ, Max.

2673. Search MD2 algoritme description.

Newsgroup: rec.radio.amateur.misc

2674. The Homosexual Agenda

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-03 00:00:00 UTC
From: "William A. Wetzel" <n6rky@pacbell.net>
Message-ID: <32F5B4B7.30DC@pacbell.net>
Source record: 205567

Here We Go Again!

Why is it that someone's sexual preference has to be the leading topic in an activity or an association?! I will not hide the fact that I am not at pleased with LAMDA's association with the ARRL. Nor am I pleased with all the "BIGGOTS" either. Amateur Radio is supposed to be a technical hobby!, not a platform for someone's morally corrupt agenda nor biggotry as well. God does not approve of homesexuality, BUT do not forget Romans 2:1 also. Yes BIGGOTS!, read this verse VERY CAREFULLY! Perhaps you might find that your HOMOPHOBIA might be indicative of what you don't like about yourself and have to take out on others. Hhmmm...

: I have seen some really smart people have their whole life shattered
: because they could not read Morse code, its a fact that some people cant
: read the Morse.

And there are some people who can't understand electronics even though they
can still use a manual for an HF radio.

: Anyway enough of that. We keep on hearing about all these threats to the
: amateur bands around the world because we dont use HF or VHF or UHF. I
: wonder how many hams have gave the hobby up because they could not read cw?
: How many other people havnt even bothered to take the exam because they
: know no matter how good their technical ability is they may not have what
: it takes to read mores code..

Is HF under threat?

: Just remember that Morse code is only one many modes used by todays
: ham....SSTV...Packet...RTTY..
: FAX...SSB...PACTOR....and what everelse people come up with.

But SSB/CW account for almost all of HF usage. The combined users
of all the other modes is a small minority. HF packet usage is
actually declining.

Regarding the comment that Bible believers are "backwoods, uneducated types." Some of us have earned doctorates and find it no preclusion in taking the Bible seriously, my friend. I enjoy an extra class license and have degrees in both psychology and philosophy. I think it is no shame for an educated, intelligent, or scientific person to consider the Bible's claims seriously. In fact, a person is not fully educated until he/she has studied this document which has played such a pivotal role in humankind's history, culture and thought. I credit Scripture for transforming me from an intolerant bigot to a man who can now embrace with love and tolerance sinners such as homosexuals, myself, and those who show no small amount of haughty disdain for "backwoods, uneducated types." You rightly criticize the intolerant, but don't fall into the category yourself by labeling us fundamentalists as "backwoods, uneducated types." It isn't reasonable to identify everyone in a group by their worst element. I'll bet you are more tolerant and less self-righteous than your comments suggest of such a person. Your apparent passion for tolerance belies your mean spirited words.

2678. Re: A Proposal: No-code HF General

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-03 00:00:00 UTC
From: ghicken@mail.idt.net
Message-ID: <5d4pgf$341@nnrp4.farm.idt.net>
Source record: 205571

After all the differences expressed for the things I've said on this thread, I want to wave the white flag. But here is what I'm in amateur radio for:

1.) The hobby. I can't afford to have the best but I can design and build gear and have fun.

2.) Discipline. The challenge of learning and accomplishing the effort to earn my ticket.

3.) To meet people who have things in common with me.

4.) I want to keep the term 'Amateur' in Amateur Radio. I'm not interested in CB, GMRS, or Family Radio Service.

So I will pursue these things. I'm sorry that my opinions created such an emotional response.

73, Gary, N3JLC

2679. Ham Homo's vs. the Bible...

Newsgroup: rec.radio.amateur.misc

Message-ID: <19970203133800.IAA27221@ladder01.news.aol.com>
Source record: 205572

hey, guys! You don't need the Bible to go up against homosexuality!
Most of them don't believe in it anyway, so the versus are pointless.
(Or they twist the meaning to fit their agenda.....)

All I've ever used is medical facts. Besides AIDS, homo's have an
statistically increased rate of:

RECTAL CANCER
BOWEL CANCERS
A LOSS OF BOWEL MOVEMENT CONTROL
HEMORRHOIDS
SHIGELLA (and other intestinal bacterial infections....)

Have a hate-free day.....bigot haters......

2680. Re: Bible is the word of man

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-03 00:00:00 UTC
From: brucemc@ix.netcom.com
Message-ID: <5d4prm$mnb@dfw-ixnews6.ix.netcom.com>
Source record: 205573

Regarding the thread, "The Bible is the word of man."

Of that you seem so sure. From whence comes your surety? How do you know this with such absolute verity that you can speak with this boldness? Do you cite some authority? Will you reveal your reasoning so we may all consider your claim? Is there some truth you have discovered that we need to know about?

Or perhaps its just an uninformed, uneducated opinion by someone who has never really taken the Bible or its claims seriously? Worse, perhaps you are not all that familiar with Scripture at all. Perhaps you know more about rf chokes than the teachings of the Word; teachings such as having humility in your opinions?

It may very well be that the Bible is a revelation from God through the medium of man's intelligence, culture, experience and personality. Imagine the possibility that even through the limitations of human language, a symbolic expression at best, we are able to see with full adequacy, not perfectly, not clearly, but adequately, a reality we cannot fathom.

By starting out with such an unscientific and subjectively biased premise that something cannot be possible, you deny yourself two things. 1) the possibility of new truth, 2) objectivity in scientific methodology. Would you learn anything if you started a search for stray rf in the shack with a premise that electromagnetic waves don't exist?

Regarding William's statement that God is not happy with homosexuals or the bigots who hate them...

Right on, William! We might add to the list those who harshly categorize bigots.

2683. WTB: ***2M Rig for < $100***

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-03 00:00:00 UTC
From: Paul Knight <pknight@elec.ctl.etn.com>
Message-ID: <32F61999.3BE8@elec.ctl.etn.com>
Source record: 205576
Cross-posted to: rec.radio.swap,rec.radio.amateur.misc,chi.wanted

Hi! I'm looking for a functional, yet inexpensive
2M rig for monitoring purposes. An HT is fine,
as is a small mobile/portable rig. A mic/CTCSS would
be a plus, but not necessary. Weak batteries are
also ok (for HT's), as long as an AC or DC adapter
is included.

Some models which come to mind:

Kenwood TR2400/2500/2600 series HT's
Kenwood TR7730 and like mobile rigs
Icom IC2 series HT's
Heath HW2036

etc.

Please drop me a note with what you have,
and your price.

I have a yaesu 50 dual band HT for sale.
With 2 five watt batteries, bnc adapter, drop in charger, and rubber weather protector.
I bought everything new 4 months ago.
It is like the day I bought it, and has been just sitting.
I bought it for my wife, but she says she doesnt like to carry an HT.
The price is $250 firm.
If interested please send an email to tattoo@ptd.net, or call me at 717-752-5153.

Now if you could just take the same attitude torward your keyboard...

BTW Burt, what do you do for Ham radio besides bitch about it?

I know you are interested in weather, are you part of SkyWarn?
Do you have an APRS weather station on the air for NWS to monitor?
Just a couple useful applications of 2 meters. I'm surprised living on
Cape Cod you choose to do your fishing on the internet. And you say
Hams don't have a life? Doesn't say much about yours.

This is terrible, and so are a few other HF frequencies, but total, I
would say less than 1 or 2 % of the band is unusable because of these
bozo's.

Contrast that with the code free CB band, where it is 100% unusable
when the band is up, not to mention the sliders out of band with no
concern for legality.

So a few leaked through, and I think if you do a little research on these guys, they were good operators at one time, maybe we should find out why they are doing this. They do however stay on one frequency which is easy to avoid.

It might sound better in LSB than USB, since most 75m work is LSB.

The response rate after one month (about 60 out of 280 or so) was a bit disappointing. If anyone has any information on Elmers whose mail has bounced (or who haven't responded), please write me at elmers-request@novia.net (the default Reply-To: of this message).

To the non-respondents, I sent the following:

>Greetings fellow Internet Elmer,
>
>Last month, I sent out an E-mail message to all Elmers on my list
>requesting them to confirm the information in their entries and ensure
>they are up to date. Many of them responded. You were one of the
>Elmers I didn't hear from.
>
>I realize that this message may have gotten misrouted, or you have been
>busy or forgotten. I also realize that the Elmers List should consist
>of voluntary participants with time to spare for Elmering (the one
>exception to this is those who maintain some sort of high-profile,
>publicly-accessible WWW page or archive site, but even those individuals
>should at least be able to reply to me). If you no longer wish to be
>advertised as a net Elmer for any reason, let me know and I will respect
>your wishes.
>
>You should have already received instructions about how to obtain a
>current copy of the Directory and Indexes in my previous mailing (send
>E-mail to elmers-request@novia.net if you didn't). Please take the time
>now to review your entry, confirm that it is correct, and make updates
>if necessary. Please also confirm the Index to make sure I've listed
>you under the right topics. As I noted in my previous message, I really
>need to confirm the accuracy of individual entries, but once confirmed,
>I won't be bothering the Elmers again for at least another 2 years.
>
>If I don't hear from you by March 1st, I will assume that your entry is
>obsolete and will delete it. I will, of course, be more than happy to
>reinstate it at any time upon receipt of updated information.
>
>I'd like to thank you for your previous contributions to the net through
>your volunteerism and enthusiasm and hope to continue having you as a
>Internet Elmer.

I'd like to thank those that did respond right away for their replies and continued assistance in keeping the list accurate and up-to-date (as well as a lot of positive and informative feedback about use of the list by the readership). As a result, the list will remain a usable net resource for some time to come.

Apologies to disinterested parties for this closed-circuit. This will be my last post on the subject for at least another 2 years.

I'm with Drew and Burt. If God can love the low life, self rightous, code lovin, ham radio operator, he certainly can include a select group of people who's only fault is that they are human enough to love each other. ham radio is supposed to be a hobby where human interaction is the key. Now we are concerned with the sexual preferences of a minority of members who pose no threat to the hobby.

Hello all. My father asked me to post this request. I put this
same info on rec.audio.misc and thought I would try here as well.
Amateur OPs usually have good advice. So here goes:
My father has a Collaro Hi Fidelity Unit (Mfg o/a 1954-55) and is
looking for a Plug-in Head (78-45/33.33; Mfg originally at Ripple Works,
Essex, England) and the following tubes 12AU7, 6C4, 12AX7, 6V6GT, 6VGT
and 5Y3GT. This unit was purchased new from Dictograph Products Inc.,
Jamaica, NY. Model # 100, SN 689384026. If anyone has any info please
email to soprano@hiwaay.net. Thanks and 73, Martin/NM4S.

>would appeal to a larger number of listeners.

Hmmmm. I wonder.

Len, if you are out there, or in here, whatever...you may want to conduct your own research into the FCC database and see for yourself that just around 80% of hams in that database have taken and passed at least Element 1A...at least as of September 1996. It looks like the majority of no-coders are getting on the ball and taking their code exams too,

[It does not matter whether any ham in the database is active or inactive, a silent-key, etc.]

I challenge anyone to refute this information.

I have seen the database as it was broken down by class of license, age, and geography. Interesting. If I had done the work myself I would have published it here...I was allowed to see it but not have it. Go figure. :)

Sohl is quite correct. In order to qualify for an amateur licence, one needs to be the hold of the Amateur Radio Operator's Certificate with Basic Qualification. However, once the licence has been procured, all one needs to do in order to gain HF access is merely be successful in the 5 or 12 wpm Morse code qualification examinations. No further written test is required.

No doubt that HF access is desirable, but it may be a stretch to say that many of those who do gain access to those frequencies are doing so solely for CW communications.

Or am skilled enough in the use of automation techniques (Perl scripts, Unix cron jobs) to propagate information. The two main projects I pursue on this newsgroup, the Elmers list, and the Auto-FAQ project, are actually attempts to *reduce* the amount of time that I (and others) spend helping out by devoting that time to more efficient methods of presenting the most commonly-requested information about amateur radio (others with much more time on their hands than me choose to help individually, and I respect that, but would be clearly way over my head).

>Since you -do- have so much free time, why not analyze each and every
>message you have counted - and categorize them? Make up categories like:

>a. direct response to an inquiry
>b. confrontational, non-informational reply

>...you get the picture.

>THEN your data collection has some merit. Simply counting addresses
>proves absolutely nothing.

>Confrontationally yours,

>>> 60 clint.bradford@atdbbs.com

When I posted the top-40 addresses, I was initially concerned that I was making the implied statement that all of the top-40 were negative participants, but assumed that most intelligent people would realize what I meant. Obviously, individuals like Gary Coffman and yourself are more positive participants, and should have realized that I was aiming my criticism more towards individuals like Burt Fisher.

The larger point that I was making is that something like the 95/5 principle applies in any public forum (i.e., most articles are from a small number of posters; conversely, most posters post a small number of articles), and that sweeping generalizations about "the opinion of amateur radio," if there really is such a thing, cannot be gleaned by reading rec.radio.amateur.misc.

Convolutionally yours,

Paul, K3FU

This is an honest question, so here's an honest answer.

I've heard a variety of explanations, none of which agree very well.
Two I remember are: lambda is the first letter of the Greek spelling
for "Lesbos" (a reference to Sappho of Lesbos, a lesbian character in
classic Greek literature I think); and at least some of the Spartans
(of whom whose warrior class a number were gay) used at as a symbol on
their battle shields.

You may well have a point Walt, but it must also be borne in mind that
most organisations, clubs, publications, et al, have/are also
experenced/ing such problems. A well-hackneyed phrase I admit, but it
appears to be symptomatic of the times?

Mike

: 30 years ago.

The original post from "Buster C." really made a lot of sense, in terms of finding many ways to enjoy the world above 50 MHz. I've been a ham for more than 30 years, almost exclusively on HF, and I have always been fascinated by VHF and above.

As far as equipment being expensive, well, name a popular hobby that isn't expensive! It's just a matter of finding inexpensive ways to do things, as hams have been doing for years. Granted, fewer hams today are homebrewing, but it isn't necessary to go that route to get on HF. The QRP crowd is still big on homebrewing, and there are still inexpensive kits available, even though the King (Heathkit) is, sadly, no more. And let's not forget the number of fine radios that fall into the boatanchor category, but still perform well.

Someone recently gathered some of my comments together and posted them
on here.
It was a good shot and worthy of a post.

Your comments on the "BOZOPAPERS", really was quite dull.
Further it shows it is indeed YOU who is the angry little man.
I have heard from some of the people YOU have made enemies of
and you are not respected.
You had said something "you do not know who I am."
Inferring you were someone important. There is no one in the ham
community
I consider important

Clearly I have gotten to you.
If I am a nobody you would not respond.

Post all you want, no one takes you seriously.

No ham draws a line in the sand.

A man went to a guts store to get some guts for dinner. He sees a sign
remarking on the quality of guts offered at this particular gut
store. So he asks the butcher: "How much for Engineer guts?"
"3 dollars an ounce."
"How much for teacher guts?"
"4 dollars an ounce."
"How much for ham operator guts?"
"100 dollars an ounce."
"Why is ham operator guts so much more?"
"Do you know how many hams you need to kill to get one ounce of guts?

This thread really ought to die, but I gotta say
1) Bigotry will kill more people than AIDS.
2) If God says it's wrong, then God will punish them.
3) Christ made a point of associating with the outcasts
(tax collectors, prostitutes etc...) in His own society.
If you want to hate people, you'd better come up with
another role model. It's OK to hate the sin, but you
gotta love the sinner.

47 CFR 97.19(b) Application for a vanity call sign.

Each application for a modification of an operator/primary or
club station license, or the renewal thereof, to show a call sign
selected by the vanity call sign system must be made on FCC Form
610-V. The form must be submitted with the proper fee to the address
specified in the Wireless Telecommunications Bureau Fee Filing Guide.

I assume you can find the current Fee Filing Guide at
http://www.fcc.gov .

> >acronym?

I always thought it was because the curvy-ness of the letter made it a
pretty good logo, sort of like the IXIOUS fish was for early Christians.

BTW, NAMBLA is one of the oldest functioning gay liberation
organizations. Our members are not "human waste". We oppose
age-of-consent laws because they are redundant (rape is already a crime)
and infringe upon the rights of youth. EVERYONE should have the right to
say who may touch their body and who may not. This is isn't the ng in
which to extol the virtues of pederasty, but there's a raging discussion
on this currently in alt.politics.homosexuality. -=- Tebster
-=-=-=-=-=-=-=-=-=-=-=- NAMBLA: WHERE WE STAND

The North American Man/Boy Love Association is both political and
educational. We work to organize support for boys and men who have or
desire consensual sexual and emotional relationships and to educate
society on their positive nature. We speak out against the oppression
endured by men and boys who love one another and support the right of all
people to consensual intergenerational relationships. Throughout most of
Western history (and not only Western), man/boy love has been the primary
form of homoeroticism, and it is this love for which NAMBLA stands.

NAMBLA was founded in 1978, within Boston's gay and lesbian community,
in response to a witch hunt against man/boy lovers in that city. Since
then, NAMBLA has worked to build a community of support through our
publications and conferences. Our spokespeople raise awareness of the
issue in the media and academia, before community groups, and among the
general public.

While NAMBLA's members represent a diversity of backgrounds and
polotics, we all share a liberatarian, humanistic attaitude on sexuality.
We believe that sex is good and wholesome and that it is an important
medium of personal expression.

NAMBLA condemns sexual abuse in all forms of coercion. We insist there is a distinction between coercive and consensual sex. Laws that focus only on the age of the participants fail to capture that distinction, for they ignore the quality of the relationship. Differences in age do not preclude mutual, loving interaction between persons any more than differences in race or class.

Some existing laws criminalize sexual relationships that are loving and fully consensual. These laws are ill-conceived and morally repugnant. As is our right, we advocate their repeal. Nothing that we speak or write about is intended to advocate or counsel the violation of such laws.

NAMBLA calls for the empowerment of youth in all areas, not just the sexual. We are against arbitrary constraints on the rights and freedom of all, young and old. We support greater economic, political, and social oppertunities for young people and denounce the rampant ageism that segregates and isolates them in fear and mistrust.

2730. Fee required to renew vanity calls?!

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-04 00:00:00 UTC
From: dvhunt@es.com
Message-ID: <5d7v74$7ct@esnews.corp.es.com>
Source record: 205374
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

I have heard many rumors that you must pay a renewall fee for a vanity call. Is this true? I've looked everywhere I can think of, but I can't find anything that corroborates that. I did see some _EARLY_ FCC press releases that said they were going to charge a fee, but they also said that the application fee would be $70, or $7 per year for 10 years.

NOWHERE on any of the forms did I see that a renewall fee would be required. I didn't even find out it was a possibility until long AFTER I had applied. So what's the deal? Is the FCC trying to pull a fast one on us, or is it just an unfounded rumor, based very preliminary decisions that didn't end up panning out?

(If you DO find documentation for the fee, please direct me to it. WEB site or whatever. Thanks.)

73 de N7LN (Darvell)

(BTW, I WILL pay the $30 to keep my vanity, but I don't think it's right to require it when I had no advance notice.)

Not true, Drew. The great majority of people with AIDS are heterosexual.

They also live in Africa, so I'm sure you don't count them as completely
human.

Following up last summer's "Independence Day", there was another sterling example of the usefulness of Morse Code on last Sunday's "Simpsons". Burns and Homer were trapped in an old mountain cabin after an avalanche. In the corner is a old wire telegraph. Burns (must be a ham!) grabs the good ol' straight key and starts rapping out a SOS. Miraculously the wires are still up, and the sounder in the Springfield Museum clacks to life! Unfortunately, the stuffed figure of Sam Morse next to the sounder took no action.

WELL HERE GOES!!! I'm sure I'll get harassed like crazy for this...
Well, I got the mod to work.... FROM 50-999mhz.... NOW heres the
problem.... I CANT TRASMIT anywhere.....The ptt light doesnt even
light up... When I hit my 'knob' button to make settings and you're
supposed to hit PTT to confirm & save it... I have to hold the KNOB
down to save it.... I'm sick.......I should've left well enough alone!
CAN ANYONE HELP ME?????? PLEASE??????? I've learned my lesson!!!

If I can just get it to transmit where its supposed to I'll he a
happy ham!!

THANK YOU!!

MARK WATSON

Paul,
you are in the right group, these guys are not. I don't care for the
sexual preference discussion either. This is a ham radio related group
and I would like it to remain that way.

I do note 1 item of interest, however. The newsgroups seem to have a
similarity to what has been ocurring on the hf ham bands over the last
few years. More nitwits and less intelligence.....

Eric.

LARC appears to offer a level of tolerance which other amateur groups
do not.

>You can avoid the issue all you want. If a person feels bad because a

>community then they have a choice. They can either live with it and
>accept it, or change their behavior. It's that simple. It is not our
>*responsibility* to accept this type of *behavior*.

You appear to think it is your *responsibility* to *condemn* gay people.
As long as there are people like you around, there will be a very
good reason for clubs like LARC.

Imagine if there were people that felt is was their responsibility
to condemn radio amateurs. After all, amateurs generate RFI, TVI
and all that RF is almost certainly a health hazard. Clearly,
amateur radio is deviant behavior. If you feel bad because your
neighbors won't let you erect an antenna or operate a transmitter,
you can either accept it or change your behavior.

Can you see the connection?

I can - that is why this monogamous heterosexual believes it is
important to respect the rights of others to make personal choices,
even choices contrary to my own.

Dear All,

The demo for MUFsight has been updated to correct a minor bug.

MUFsight is a propagation prediction package for MS-Windows which
uses MINIMUF to plot propagation data on map projections as colour
shading.

Further details are available at:

http://www.sapphire.win-uk.net/prod05.htm

It's a protest thing Don. Carl is protesting the fact they he's smarter
than the average bear. He, by his own admission, can copy 20 wpm in the
vacuum
between his ears. He has forgotten more on RF and Sanitation engineering
by taking a dump than most people know in 5 lifetimes (again his own
words) Carl works for a 2 billion dollar company making portable phones
and baby monitors. From what anyone can tell, he was hired under the
Hire A Pithetic Fool program. He's lived on a sailboat, where he built
in all his store ham gear. He has worked HF in Mexicao and now feels the
need to be DX'er and a ragchewer like most normal people. He also has an
extensive list of test equipment. His own words "more than most
engineers would normally have access to" Hmmmm, wonder where he put it
all on his yacht??

Take pity on him, he has physical problems. Seems he had a backbone
transplant and when they went to install said backbone, all of his
personality leaked out. read(s**t for brains)

Drew:

You are having a very difficult time with this. Again, you have no idea what is going on on 3894.5. At least half of the calls listed on this list *never* appear on this frequency.

Where did you get this information? Your tendency to libel other amateurs will come back to haunt you, especially if you ever get HF privileges. What you are doing is absolutely a disgrace to the hobby, and you are showing a contempt for it that must have rooted in your 20+ years of CB operation. I can tell you that you are doing nobody any service and appear to be doing this simply to feel important.

****

I ADMONISH EVERY AMATEUR TO DISREGARD ANYTHING THIS KID POSTS, AND EITHER LISTEN FOR YOURSELF TO UNDERSTAND WHAT IS GOING ON, CHECK INTO THE FREQUENCY (THE GROUP THERE WILL HELP YOU OUT..."DREW" CAN'T DO IT BECAUSE HE IS ONLY A TECH PLUS), OR ASK SOMEBODY WHO HAS BEEN AROUND HAM RADIO FOR MORE THAN A YEAR. IF YOU SUPPORT THIS KID, YOU ARE ENCOURAGING THIS KIND OF BEHAVIOR, WHERE BASELESS ACCUSATIONS ARE MADE AGAINST INNOCENT HAMS, SOME OF WHOM HAVE NEVER EVEN *HEARD* OF 3894.5, MUCH LESS EVER HANG OUT THERE!

****

Of course, any ham who is interested is probably well aware of who the players are and the jamming problem that occurs almost nightly.

Dave

Drew:

My rebuttals are not "worthless" as you say. In fact, they are a service to the amateur community who frowns on people getting on the USENET, the radio, or other medium and lying about other hams, or spreading rumors that he "heard from others". Regardless of what is going on where, your behavior is indefensible.

Hams may not like what goes on there or elsewhere, but there is no place in the hobby for this kind of thing. I have offered to help you understand what is going on and will happily do that. I saw a posting from another ham who also offered to help. But you would rather libel your fellow amateurs and be a part of the problem than a part of the solution.

That is your choice, but nobody is going to respect you for it, if that's what your trying to achieve.

Dave

BTW, I am also not a "grammar freak", as you put it, If I were, I would have noted the other major grammatical error in your last post. If you wish, I will put that on my list of things to get on you about besides your illegal and damaging behavior.

Initially there was talk of a one-time fee for vanity calls. The ARRL pushed hard for this. Unfortunately, the FCC didn't go for this and after ten years, unless they (hopefully) make a change, there WILL be a renewal fee. I suspect that's why you see the Vanity Call designation on the databases. It would indicate the need for a renewal fee,

I can. I have copies of all of your past postings where you name people by name and callsign, publicly, as being associated with illegal activity. These accusations can be proven to be false. The fact that, in some cases, you qualify your statements by saying "I heard somebody say..." does not absolve you of any guilt. Ask a lawyer if you don't believe this.

Some of your postings have been forwarded to hams to whom this is of great interest.

If you feel victimized, join the club that you have created. In this case, the accusations against you are true, clear to many people, and can be proven. How would you like to be one of the *innocent* hams that you have libeled on the net?

Perhaps you could explain to a non-member like me what the benefits of
membership are?

Is part of the problem (talking generally about clubs and societies
here) that in the past a key benefit was the sharing of news and
information through newsletters, whereas now newsgroups and
listservers spread perform the same role more quickly and (IMO) more
efficiently?

myers@West.Sun.COM (Dana Myers) wrote:

>LARC appears to offer a level of tolerance which other amateur groups
>do not.

That is NOT the issue. Are we not getting our point accross here? Ok, here goes one more time. If they were had nothing to do with gays/lesbians, what would this amateur radio group offer that others do not? Nothing. So, noting that point, what other reason would they have for proclaiming themselves a gay/lesbian club? Sympathy, understanding and tollerance are just masks for the real reasons. Do you see my point? There is no place for this type of crap in Amateur Radio, none.

If they want to gather among other gays and lesbians they can go to a bar or what ever, but I find it utterly detestable that they use Amateur Radio as another method of soliciting partners. And that is the ONLY other reason they could possibly have whether they admit to it or not. Sex plays no part in the operation of an Amateur Radio Station, there are no sex related questions in the pool for any class of license, and there are no how to's for sex in the Amateur Radio Handbook.

>You appear to think it is your *responsibility* to *condemn* gay people.
>As long as there are people like you around, there will be a very
>good reason for clubs like LARC.

Yes sir, it is OUR responsibility, not just mine. Gay people condemn themselves, they need no help from us, but they do not need any encouragement, and by looking the otherway you do just that. As I stated before, that is not a viable answer to the question we have all been asking. And there will never be a reason for groups like Lambda, to exisit in Amateur Radio. There is simply no viable link between AR and sexuality of any type that warrants this type of a group.

>Imagine if there were people that felt is was their responsibility
>to condemn radio amateurs. After all, amateurs generate RFI, TVI
>and all that RF is almost certainly a health hazard. Clearly,
>amateur radio is deviant behavior. If you feel bad because your
>neighbors won't let you erect an antenna or operate a transmitter,
>you can either accept it or change your behavior.

They don't? Hehehe Check the batteries in your reality detector, I think you may have a low cell. You are comparing apples to oranges here. Talking into a microphone or pounding on a key does not transmit anything but a signal and information, unlike deviant and un-natural

sexual activities.

>Can you see the connection?

No, apples do not grow on orange trees sir.

>I can - that is why this monogamous heterosexual believes it is
>important to respect the rights of others to make personal choices,
>even choices contrary to my own.

True, but respect does not imply silence, acceptance and cooperation. Especialy in this case, where sex of any kind, has absolutely nothing to do with Amateur Radio. (And don't give me that YL club crap either, YL implies gender, homosexuality implies sexuality, deeds, practices and choices) And absolutely, they are indeed intitled to their Constitutional Rights, but absolutely no special rights above and beyond that.

Spoken like a true genius. I'm sure your degree came for the back of a Special K cereal box. Get real.
Africans and similar cutures are not added to NORTH AMERICAN / EUROPEAN staistics not because of their color, and not because of their nationality. The epidemics in these countries are vast, and are usualy not controlled and reportable because the countries they live in do not have the resources for HIV/AIDS surveillance, education, intervention and treatment. And a large number of Africans live in remote areas not serviced by modern conveniences we all take for granted, such as clean water, electricity, REAL FOOD and other communications means. These areas are considered hotspots and are monitored on a different basis, using other means. Medical records are also readily available to HIV surveillance personel in the US and Europe, but in Africa and other similar areas, if you don't have doctors, then where do you get the records to include in your statistics? And if you add fake numbers or guesses to a world figure (number) you are headed for disaster.

Rob Neff (N7ORY)

Know what the hell you are talking about before you imply things like that.

Contact an Epidemiologist at the WHO, of in your local area for that matter. You might learn something.

Nice theory, but Adobe sells that program so that when the employees of a
company pirate Photo Shop, Adobe can come in and shake them down for money
by threatening to sue them if they don't 'come clean'. So to offer a
low pain solution, Adobe offers Photo Deluxe.

David

2768. Feedline wavelength question.

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-04 00:00:00 UTC
From: murphy@mail.msen.com
Message-ID: <5d865f$lkm@ftl.msen.com>
Source record: 205449

I was hoping someone could answer a question. I have a 1.2 GHz
FM repeater and have noticed that when changing the interconnect
cables (e.g. the "repeater TX out" to the "amp in" or the "amp
out" to the duplexer) the length of cable I use can increase
(or decrease) my output power by 6 watts! Just by snipping off
an inch. I assume what I need to do for maximum output is to make
the interconnect cables a multiple of the wave length (1/2 wave,
1/4 wave?) Why is this? So if I wanted a cable for 1282.400 (my
tx freq.) about 1 meter long would it be:
300 / 1282.400 MHz = .2339363693075 cm (wave length for my tx freq.)
1 meter (my desired cable length) = 100 cm
100 cm / .2339363693075 cm = 427.4666666667 wave lengths
.2339363693075 cm * 428 even multiple wave lengths =
100.1247660636 cm cable that is 428 1282.400 full wave lengths.

Whew! I'm I way off here? Thank you. - Chris N8UDK

> jerks like you wouldn't know that, would ya sport?

More name calling. Is there a single person here that thinks with the
way you conduct yourself you are a leader to be respected?

> First off, waistoid, who said anything about being "important"? That is
> your conclusion. I am no more important than anyone else. What I was
> referring to is my background. Check it out, dildohead, har har!

More name calling.

You're a better source for humor than that asshole we
> have in the White House ! Haw haw ...

I am a Republican and I do not like Clinton but calling him profane
names?
Why?

More from Bob:

Oh, I intend to. And I post for me, not them.
You are (still) an asshole, and you will be
one tomorrow. I plan to have some fun due
to that fact.

As to the comment about "who I am", what
makes you think I was referring to being
"important"? That is your assumption. I
could have meant it another way, as in

some manner of referring to my background.

See ya around jagoff... oh, and any leader
worth spit has made enemies. That is
usually the case, when someone does
the "right thing", rather than the "popular"
thing.

It is I who am getting to you, and the people
who DONT LIKE YOU, love those posts...
and they get better, asshole ... a lot better.

Later sport,
Bob

I like pizza but I do not embed it in my WWW page. There is no reason
to.

> You really are a minimalist sorta guy ain't you Burt.

Another brave gam, FROM A DISTANCE!

A man went to a guts store to get some guts for dinner. He sees a sign
remarking on the quality of guts offered at this particular gut
store. So he asks the butcher: "How much for Engineer guts?"
"3 dollars an ounce."
"How much for teacher guts?"
"4 dollars an ounce."
"How much for ham operator guts?"
"100 dollars an ounce."
"Why is ham operator guts so much more?"
"Do you know how many hams you need to kill to get one ounce of guts?

>year for 10 years.

Yeah, that's right. Then they reduced the fee from $7/year to $3/year,
but they never announced that the fee had been eliminated.

>NOWHERE on any of the forms did I see that a renewall fee would be
>required. I didn't even find out it was a possibility until long
>AFTER I had applied. So what's the deal? Is the FCC trying to pull
>a fast one on us, or is it just an unfounded rumor, based very

No, the FCC announced this stuff *way* in advance and you came
into the game late. There was so much discussion of this topic
that I'm surprised you completely missed it.

> CB Radio KADF-6895 since September, 1976

Drew:

AGAIN, you show your intellectual deficiency, whgich has and will continue to get you into trouble. The information from the ARG website is NOT a "guide to the animals in the zoo (3894.5)" Where did you get the idea that this was the list of people on that frequency? They talk about the ARG on that frequency, but that is not the group on 3894.5. I maintain that a great many of these people never show up on this frequency. That can be proven.

You are a pathetic individual, livid when people accuse you of libel and defamation of character, (all true and can be witnessed daily), but happy to do it to others every day. I offered via private E-mail to help you and instead you continue to smear the names and calls of innocent hams all over the net. I have had three e-mails from people telling me what an asshole you are (because they read your semi-literate postings on other subjects) and to give it up. I was hoping that maybe you were just someone who was mistaken, with no particular malice in his heart, but you are obviously a dipshit of the first order and I will leave it to the list of 14 hams whose calls you have erroneously used to deal with you. Go back to CB where you belong. No matter what happens with the hams in question, at a minimum, HF will not be a welcome place for you even if you study hard and manage that big 13 wpm.

Dave

Tom:

That is correct. If that Drew kid would have gotten at least that part
of it right, he would have been correct on one item in a dozen postings.

: such products from the US by mail, and have. Did I miss something?

Actually, I think the labels I've seen allow shipment to Canadian, as well as US, addresses. OTOH, shipment to Mexico would not be allowed.

I'm not sure why this policy exists, but I've seen a label to that effect on both Borland and Microsoft products. I've also bought at least one piece of software that had both US and Canadian registration cards, with the appropriate prepaid postage.

Both of these vendors sell multi-lingual versions of their products, as can be seen during the setup procedure.

Could it be as simple as insuring that the appropriate printed materials are included, for shipment to other countries?

There is/was a ban on exporting *technology* to certain countries such as the former Soviet Union, which included both computers and software. But I *think* exports are even allowed to Taiwan, even with the problem of open software piracy there.

After repeated playings of "The Stump-Jumper Polka", a new tune was played tonight. This one is entitled "Herbie", apparently in dedication to KD4FN in the Virgin Islands. As of this writing, it has been played 4 times in a row.

Who's playing these? According to what the others say, it's KC3AU, described by fellow 3894.5'ers as "The phoney preacher from Scranton, Pennsylvania."

Who's voice(s) is it on the songs?

After listening for the last three evenings, I have to admit, this is rather entertaining. Beats the garbage on prime-time TV! <g>

20 db over in Los Angeles at 20:00 PST tonight. Religious music
always sucks and belongs to the DULL REPETITION class of iritation.
Although the technique works great in the Citizens Band for creating
Hate & Discontent, it does not enjoy the same level of successs on the
amateur radio frequencies. I believe it is due to the higher level of
everything associated with users in the amateur radio bands, eh?
Just a thought.

Burt the Fisher,
Aint he a l'il pisser?
Saying WE aint got no guts,
What a narcissistic, arrogant putz!
So here he sits, whackin his weeny,
With his waxed up hand, vaselined and sheeny.
Can't help but wonder if his parents know,
Their son just loves the life that's low.
So Burt the next time nature calls,
Don't look for my guts, just kiss my balls !

DOZENS
==========
Burt's mama was soooo ugly, that the toilet would flush automatically when she walked by. His mama was sooooooooo dumb, that she thought a sanitary napkin was to wipe off food when you have a cold. Burts daddy was soooooo ugly, that he could make snow stop falling and head back to the clouds if he looked up. His daddy was sooooooo dumb, that he made asked if he should salt his buffalo chips.

Burt, you're still a total asshole...but what makes you think Bozo Papers
is about you? I guess the foe shits, huh?

>Your comments on the "BOZOPAPERS", really was quite dull.

Really? Well, thanks for saying so. That means it must have really pissed
you off.

>Further it shows it is indeed YOU who is the angry little man.

Nah... and I am 6' 1" plus, so hardly "little".

>I have heard from some of the people YOU have made enemies of
>and you are not respected.

Wrong again. My enemies made an enemy of me. I do not "make enemies". I
NEVER start trouble, but neither do I run from it. No leader worth spit
would not break some eggs, to make that wonderful omelette. But then,
jerks like you wouldn't know that, would ya sport?

>You had said something "you do not know who I am."
>Inferring you were someone important. There is no one in the ham
>community >I consider important

First off, waistoid, who said anything about being "important"? That is
your conclusion. I am no more important than anyone else. What I was
referring to is my background. Check it out, dildohead, har har!

>Clearly I have gotten to you. >If I am a nobody you would not respond.
>

Not quite. I would have just verbally punk slapped you, and had a quick
laugh. But then, you wanted to press it. You're a funny guy, dude! I could
sit here and read your tripe, and have all the ammunition I would ever
need for satire. You're a better source for humor than that asshole we
have in the White House ! Haw haw ...

>Post all you want, no one takes you seriously.

Who says any of this is "serious"? You really are a funny guy, Burt !

Adios sport

Bob

How about looking at it another way?

Number of Members
40 000 * *
35 000 * * * * *
30 000 * * *
25 000
20 000
15 000
10 000
5 000
0

Y 1 1 1 1 1 1 1 1 1
E 9 9 9 9 9 9 9 9 9
A 8 8 8 8 9 9 9 9 9
R 6 7 8 9 0 1 2 3 4 5

Lies and Statistics?

A much more sensible way would be dM/dt = 1000/year - not a good figure,
in 29 years there will be no members at all.

We appear to have had a 1.2 dB loss in membership.

Drew:

This is quite boring and useless. Your lack of ability to comprehend what is going on makes your postings a joke. By now, anyone who is interested can turn on his own receiver and probably do a much better job. How about passing the baton to someone who knows what's going on? Because you can't quite seem to understand any of this, you are running into the problem of using the wrong callsigns or inaccurately "reporting" what you hear about them, thereby causing innocent people harm. What you are doing is much worse than what happens on 3894.5, yet you offer no apology.

Let me help a bit:
-The "Herbie" song is clearly in tribute to "KV4FZ" (not poor "KD4FN")
-No "3894.5er", as you say, other than possibly the occasional passer-by (jammer) has ever referred to KC3AU as a "phony preacher" (it is not spelled "phoney", BTW)
-EVERYONE knows, even the jammers, that KC3AU is not the one playing the music. Nobody has *ever* said that.

Keep up this wonderful, valuable, service to us all! The moon is still made of "green cheese", right?

You have managed to get one fact straight in your series of worthless and harmful postings: It IS better than the garbage on prime-time TV.

Dave

Might I also suggest regular (every ten years?) re-qualification for all higher classes of license using the then current examinations. If that change ever came in, the anti-cw lobby might really bloom!

I wonder how many of today's multiple-guess Extras, perhaps some who were originally examined by Extra's who qualified with the aid of a physician's certificates, can achieve one solid minute of copy at 20 wpm.

Do I sound just a tiny bit cynical about the integrity of the incentive licensing system :-)

Nada in G. There was an FOC cw contest down the bottom end of the
band with just locals (<300 miles) chattering away, but I never heard
a 'phone signal all week end.

>

I agree that their continued support of CW is potentially lethal for the hobby, and thus shortsighted. But hey, grandpappy had to pass a code test in '39, so it is important that today's internet-savvy young people do so.

What is really incomprehensible is their desire to make the tests "more stringent." What the hell for? Less stringent would be better.

On a positive note, if I read the bulletin correctly, they would give HF privileges (some) to the Intermediate class, which only passes a 5 wpm test. If that's the proposal, it is a small step in the right direction.

I guess we just need to wait a while for the old timers to die off. If ham radio is still around, once they're gone we can finally kill CW off. Judging from what I hear on 20M SSB, lots of them are on death's door.

>Let me help a bit:
>-The "Herbie" song is clearly in tribute to "KV4FZ"

Thank you for helping to establish that fact for us. It's kind of hard to get the call sign out of the song when it's being overmodulated on sideband and there are several other stations jamming as it's being played.

>-No "3894.5er", as you say, other than possibly the occasional passer-by
>(jammer) has ever referred to KC3AU as a "phony preacher" (it is not
>spelled "phoney", BTW)

I didn't say that he WAS; I said "according to others." FYI, there is a station, apparently with a tape recording, that constantly transmits "KC3AU, the phony preacher in Scranton, Pennsylvania who manufacturers tape recordings with which to jam his fellow amateurs."

>-EVERYONE knows, even the jammers, that KC3AU is not the one playing the
>music. Nobody has *ever* said that.

Read above paragraph. Again, I didn't say he was, one of his "friends" on there is constantly saying that it's him. Duh!

>-The question is "'whose' voice is it on the songs" (not "whos')

Oh, I get it. We have a grammar freak here who's just arguing for the sake of argument. Geez, you're a worse instigator than they are.

>Keep up this wonderful, valuable, service to us all! The moon is made of
>"green cheese", right?

According to you, it probably is.

>siree!

Nope, there sure isn't. Your argument still does not answer the question. Other than the sex issue, what does Lambda offer that other amateur groups do not? Nothing. And thats our point.

You can avoid the issue all you want. If a person feels bad because a deviant, detestable behavior of theirs is not accepted by the community then they have a choice. They can either live with it and accept it, or change their behavior. It's that simple. It is not our *responsibility* to accept this type of *behavior*.

There really is no LEGAL way to jam their equipment. The only thing
that you could hope to do is cause severe RFI but then it would mean
that your equipment is not operating within accepted parameters.
Your best bet is to TALK to your neighbors. Be neighborly! It sure
can avoid problems.

Scary to think Americans can not tune into any "broadcast" we want to. What's next? A complete ban on...say 1450 kHz AM "Broadcast Band" because some jock said something against the Government? What happened to the freedom to listen to radio signals of our choice? Reeks of the old "don't get caught" with your radio tuned to the "VOA" in certain areas of the World. If you don't want to be heard scramble.

JAS in the Midwest.

Wasn't there something called "coherent cw" in the '70s that did exactly
this? As I recall, the system used a keyer which enforced 3:1 dah/dit
ratios and was phase-locked to the carrier frequency (maybe it was
just crystal controlled -- it's been a while). I also believe that
the receiver used an analog integrate and dump detector since the
dot/dash/space timings were exactly known and integrally related.

Basically to establish communications you had to agree on a
frequency (maybe to the nearest few Hz) and a morse speed...
Gasp.

You're right though, none of that high tech stuff would help a
straight key... especially if your fist is as bad as mine...

It's a possibility to get into the speakers with large amounts of
power on HF bands, etc.. however, I think the easier route would
be to file a noise complaint.

John Noel <jhn5012@tntech.edu> wrote:

Dear Drew:

#1, where did you get that list?

#2, did you realize that list is at least 5 months old, and many of the calls have changed?

#3, what is your agenda? Are you out to blacklist people? Are you trying to be funny? Are you a roving reporter-to-be with little else to do?

#4, PorkButt is not among your lists of people. He is Richard Whitten, WB2OTK.

Drew, the more I look at what you did, the more concerned I get. Making lists of people and putting them on the Internet not knowing who the people are or what their agenda is can be downright problematic. I guess I'd think before doing something like this again. I'm glad you're enjoying a new-found hobby (which is really a service first, NOT a hobby), but it might have been easier for you if you had been here just a couple months ago when all of this was discussed in this newsgroup ad nauseum. Just ignore it, join it as a good example, or keep listening, but *please* don't exacerbate an already troublesome situation.

Greetings Mr. Roy Lewallen,

Sounds like you got flamed by some "lid". I for one, of many I'm sure,
respect and appreciate your tremendous contribution.

Your software contribution is well received and most of us know you
are also a frequent and important usenet contributor. You are a
true role model - I personally can but dream of either, much less
achieve both.

Please don't let some uninformed (ignorant) person affect you. Easy
to say I know.

There is all too often some would be "professional" programmer making
these foolish statements toward a sucessful work. After all it's
much easier to criticize, than to actually contribute - and
unfortunately it appears to be impossible for some to do both
at once.

On the other hand there are many good and helpful people around.

THANK YOU SIR!

73,
Jim - KU5S

> testimony to the tremendous accomplishment of the MININEC authors.

Anyone who has developed commercial software understands that the user
interface is the hardest and, often, most important part. This has
nothing to do with lines of code. User interfaces are very hard to get
right and often make the difference between success and failure.
Analysis software, while requiring considerable technical understanding,
is relatively definable. That is, you could throw the spec over a wall
and someone could develop it correctly. This is impossible with user
interfaces. They require a feel for what matters to users, a lot of
interaction with users and, most importantly, an understanding of the
relationship between features and tech suppport.

I am interested in *NEC* and looked at the public domain stuff. If it
had been easy and obvious to use I would be using it now. As it is, I
am not using it. I plan to evaluate (with the expectation of buying)

your programs. Since many others feel the same way its value is self evident. Free software, as usual, is worth what you pay for it. "Derivative works" are often much more useful.

Good luck.

Randy

Well I tell you. It is a miracle of modern SOTA. Through the use of
chronosynclasticinfudibulum, the sound waves are transformed to a SS RF
signal.

Very simple it's not a vacuum as in space, but in reality an 8
pound OREK vacuum as used by fine hotels and establishments worldwide,
which could explain why Carl sucks so much. His head and personality are
empty allowing for lots of CW decoding. This would also explain why he
can't type and why he is clueless as to his surroundings.

I hope this answers you question. It's one of those things like the 2
headed Lennie or the side show geek (actually one and the same)

For those in the pool..the count is now 17 with 5 days to go

I hope this answers your question(s). Please feel free to utilize this
service at any time. Carl and I are in constant contact to provide YOU,
the reader with updated accurate information concerning this wellbred??
lovable??? person???

>
>Could not have said it better--still love to here my call come back
>through the noise from some far away place.

I prefer to see the text coming back, error free, to the screen.
It is a thrill, especially when done with very low power and a
simple antenna, IE pushing the path to the limits. Done with
clumsy manual brute force, I don't find it exciting, though
others may.

>It is magic!!

Nope, just good engineering. Magic is always a sham, an illusion. I
much prefer reality, especially if I have a hand in creating that
bit of reality through exercise of good engineering techniques.
Now one of the SF pundits once said that any sufficiently advanced
technology is indistinguishable from magic, so perhaps in that sense
it is magic. But I like to look behind the curtain and see how the
trick is really done, so I don't see it as magic. I see it as clever
engineering. And that's better, because it is a real thing and not
an illusion.

Now the roar of the rotary sparkgap, and the smell of ozone, was
probably a visceral excitement in the old days, as was the raspy
buzz of faint signals in the headphones, brought in by the galena
detector. But those days are over (long over). I consider brute
force methods, such as OOK Morse, crude and unesthetic. I like
to see just how elegant a solution I can design to meet a given
situation.

Matched filtering and good coding can allow reception of well
designed signals below the audible threshold. That's elegant.
And good engineering design can allow much higher rate signaling,
error free, than can manual OOK Morse. That's elegant too because
it is conservative of time and spectrum. I love it when a plan
comes together, when the equations are turned to hardware, and
it works exactly as predicted. I even love it when it doesn't

work as predicted because it gives me a puzzle to solve to find
out what went wrong. To engineer is human. Perhaps it is the
most human thing we can do because it is a challenge of the
highest order to the intellect, and it is that intellect which
separates us from the beasts.

Then what of a whole nation? Do you not judge a whole people for the sins of their fathers? There are many law abiding, honest Christians in that nation. Yet you paint them all the same and claim to ignore them if they try to talk to you.

You find an individual guilty without so much as a hello, simply because of his national origin. Is that not prejudice of the kind you claim to despise? Was that not the very action of those aforementioned fathers that (rightly) so disgust you?

Doubtless you enjoy trolling - and I might be falling into your trap - but I have not been unpleasant to you. Could you grant me a straight answer?

wah wah wah !!! Poor Burtie-worty. Wadda madda widdu girl? Did Bobby-wobby hurt oooo widdu feewings? You keep aluding to some group on here, who you seem to think would have sympathy for you, or that would think that giving you back what you give everyone else is somehow inappropriate. THAT'S THE BEST YET !!

I normally don't curse people out, unless there is a good reason. In your case, there is; your a sarcastic, witless dolt with nothing to do other than to mess with people, who ain't messing with you. I don't like people like you, and I am neither intimidated by your early vailed threats, nor am I swayed by references to some imagined damage this might be doing to my reputation. Truth is, anyone who would fault me for telling you off is probably not someone who I would give a lot of credibility to in the first place.

Remember, sport: I did not throw any insult at you, until you said something off the wall to me. Now, you may have been used to folks just acquiescing to your brand of bullshit, but guess what? Now, I am not going to go away. I am going to stay right here, and every time you say something off the wall .... I am gonna shove it right up your tight yankee asshole. Got it, sport?

You're a rePUBICan? Man, that figures! I am neither a rePUBICan or a demoCRAP. I do this real stupid thing...can't help it. Been doing it all my life. I think some folks call it 'THINKING FOR MYSELF'. I can engage my brain, READ, listen to other opinions, and then DRAW MY OWN CONCLUSIONS. I don't like "Clinton", because Clinton is a lying, scheming, overly ambitous, cheating crook, and then there is HER HUSBAND TOO !!, hawr hawr.

For the record, weenie, I weigh exactly ... (wait a minute) .... 192. I work out 5 days a week, don't smoke (for 5 years now), and drink only occassionally. I can run 3 miles .... how about you, porky? I can do 50 situps for 7 different sets .. how about you, porky? I also lift weights, so maybe you meant I can bench press 300. How about you, porky? You must have had your mama in mind when you suggested that I weigh 300, fool! Now, go get your shoe shine box and get out and go to work ! Your mama needs a pair of new shoes ... and a face job, while you're at it too.

I am not going to reply in detail here, since I find the subject matter so disgusting to my sense of decency, that I could really "lose it" here. Suffice to say if I were to witness a man trying to seduce a minor, and no one was looking, I would not hesitate to find a nice tall tree, some rope, and administer a little "country justice".
I think that is all the point I need to make here !

>
>I know its not QAM but its a tight channel

HF CW has two serious deficits, Christopher. First, by using OOK, it gives
away considerable advantage to other methods which are truly antipodal.
And second, because it uses an irregular code, it cannot be match filtered,
IE dots and dashes are different AM modulating frequencies passing through
the same channel, so a filter can't be formed to optimally separate them
from noise. Contrary to what some others have said, Morse is not a binary
code. It is a timing code with 5 distinct states, only two of which are
actually carriers of signal energy. OOK is binary, but only in a trivial
sense in regard to the total information carrying system of modulation
and code.

I have a C50 question. According ot the boot load section of the
databook, it says that their are several methods of loading an external
program in to internal memory, however if you look at the schematic
for the cheap-O kit, the bus is not set for the 8-bit parallel load
at FFFF (uses *BR,*DS at reset).

Is it possible that the 27C256 has the appropriate bits set?

Hi Darren,

Most certainly I have to agree with your comments re the dissemination
of news and info, providing of course that you have access to such
modes.

Re belonging to the RSGB, and be advised that I am not their greatest
fan, they are the representative body in the UK for amateur radio with
the powers-that-be, and as such are currently our only lobbying
organisation. That is enough for me to support them, if not their every
decision.

Regards ... Mike

>I see, the foundation of your objection to LARC is your belief that
>"homosexual" directly implies "homosexual sex". I suppose you don't
>have any room in your narrow universe for celibate homosexuals? Do
>you condemn them, too?

It does. And it allways will. If for no other reason than for sex with like gender, then why label themselves. There is not such thing as a celibate homosexual, nor is there a celibate heterosexual. They will at one time or another participate in a sexual activity or there would be no need for classification.

>As for the "YL club crap", YL implies _grouping by social interest_.
>I believe that LARC offers a different _grouping by social interest_.

Homosexuality is not a social interest, it is social deviance.

>You seem to believe all gay people are constantly seeking sex partners.

They are. They cannot assume that others of their same sex have the same desires sexualy as they do. Homosexuals must gather in groups or solicit for partners through other means. For heterosexuals it is different. A straight male can assume that any female is a likely partner in the reproductive role, gays cannot.. They feel intimidated and left out, so they must let everyone know who and what they are to attract a partner.

>Of the several homosexual people I've known, not a single one
>acted this way, and, interestingly enough, not a single one of them
>condemned me for being heterosexual. I'm not some screaming
>liberal; I'm just a person that values interpersonal respect. I'm
>even teaching my three children the same kind of respect - does
>that make me a bad parent?

If you raise your children to have equal or lesser values than yourself when it comes to moral and ethical issues like this, then the answer is yes. It's this stupid "As long as it doesn't effect me" attitude that hurts society. Everyone waits for someone else to do the work for them or have things handed to them because they are "entitled" to it. Nobaody wants to take responsibility for their actions. Hell, even the gays try to do it by saying they were born that wayand have no controll over it, to place the blame for their shamefull acts on somone or something other than themselves.

Will you teach your children that respect means that if a friend of theirs is doing drugs, not to worry about it as long as it does not directly effect them? Or are you going to teach them to be a true friend by strengthening their friends by pointing out their weak ponts

and getting them help? Are you going to teach them not to vote when others will probably vote and they don't need to, or feel their vote counts? See my point here? I am not critisizing you as a parent, I do not know you and for all I know you may be a wonderful parent. But to assert that leaving an issue alone it will go away, and by not dealing with issues of character and moral value will make problems correct themselves is absurd.

I nor anyone else need 'come up' with elaborate 'reasons' for why this type of activity is bad. Its right there in front of your faces people.

My universe is the same as yours. Because I choose to see the difference between what is right and wrong here, and speak out about it does not narrow the scope my reality and our universe. To say someone is closed minded implies that one is not interested in facts reason or argument concerning any specific subject. Since this issue is about an unacceptable, deviant, unsafe, and immoral behavior it does not apply. There will be no convincing evidence that homosexuality is a behavior to be tolerated, as much so the behavior of child molesters/pedophiles, murderers and theives. And yes they equate with the exception of the murderers.

>
>1.) The hobby. I can't afford to have the best but I can design and
>build gear and have fun.

If you are willing to design and build, you *can* have the best,
even on a relatively tight budget. That's thanks to the power of
modern VLSI and modern coding techniques.

>2.) Discipline. The challenge of learning and accomplishing the effort
>to earn my ticket.

That can't be why you're *in* amateur radio. It might be a reason
you wanted to take a test *before* you got in. Tests are once in a
lifetime, what you *do* in amateur radio is every day of the rest of
your life. *That's* where the real challenges and real accomplishments
can occur, for a lifetime. The value of a license is not in what it
takes to get it, but in what it allows you to *do*, today and tommorrow.

>3.) To meet people who have things in common with me.

Yeah, good reason, and you want to be able to *exchange* ideas with
them. That takes throughput. Stylized contacts at a few WPM just aren't
sufficient to develop strong relationships with other people.

>4.) I want to keep the term 'Amateur' in Amateur Radio. I'm not
>interested in CB, GMRS, or Family Radio Service.

Good. Remember that the only thing unique about amateur radio in
comparison to those other services is that amateurs are encouraged
to experiment and innovate. The others are required by law to use
sealed boxes. So accept the challenge. Learn modern technology,
and use it to produce superior communications systems.

Bzzzzzzzt! Game over. Thanks for playing. The correct abbreviation
is Mc/s, and was so used and so marked in the era when that was the
accepted term. The reason Mc/s was changed to MHz was to bring it
into conformity with the other SI units which are all named for
pioneering scientists whose work is associated with those units,
IE Andre Marie Ampere, Alessandro Volta, Michael Faraday, Joseph
Henry, James Watt, etc.

Perhaps because none of them are trained to use Morse for US military
communications. It is a SIGINT, IE *spy*, school where intercept operators
are trained to eavesdrop on the Morse usage of other nations' miliary
communications systems (that's mostly limited to a few of the more
backward military powers today, of course.)

Maybe you can contact KW via e-mail and ask for fax of 733E schematic.
Compare the 4 resistors in the face panel and modify as necessary. Also,
on the Boston Am Radio Club ftp sight, there is a file that is a 732 mod
sheet and contains a chart of 732 model types and the 4 resistors in the
face panel.
Try http://www.acs.oakland.edu/barc/archives.html

> Mark -- WA9ETW

Yeah, 7.290 or 7.295 Mhz AM! I'm not trying to be a smart ass, but you never asked for a 2 meter frequency, only what frequency that operators of such gear hang out.

Even the activity on 2 meter SSB in my area (Philadelphia) is next to none, so forget about AM. Years ago they used the portion between 144.10 to 146 before the 2 meter FM repeater sub-band was established. Now all you hear is FM on frequencies above 144.30 or so. The SSB calling frequency is 144.20, and any activity that happens to be on SSB is between 144.1 and 144.30.

The band plan says nothing about AM operation, although it is still allowed. The band plan mentions SSB, Oscar, FM repeater and Packet modes, but no AM. The portion between 145.50 and 145.80 simply says, "Miscellaneous and expiremental modes", so I would assume that if you wanted to stick to the ARRL band plan, you are better off there.

There used to be a few old timers around here that had an AM net on 145.80, but I haven't heard them on for years. A couple of friends of mine had old Heathkit "Lunchboxes" that they bought from a hamfest. They came with 145.50 crystals. Those radios had super-regenerative receivers that picked up just about everything at once, so if you were pretty close it didn't matter what transmit crystal you had plugged in! Sorry I can't help more. If there is indeed activity around the country on 2 meter AM, it is probably pretty localized and depends on what crystals were popular in that particular area 30 or more years ago.

It's probably been mentioned lately, but I heard that recent vintage ICOM
IC-706 transceivers do NOT have 2M AM mode, but early ones do. If you
look at the recent ads, some specifically say 2M does not have AM. My older
706 (bought when first available) does have 2M AM. I haven't tried a later
IC-706 to see if it's the case.

>"Loose lips sink ships" was the WWII motto.

Yeah, but that was a caution for sailors *in port*, where spies might
be lurking.

>There was a very interesting thread on the BoatAnchors email list about
>how just a receiver's local oscillator put out enough of a signal to DF
>on. Ships had to observe long periods with power removed from all radios
>to avoid detection.

As usual, the military has an acronym for this. It is EMCON, which
stands for ElectroMagnetic CONtrol. It means more than mere radio
silence, it means as near zero detectable EM emissions as can be
achieved while still accomplishing mission objectives.

Note that light is EM, and under EMCON, even use of blinkers is
strictly controlled. A blinker signal can be spotted from miles
away by a lurking submarine riding the handles. It can also be
seen from a satellite in some geometries. Of course a sat can
spot a task force even if they are operating under EMCON, either
via passive visible imagery, or via IR signatures, or in the
case of the Russian RORSATs, by active radar imaging.

Receiver radiation can be detected by orbiting satellites too.
The US has a series of SIGINT satellites which can do this.
Naturally, use of an actual transmitter would stand out like
a homing beacon. Bombers and missiles can easily home on a
coherent narrowband signal.

To an extent, SS has made EMCON less necessary, since SS makes
the task of detecting the presence of a signal *much* harder,
because by nature and design it has a low probability of intercept
except by those who know its exact spreading sequence. Use of CW,
however, would be definitely hazardous to the health of a task force
going in harm's way since it is easily detected and easily DFed.

It's strictly a revenue enhancement technique. Put simply, if you are
willing to pay the 1st time, the government knows you'll pay the next
time and the next time...so forth and so on

Kinda like incentive licensing..if you want something bad enough, you'll
pay for it (had to put that in)

Isn't this a great country?? or what??

>I'm looking for any algorithm that improves the SNR.
>Is there anything available? I'm especially interested in
>algorithms that gives a improvement in Morse decoding.

Well, we have to be a bit careful with terms here. There are three quantities which we sometimes use interchangably, but which aren't necessarily the same things at all. Those are CNR, SNR, and Eb/No.

The basic algorithm for improving CNR is

```
while (CNR < desired)
{
transmitter_power++;
}
```

That will also work to increase SNR and Eb/No. :-)

Now we can also do some CNR improvement in the receiver by such things as improving the receiver noise figure and limiting the receiver passband to the occupied bandwidth of the desired signal. If you are doing DSP at IF, a FIR filter algorithm would be useful here. Again, this will also improve SNR and Eb/No.

We can go a step further with SNR. Here we are interested in improving the intelligence bearing signal's power ratio vs channel noise rather than the gross carrier power to noise ratio. The demodulator of the receiver can play a role here. It should be optimized to recover as much signal power as possible while rejecting as much noise power as possible. A synchronous detector is an example of this. This takes advantage of coherency in the signal and redundancy in its spectrum versus the random nature of noise. This can offer a 3 db improvement in SNR vs CNR in the simplest case of a DSB modulation. We can also employ post-detection baseband filtering to further enhance SNR. This is where DSP filtering is most commonly used today.

Now finally, we can increase Eb/No for some codes. If the signal is coherent, synchronous, and uses uniform symbols, we can use a perfect matched filter in the baseband, and an integrate and dump symbol detector. This takes advantage of the fact that symbol power will add over the symbol duration while noise power will tend

to sum to zero. We can also use other demodulation methods for certain modulations to take advantage of the Hamming distance of various symbols in signal space versus the random noise spectrum in signal space. This can often yield another 6 db over raw SNR. We can also take advantage of FEC to achieve symbol gain vs noise. This is extremely powerful, and can allow process gains of in excess of 30 db in some cases.

Unfortunately, Morse isn't a uniform code, and is normally also not sent in a synchronous or coherent fashion, and it doesn't support FEC coding. Thus we can't improve its SNR or Eb/No over the raw CNR value. That's why machine detection of Morse can be no better than ordinary aural detection of Morse. Using other modulations and codes, we can achieve Eb/No of 40 db or better over CNR in some cases. That's why Morse is generally a very poor choice for weak signal coding.

This is called Farnsworth coding, and all the programs in common use
allow it. That's a good thing because ARRL VEs don't test you for Morse
Code, they test you for Farnsworth Code with this non-standard timing.
(The real International Morse Code is strictly defined with precise
timing specifications, Morse is after all a timing code, and Farnsworth
isn't Morse because it doesn't meet those timing specifications.)

$$
$
Hello!! How would you like to make thousands of dollars, quickly,legally,
and with not catch? Then keep reading.... THIS IS COOL!!
$$
$

Please take five minutes to read this article: IT WILL CHANGE YOUR LIFE, just like it did for mine. It's true! You can make up to or over $50,000 in four to six weeks, maybe sooner!

I personally have never believed in a so called "Free Lunch" and have always worked hard to support my family. But this idea is so simple involving a modest $5.00 investment that I simply had to try it. With so many people involved I became convinced that I too could benefit. And, as I found out, this system really does work!!!

Within 7 days, I started getting some response in the mail! I was shocked!! But pleasantly surprised. I still didn't believe thousands were on the way, and didn't give it another thought. But then the money kept coming in, triplingin size and multiplying by 10 to 20 times the amount I got in the first week!!! In the first week I received about $25, but after the second week, I had a total near $1,000! In the third week I received just short of $10,000, and everyday there would litterally be a bundle of letters! This is the start of my fifth week and at total I have made over $63,986 (yesterday's grand total so far) and the letters are still coming!!! And I am starting again. If you are interested there are three basic steps, all of which are pretty simple.

Let me tell you how this SYSTEM works and most imortantly, WHY IT WORKS......also, make sure you print a copy of this letter NOW!!!!, so you can get the information off of it, and begin earning money today!

The process is very simple, and it consists of just three easy steps:

$$$$$$ THE FIRST STEP $$$$$$

Get five seperate pieces of paper and write the following words on each piece of paper...."Please add me to your mailing list, your name was in position number 1." Then write your name and address on the piece of paper. Now repeat the process with the other four pieces of paper, except of course you will write".......your name was in position number 2" on the second piece, and ".......your name was in position number 3" on the third piece....and so on....you get it. Now place each piece of paper around a $1 bill and place inside of the envelopes. You should now have five envelopes, with one dollar in each, wrapped in a piecs of paper that says

"please add me to your mailing list, your name was in posisiton so an so"(you will be added to the mailing list, that is what makes it legal) Make sure that the position number matches the position of the person that your are mailing to. That is how they will tell the progress of this article. Now mail the envelope to the following five addresses:

1) G. Arrigo
P.O. BOX
8952 Schlieren
Switzerland

2) S. Hines
9804 Kingsmand
Dallas, TX 75228

3) Joey Temple
513 Uncle Tom St.
Greentown, IN 46936

4) R. Bushy
15123 19a Ave.
Surrey, B.C. Canada
V4A 7G8

5) Paul Blevins
400 John Wesley Blvd.
Apartment 198
Bossier City, La 71112

$$$$$ THE SECOND STEP $$$$$

Now take the name #1 off the list that you see above, move the other four names up the list (2 becomes 1,3 becomes 2, ect...), and put your name and address in position 5.

$$$$$ THE THIRD STEP $$$$$

Now rewrite this article to tell your own story (you could probably just edit this one) and be sure to put your name in position 5 and move up the others, and post it in at leat 250 newsgroup. The more the exposure, the more responses you will get. All you need is a good foundation of returns.
****
AND THAT'S IT!!!!! THAT IS THE ONLY THREE STEPS INVOLVED!!!
****

You are now in the mail order business and will now start to receive your $1 envelopes from people all over within a few days!

HINT: THE MORE NEWSGROUPS YOU POST TO -> THE MORE MONEY Y0U WILL MAKE.

LET ME TELL YOU WHY THIS SYSTEM WORKS AND WHAT IS ITS POTENTIAL.

Out of every 200 postings lets say you receive only 5 responses, which is very low. So you made $5 with your name in position #5. Now then, lets say that each of those people make 200 postings for themselves. Now your name is posted 1000 times in position 4, and still out there in position 5, and you now make $50. Now what is 50 times 200. So for positions 3 your name is out there 10,000 times. If the trend continues, your name will be posted about 250,000-1,000,000 times!!! You can easily see how you can make fast money with only 5 responses for each 200 postings.

THE POTENTIAL IS FANTASTIC!!!!

When your name no longer appears on the list, you just take the latest posting that is in the latest newsgroups, and send out another $5 to the names on the list and start again. (Like I am doing now) People have asked, "What if the plan is played out and no one sends you money, then what?" All I say is "So what? It's only $5" what are the chances of that happening when there are thousands of newsgroups and tons of new honest users and people joining the internet each day and are willing to give it a try?!? Estimates are between 20,000 and 50,000 new users every day. Remember, play FAIR and HONEST, and THIS WILL WORK. I PROMISE YOU! But you also have to be patient.

Make sure you print this out right now! Also, keep a list of everyone who send you money, you may be able to sell the list to business when you have enough. Also keep and eye on the newsgroups and keep everyone playing fair! You do not have to cheat to make your money!! GOOD LUCK TO EVERYONE, PLAY FAIR, AND YOU WILL BE REWARED WELL.

In article <32fcbf35.7482873@news.primenet.com>,
Rob Neff <n7ory*@*primenet.com> wrote:
>>I see, the foundation of your objection to LARC is your belief that
>>"homosexual" directly implies "homosexual sex". I suppose you don't
>>have any room in your narrow universe for celibate homosexuals? Do
>>you condemn them, too?
>
>It does. And it allways will. If for no other reason than for sex with
>like gender, then why label themselves. There is not such thing as a
>celibate homosexual, nor is there a celibate heterosexual. They will
>at one time or another participate in a sexual activity or there would
>be no need for classification.

Using your logic, a virgin is asexual, right? Does the first sex
act one perform determine one's sexual proclivity? I don't think so.
Even my Webster's dictionary defines "heterosexual" and "homosexual"
in terms of sexual _desire_, not sexual practice. There's a
difference, you know, whether you're willing to accept or not.
The simple fact is that you're mistaken - there are celibate
heterosexuals and celibate homosexuals. Now, with this cleared
up, perhaps you'll explain if you condemn celibate homosexuals...

>>As for the "YL club crap", YL implies _grouping by social interest_.
>>I believe that LARC offers a different _grouping by social interest_.
>
>Homosexuality is not a social interest, it is social deviance.

It appears futile to discuss this with you, but some of your own
behavior is probably considered deviant by some people. One person's
interest is another's deviation. You're refusing to objectively
discuss this issue, and I can't help but wonder why.

>>You seem to believe all gay people are constantly seeking sex partners.
>
>They are. They cannot assume that others of their same sex have the
>same desires sexualy as they do. Homosexuals must gather in groups or
>solicit for partners through other means. For heterosexuals it is
>different. A straight male can assume that any female is a likely
>partner in the reproductive role, gays cannot.. They feel intimidated
>and left out, so they must let everyone know who and what they are to
>attract a partner.

Well, I don't know about you, but the first think that crosses my
mind when I meet someone is not whether they're useful as a

partner in reproduction. Perhaps I'm just silly or something,
but I usually think about other things, like, is this person
interesting to talk to?, do I have interests in common with this
person?.... things like that. Suitability for sex is just not
on my list.

>>Of the several homosexual people I've known, not a single one
>>acted this way, and, interestingly enough, not a single one of them
>>condemned me for being heterosexual. I'm not some screaming
>>liberal; I'm just a person that values interpersonal respect. I'm

>>that make me a bad parent?
>
>If you raise your children to have equal or lesser values than
>yourself when it comes to moral and ethical issues like this, then the
>answer is yes.

Oh, I'm a bad parent for teaching my children to respect people. OK.
I live in Los Angeles county, why don't you just put your money where
your mouth is and call up the LA County Department of Social Services
and explain that I'm endangering my children by teaching them to
respect people. Indeed!!

>It's this stupid "As long as it doesn't effect me"
>attitude that hurts society. Everyone waits for someone else to do the
>work for them or have things handed to them because they are
>"entitled" to it. Nobaody wants to take responsibility for their
>actions. Hell, even the gays try to do it by saying they were born
>that wayand have no controll over it, to place the blame for their
>shamefull acts on somone or something other than themselves.

What *are* you talking about? Do you think I'm stupid to respect
people and teach my children to respect people? I'd rather be
stupid than the alternative - which looks more like malice to me.
Perhaps you don't take responsibility for your actions, but I do and
I'm teaching my kids they must also. What entitlements have I claimed?
What am I waiting for to be handed to me? Good grief, Rob, I say
"respect people" and you launch into an attack on my character.

>Will you teach your children that respect means that if a friend of
>theirs is doing drugs, not to worry about it as long as it does not
>directly effect them? Or are you going to teach them to be a true
>friend by strengthening their friends by pointing out their weak ponts
>and getting them help? Are you going to teach them not to vote when
>others will probably vote and they don't need to, or feel their vote
>counts? See my point here? I am not critisizing you as a parent, I do
>not know you and for all I know you may be a wonderful parent. But to
>assert that leaving an issue alone it will go away, and by not dealing
>with issues of character and moral value will make problems correct
>themselves is absurd.

You've already criticized me as a parent, Mr. Neff - read your own words. I'm not even going to respond to your provocative jabs other than to say that I'm making every effort for my children to learn what is healthy and what is not, for them to grow up equipped to make their own decisions. I'm teaching them they are not compelled to "run with the crowd". I'm teaching them to be accountable for their actions. You somehow think my value of respecting the personal choices of other people is 'wrong', and this makes me question your ability to see the difference between right and wrong. If you need to condemn and ridicule me, feel free. I'm comfortable with my values on Judgement Day.

>I nor anyone else need 'come up' with elaborate 'reasons' for why this
>type of activity is bad. Its right there in front of your faces
>people.
>
>My universe is the same as yours. Because I choose to see the
>difference between what is right and wrong here, and speak out about
>it does not narrow the scope my reality and our universe. To say
>someone is closed minded implies that one is not interested in facts
>reason or argument concerning any specific subject. Since this issue
>is about an unacceptable, deviant, unsafe, and immoral behavior it
>does not apply. There will be no convincing evidence that
>homosexuality is a behavior to be tolerated, as much so the behavior
>of child molesters/pedophiles, murderers and theives. And yes they
>equate with the exception of the murderers.

Well, I don't think you are interested in fact, reason or argument on the subject of tolerance. You're therefore close minded. Shoot, you're not even interested in the facts, reason or argument on the subject of personal choice. You seem to think you can make the choices for other people. Where did you learn this?

Well, guys, that was my (not too well stated) point. The old rigs are
often rocked for right in the middle of the satellite sub-band or some
other competing use. No point in crashing a band plan, even if it is
"informal" (especially when there's room elsewhere).

I was just curious whether, like on HF, there is a spot in the weak signal
part of the band where those who still have a warm spot in their
hearts for these "lightweight" boatanchors hang out. Too bad weak signal
work seems to have largely gone by the boards. 2M AM/SSB/CW DX'ing can be
a LOT of fun.

: Yeah, 7.290 or 7.295 Mhz AM! I'm not trying to be a smart ass, but you
: never asked for a 2 meter frequency, only what frequency that operators
: of such gear hang out.

: Even the activity on 2 meter SSB in my area (Philadelphia) is next to
: none, so forget about AM. Years ago they used the portion between 144.10
: to 146 before the 2 meter FM repeater sub-band was established. Now all
: you hear is FM on frequencies above 144.30 or so. The SSB calling
: frequency is 144.20, and any activity that happens to be on SSB is
: between 144.1 and 144.30.

: The band plan says nothing about AM operation, although it is still
: allowed. The band plan mentions SSB, Oscar, FM repeater and Packet
: modes, but no AM. The portion between 145.50 and 145.80 simply says,
: "Miscellaneous and expiremental modes", so I would assume that if you
: wanted to stick to the ARRL band plan, you are better off there.

: There used to be a few old timers around here that had an AM net on
: 145.80, but I haven't heard them on for years. A couple of friends of
: mine had old Heathkit "Lunchboxes" that they bought from a hamfest. They
: came with 145.50 crystals. Those radios had super-regenerative receivers
: that picked up just about everything at once, so if you were pretty
: close it didn't matter what transmit crystal you had plugged in! Sorry I
: can't help more. If there is indeed activity around the country on 2
: meter AM, it is probably pretty localized and depends on what crystals

: were popular in that particular area 30 or more years ago.

Tauzin: Toughen Eavesdropping Law

By JEANNINE AVERSA
Associated Press Writer
WASHINGTON (AP) -- All it took was a minute, a two-inch piece of wire and a soldering gun for Rep. Billy Tauzin to convert a legal radio scanner into one that picks up cellular phone calls.
Most experts agree it's illegal to do this but enforcement is difficult.
Tauzin, R-La., chairman of the House Commerce Committee's telecommunications subcommittee, who rigged the scanner at a hearing Wednesday, is considering legislation to toughen laws against altering listening equipment.
Cellular telephone intercepts by scanner caught the public eye after a Florida couple using a police scanner taped a conference call among Republican leaders, one on a cell phone, discussing House Speaker Newt Gingrich's ethics case. Parts of the tape were subsequently printed in The New York Times.
Of 10 million legal scanners sold in the United States, it's estimated that a ``few hundred thousand'' have been modified to pick up cellular frequencies, testified Bob Grove, whose North Carolina company offers such alteration services. New digital cellular technology is supposed to make such eavesdropping more difficult.
Tauzin used the off-the-shelf police scanner he altered to pick up a conversation between willing participants, Rep. Edward Markey, D-Mass., on a cellular phone and Rep. Anna Eshoo, D-Calif., on a regular phone.
Grove insists he operates within the bounds of the law. Markey, who wrote a 1992 law designed to protect cellular callers' privacy, disagreed.
``It's illegal to modify,'' Markey declared, vowing to rewrite the law to clearly block the sale of modified devices.
Markey's law, which took effect in 1994, made illegal the import, manufacture and sale in the United States of scanners that work on cellular frequencies. It also required that new scanners cannot be ``readily altered'' to pick up cellular calls.
Information to turn police scanners into cellular scanners is available on the Internet and in some magazines, Tauzin said.
``The law and its enforcement have been inadequate,'' testified Thomas Wheeler, president of the Cellular Telecommunications Industry Association, representing cellular companies.
Wheeler, who helped Tauzin demonstrate how easily legal scanners

can be modified, asked for tougher laws to cover new technologies.
``It is time for the electronic stalkers ... to stop thumbing their nose at the Congress and trampling on individuals' rights,'' he said.
``There are laws on the books protecting the privacy of these calls,'' Tauzin said, ``but apparently they may not be working the way Congress intended,''
In an interview with The Associated Press, Grove said his company, Grove Enterprises Inc., operates legally because it neither sells nor markets altered scanners.
``There is no caveat, no direct prohibition against modifying those scanners,'' Grove said.
While those precise words are not used in the law or regulations, communications attorneys say companies or individuals that modify scanners to pick up cellular signals are violating federal provisions.
In general, it violates federal law to intercept a cellular telephone conversation and pass on the contents to another party. The exceptions: when police obtain court orders to use wiretaps in monitoring suspected criminals and when one party to a conversation has given permission. Many states don't allow eavesdropping based on such consent agreements.

>100.1247660636 cm cable that is 428 1282.400 full wave lengths.
>
>Whew! I'm I way off here? Thank you. - Chris N8UDK

Hello Chris,

The length of the cable ONLY matters when:
1. the impedance of the load differs from the characteristic impedance
of the cable, and/or:
2. the impedance of the source differs from the characteristic
impedance, and/or:
3. the cable is an unwanted part of the antenna system.

To eliminate possibility 3 from the list, you can put a ferrite bead
over the outside of your cable at both ends.

By the way, the wavelength INSIDE a coaxial cable is about 0.66667 x
the wavelength OUTSIDE a coaxial cable (if a common type of cable is
used).

Match the impedance of your in- and outputs and eliminate currents
over the outside of your cable screen, and your problems will be
solved.

Good luck

The Alinco DJ-S41T, right? ;)

I've got one. (Just for those who don't know, it's a little bigger that some of those nice digital pagers and costs about $140. It's only for 440, btw.)

I am very pleased with mine. That 1/3 watt really seems to get out. I have talked with mine inside the cab of my pickup to the local repeater with NO problems. I would very much recommend it (if you don't need 2m).

(Also, apparently on 440, you don't need as much power as on 2m, but I'm not too familiar with why.)

Where did I GET this information? I got it from THEIR DAMN WEBSITE!
Check it out yourself, Mr. Legal Eagle, at http://206.100.228.200/arg/

>I ADMONISH EVERY AMATEUR TO DISREGARD ANYTHING THIS KID >POSTS,

I'm a "kid", huh? At 32, I take that as a high complement :-) What are
you, then? A jealous old man?

> AND EITHER LISTEN FOR YOURSELF TO UNDERSTAND WHAT IS GOING >ON, CHECK
INTO THE FREQUENCY (THE GROUP THERE WILL HELP YOU >OUT..."DREW" CAN'T DO
IT BECAUSE HE IS ONLY A TECH PLUS)

Last time I checked, no license whatsoever was required to own a receiver
and monitor ANY particular frequency. I fully admit I don't have the
"privilege" of being able to transmit there, now would I want to. Why in
the world would I want to spend the time & money to upgrade and become
part of this mess?

>OR ASK SOMEBODY WHO HAS BEEN AROUND HAM RADIO FOR MORE >THAN A YEAR. IF
YOU SUPPORT THIS KID, YOU ARE ENCOURAGING
>THIS KIND OF BEHAVIOR, WHERE BASELESS ACCUSATIONS ARE MADE >AGAINST
INNOCENT HAMS, SOME OF WHOM HAVE NEVER EVEN >*HEARD* OF 3894.5, MUCH LESS
EVER HANG OUT THERE!

I'll repeat it one more time for you...the information in the previous
post was TAKEN DIRECTLY FROM THEIR WEBSITE AT http://206.100.228.200/arg/
If you have a problem with the information presented there, I suggest you
take it up with the author(s) of the Web page. I have no connection
whatsoever with ANYONE on 3984.5; I am merely an interested observer who
has been listening to the transmissions on said frequency for the past few
evenings, and I have never made any claims otherwise.

Now, lets talk about the accusations you made earlier that I engaged in
"libel" and "illegal activities." That's pretty strong stuff, to accuse
someone of engaging in illegal activities. What illegal activities have I
engaged in?

(Spam filter: Please remove .henry in address to reply)

I'm getting a used Tempo S1 HT but the battery pack is said to be
dead. I'm wondering if Henry Radio still supports this little rig,
so if you've got an 800 number or email address for them please
let me know.

Thanks in advance!
Jeff KH2PZ (remove .henry in address to reply)

Hello--

I have a book coming out in a few months that will be of interest to the radio community, and I am trying to obtain the names and addresses of people that would be interested in reviewing it in radio magazines, club publications, and etc.

Here's some pre-publication info:

_____
ACCESS TO THE AIRWAVES: MY FIGHT FOR FREE RADIO
by Allan H. Weiner (as told to Anita Louise McCormick)

Ever since he was in high school, Allan H. Weiner has been seeking access to the airwaves. The free radio stations he ran and his many confrontations with the FCC has kept his name in the news for nearly three decades.
But while the FCC might be able to block him from geting a license to broadcast, the government certainly doesn't control the publishing industry--at least not yet! Thus Allan's story, "Access to the Airwaves: My Fight For Free Radio" is sheduled to appear on the market in early 1997.
The publisher of this free radio saga, Loompanics Unlimited, is pleased to extend their range of "the most unusual books in the world" into the field of pirate radio.
"Access to the Airwaves: My Fight For Free Radio" tells the story of Allan's life from his early interest in electronics, first attempts to get on the air, the pirate stations he built and operated out of the basement of his parents' house in Yonkers, NY, college and legal AM/FM stations in Maine, and of course--his adventures in offshore radio with Radio Newyork International (1987/1988) and Radio Newyork International's run on WWCR and WRNO.
This book tells what motivated Allan to keep putting stations on the air and fighting for his constitutional right to broadcast--despite the FCC's best efforts to silence him. And you'll learn about all the behind-the-scenes events you haven't read anywhere else.
"Access to the Airwaves: My Fight For Free Radio" is 250 pages long and is illustrated with numerous photos of Allan and friends running radio stations, free radio QSLs and etc.

Hey, Burr...what seems to be YOUR problem?????????????

I find Drew's observations very interesting, since he isn't actually involved
in the activities of 3894.5. He is an "outsider looking in", and I value his opinion.

Now as far as you, Mr. Grammer Freak...I've spotted a few errors in your posts. I always find that people who can't put together a constructive debate, resort to "nit-picking" behavior. (i.e. pointing out spelling errors,
mistakes in grammer, etc.) Although I'm a professional writer, I make mistakes. That's why editors were invented. Drew IS NOT a professional writer and therefore, is not held to such criticism.

Now, Mr. Burr....are you a professional writer??? Teacher???
I thought not!!!!

So shut the hell up!!!!!!!!!!

73, and have a very nice day....

Fred

>>"Also worth mentioning...and this is my personal favorite...a catchy
>>little polka tune entitled "The Stump-Jumper Song" was played
>>repeatedly. Couldn't catch all the words (due to jamming attempts), but
>>it mentions Big Al and amateur radio...and the chourus goes "Everybody
>>sing along with the stump-jumper song."

>The lyrics are quite catchy. I do not condone the playing of the tape,
>but I do like the song. It goes something like this:

>StumpJumpers are here today
>Stumpjumpers are here to stay
>On amatuer radio...
>Big Al, he's the one to call
>Big Al, he's the one to call
>Everybody sing along
>The StumpJumper Song...
>...and so on and so forth.

Someone was doing a variation on the lyrics last night, singing "Big Al, he's the one to call when you need some more grain alcohol!" Obviously, Part 97 has a big problem with them playing it on the radio, but it IS funny stuff! <g>

>There has been a report that the tapes Preacher John cut were stolen.
>No one knows who did it, but he doesn't have them any more. In fact, he
>had to cut some new songs due to the loss of the tapes. It is rumored
>that the Opposition (WB2OTK, Rich Whitten - aka PortButt, et.al.) had
>something to do with the disappearance of the tapes, but that is
>unsubstantiated and not the opinion of this writer. One other person's
>opinion was that a PorkButt Suck-Up was playing the songs either stolen
>or recorded from the air to make the StumpJumpers look like a band of
>ragged illegals. I don't have any idea what is going on, but that song
>is also played on other frequencies across the nation. It truly is
>amazing. I wonder if John will be up for a Grammy this year.

Hey, get me a clean version and I'll play it on my (commercial) radio show! <g>

>As an
>unrelated development, Rich/PorkButt has decided to also sing along,
>clearly in violation of Part 97, with disgusting changes in the lyrics,
>substituting StumpJumpers with ButtHumpers. He is a very tiresome
>person.

I haven't heard this version...yet. I'm sure I will soon, though. Got the Sangean fired up again tonight :-)

Source record: 205392

>AGAIN, you show your intellectual deficiency, whgich has and will
>continue to get you into trouble. The information from the ARG website
>is NOT a "guide to the animals in the zoo (3894.5)" Where did you get
>the idea that this was the list of people on that frequency?

Where did YOU get the idea that I said all members of ARG are "animals in the zoo?" I never said anything of the sort. A subject line does not constitute a declaration of this. Immediately preceeding the list of amateurs is...that's right...the heading "ARG RADIO GROUP."

>They talk about the ARG on that frequency, but that is not the group on
3894.5.

Then explain to me how it is that SEVERAL...not ALL, but SEVERAL of the individuals on the ARG list have had their amateur radio transmissions enter my receiver over the past few evenings as it has been tuned to 3894.5Khz?

>I maintain that a great many of these people never show up on this
>frequency. That can be proven.

How do you know this? Do you listen? Have you been listening the past few nights? Obviously not, otherwise you would KNOW that SEVERAL...again, not ALL, Mr. Legal Eagle, but SEVERAL of these individuals HAVE been transmitting on this frequency over the past few evenings.

>You are a pathetic individual, livid when people accuse you of libel and
>defamation of character, (all true and can be witnessed daily)

Yes, I do have a problem when people accuse me of libel and engaging in illegal activities. I have asked you repeatedly to show proof of this, but have received none.

>but happy to do it to others every day. I offered via private E-mail to
>help you and instead you continue to smear the names and calls of
>innocent hams all over the net.

I'm not "smearing" anyone. Initially, I had a few callsigns incorrect. Off by a letter or two. Even when someone GIVES their callsign on 3894.5 (an uncommon event), it's rather difficult to copy 100% when a multitude of other stations are jamming and causing interference to the station I am attempting to hear. That's not "smearing", "libel" or "engaging in illegal behavior."

>I have had three e-mails from people telling me what an asshole you are
>(because they read your semi-literate postings on other subjects) and to
give it >up.

What a coincidence! I am getting the same sort of e-mail about you.

>I was hoping that maybe you were just someone who was mistaken, with no
>particular malice in his heart, but you are obviously a dipshit of the
first order >and I will leave it to the list of 14 hams whose calls you
have erroneously used >to deal with you.

Malice? Oh, please! I think you're gonna have a rather difficult time
proving malice. I'll say this once more to you...and for the benefit of
the others who have been reading this ongoing diatribe...I have absolutely
no interest whatsoever in this matter, except as a casual observer who
happened to turn his world band receiver to 3894.5Khz and decided to
comment on the...uh, rather unusual amateur operating procedures I heard
being practiced there. I have never transmitted on this frequency; I do
not know any of the participants on this frequency, and I have nothing
personal against anyone on this frequency. In fact, to tell you the
truth, I really have no opinion one way or the other concerning the
operating practices on this frequency. Actually, it's rather entertaining
to listen to, once you become familiar with the participants and
their...uh, shall we say, "proclivities."

>Go back to CB where you belong.

Cheap shot, old man, and totally irrelevant to the discussion here.

>No matter what happens
>with the hams in question, at a minimum, HF will not be a welcome place
>for you even if you study hard and manage that big 13 wpm.

I'm not real concerned about that. I have absolutely no interest in
gaining the "privilege" to transmit on this frequency. But I do like to
listen. That is my right. It is also my right to comment publicly on
what I hear on this frequency via Usenet and this newsgroup. I must say
that I don't care much for your implicit threats of action against me for
"libel", "illegal behavior", or whatever else you think you may have
grounds for. Totally baseless and without merit. Nonsense, in other
words. In the interest of all who frequent this newsgroup and are getting
tired of having to read this stuff several times a day, I propose we end
this discussion now and close this subject.

>beyond that.

I see, the foundation of your objection to LARC is your belief that
"homosexual" directly implies "homosexual sex". I suppose you don't
have any room in your narrow universe for celibate homosexuals? Do
you condemn them, too?

As for the "YL club crap", YL implies _grouping by social interest_.
I believe that LARC offers a different _grouping by social interest_.

I'm just not omniscient enough to pass judgement on people, so
I don't. I don't go to clubs that I don't have a common social
interest with, nor do I construct elaborate arguments against them.

You seem to believe all gay people are constantly seeking sex partners.
Of the several homosexual people I've known, not a single one
acted this way, and, interestingly enough, not a single one of them
condemned me for being heterosexual. I'm not some screaming
liberal; I'm just a person that values interpersonal respect. I'm
even teaching my three children the same kind of respect - does
that make me a bad parent?

Generally, these export restrictions are a result of encryption
technology being embedded within the product.

Strong encryption software is considered as a munition, and so it is a
serious crime to export encryption software. (Regardless of the fact
that strong encryption software, such as PGP, is freely available
throughout the world.)

>
> Could your PTT be locked? check your settings.

NOPE....not locked......I was on the phone with yaesu for about 30mins
today trying to figure it out......I mailed it in to them to repair..
Didnt tell them the cell mod was done, just that I got it for a christ-
mas present and it suddenly stopped transmitting........If they can
get it back to normal I'll leave well enough alone!! :) Like I said
the mod worked perfectly but I must have either accidently powered it
on the incorrect way or something..... normally when you change settings
via the knob and go to the menu.. you normally would push the ptt to
save & confirm the setting, well it wouldnt even do that.. The ptt
didnt work at all........We'll see....Like I said I fedexed it today..
hopefully I'll have it back in a few weeks in working order!!!

Thanks for the post..

MARK

I beg to differ. A more sensible way of looking at it would be to measure the *proportion* of licensed amateurs each year who are RSGB members. The number of amateurs in the UK is still *increasing* (apart from a small blip about 3 years ago), whilst the number of RSGB members is falling. That paints an even worse picture of the RSGB's record in attracting members in recent years!

I really do not like gay people but that is my hangup.
There is no need to knock them because they cannot help the way they
are.
But I respect them more than hams.

Did I ever say ALL hams.
If so I merely meant MOST.

Unfortunately you will most likely get a nice note telling you that you
have voided your warranty. The mod is probably the first thing they will
look for and in the unlikely event they do just fix it, they will be
required to undo the mod when they send it back to you.

Dana Myers <myers@West.Sun.COM> wrote:

>As for the "YL club crap", YL implies _grouping by social interest_.
>I believe that LARC offers a different _grouping by social interest_.

YL clubs are not the same. In fact, I've been actively proposing the
idea of starting a "YL auxiliary" for a local club that I am a member of.
See, we (the guys) have our meetings on Friday night. I figure if we
have an Auxiliary and they meet Saturday morning, the women can clean
up for us and keep the place looking good in the AM for our next Friday
meeting.

>I'm just not omniscient enough to pass judgement on people, so
>I don't. I don't go to clubs that I don't have a common social
>interest with, nor do I construct elaborate arguments against them.

Personally, I could care less if someone is gay ham or not.

ObCWPlug/ObSterotype: I would think that gay hams would love CW. After all,
you can't tell if someone has a lisp over CW!

>Of the several homosexual people I've known, not a single one
>acted this way, and, interestingly enough, not a single one of them
>condemned me for being heterosexual.

Its unfortunate, yes, however many groups are tainted by the
reputation of the most vocal or radical elements of their particular
social strata. People concerned about the environment, for instance,
are painted with the "Earth First!" radical brush. Republicans are
referred to as Jesse Helms. Democrats as Teddy Kennedy.

Unfortunately for the gay community, they are tainted by the actions
of groups like ACT-UP! If the gay community doesn't want to be painted
with this brush, then they need to educate people via other social
groups as to what the gay community is >really< about.

>anyone answer the following (not clear in users manual):
>
>1) To run ASFK (instead of FSK) does one have to use the LSB mode rather
>than the RTTY mode? (Pactor 2 uses PSK not FSK).

Yeah, the RTTY mode is true FSK. For anything else you have to use
LSB mode.

>2) Are the optional 500hz and 350hz filters accesible from the LSB mode?

Not normally, but there's a sneaky way to make it work. If you have the
500 Hz filter installed in the optional filter socket, tell the radio
you have the optional narrow SSB filter installed intead (on the intitial
set menu) and it will let you use it in LSB. Use IF shift to position it
properly. There's *just* enough range on IF shift to move it over where
it is needed. Of course now the radio won't let you use the narrow filter
in RTTY or CW mode, so if you want to run RTTY or CW, you've got to go back
to the initial set menu and tell it the truth before it'll let you use it
as intended. Note, LSB transmission is always through the normal SSB filter,
so this doesn't screw anything up.

I wish Icom had let the radio be toggled between FSK and AFSK in the
RTTY mode. That would have been more convienent, and let you use the
really slow tuning available only in RTTY mode. But at least you can
trick it into letting you use the narrow filter.

>3) The users manual is a little coy about permissable duty cycle when
>running 100% duty cycle modes such as regular RTTY - anyone know what the
>limits are?

I run a maximum of 50 watts when running data modes, more often less.
The radio doesn't seem to mind. I don't run much straight RTTY though,
mostly Clover or PACTOR I. Clover has to use the LSB mode, but I do
PACTOR in RTTY mode (just to be contrary I guess). I'd really like to
use the slower tuning for Clover, but the radio wasn't built that way.

Indeed. Considering only about 0.1% of the US population has any idea
of Morse Code, think carefully about who are the fringe loonies on this
issue.

HA! Just for grins, this weekend I pulled out the old homebrew
Hoff design TU, hooked it to the old homebrew TV typewriter,
dug out the old homebrew 6L6 transmitter, and did a quick conversion
of my I/Q receiver to make it a straight DC receiver (unhooked the
DSP board and added an audio amp to the in-phase channel), and
worked some 110 baud ASCII RTTY. Read the text and interpreted
it with my brain, no commercially-built hardware needed. Phfffffft!

2923. Any Inside Scoop on Vanity Callsigns?

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-05 00:00:00 UTC
From: Al Gerheim <gerheim@sonalysts.com>
Message-ID: <32F897EE.4E8@sonalysts.com>
Source record: 205412

Everyone predicted the vanity callsign program would be in
action again on February 1. I've been checking the "dailies"
at the fcc ftp site (ftp://ftp.fcc.gov/pub/XFS_AlphaTest/amateur)

They're just showing a couple of vanity actions, and these
are probably actions for family members.

Anyone have any updates to report?

David,
push KNOB & MON then power on then immediately hit your FW key which is
the Function button......

That does a CPU master reset....

Actually he's breathing more nitrogen than oxygen. In any case I tend to
agree with your assesment my emperor.

Sincerely,
Darth Vader - who get's to wear the coolest costume.

There is anybody who knows any tricks about that transceiver?
Well I would like to know if is possible to transmit at 70 Cm Band with
that one. And if is possible to get more features with secret
combination of keys, like the air band with the F and Low keys.
My e-mail is: amatias@batch-pc if anybody needs anything from me.
Thanks and best regards.

The best way to handel that is take your huge speakers with the 13 inch CV's in them and turn them around facing the wall that they live behind (provided it's an apartment) and set your timer for one hour after you leave, crank up that bad boy, get some really offensive rap CD from Death Row and set it to go off just before you get home from work and that should take care of that! :)

Hi and thanks for reading;
Does anyone have any alignment tips for the TEK900. The local shop wants $69.00/Hr for alignment!.
I have a TEK900 set for 441.1Mhz. I have injected a 3Khz tone and successfully received it on another FM received. So I think the Tx is OK. However, the Rx is where I have trouble. Will the reverse work?

I have recent access to a FM modulator that can generate toe on FM with varying bandwidth and modulation. I do not have a Spectrum analyzer. So I'm hoping someone with a little experience can tell me if listening on a Radio, while watching a Scope for amplitude would suffice?

Feedback welcome, Gabe Nemeth VE3SLJ.

I see similarities to Berkley SPICE the popular analog
circuit simulator that evolved from the CANCER program at
UC Berkeley to MININEC and NEC code.

It is unfortunte that many EE college programs are moving more
toward computer programming and away from circuit analaysis and
electromagnetics.

Clearly, the the most universal language in the world is double entry
bookkeeping. The debit is on the left and the credit is on the right.
However, it's the interface that counts, isn't it? Heck of a lot
simpler concept than NEC or MINENEC and folks pay a lot more money,
in total, over the interpretation of that simplisic Phonecian idea than
all of these very worthwhile folks will *EVER* make out of their hard
work......

bless their hearts....

Oh, I read your note all right. Since the discussion isn't about the dangers of anal sex, your note wasn't worthy of response. The discussion is about the validity of a gay amateur radio club, not gay sex. Anal sex, whether practiced by heterosexuals or homosexuals, is apparently pretty risky. What's your point? Anal sex is risky? Sure. What the heck does that have to do with amateur radio?

>Strange how "mother nature" (Noticed I didn't say GOD!) teaches us when

I'm in EM79 (Cincinnati area) and 6 meters is not exactly oversubcribed, but there is some activity on SSB around 50.125 - 50.160 most nights. You'll need a horizontally polarized antenna at least 35' off the ground to hear much, though. Hill-top locations are the sure cure for not hearing much.

I have a big antenna on a really tall tower and can easily scare up some activity any evening that I try. Chicago, Detroit, Nashville, Pittsburg, Cleveland, Erie, ... that sort of thing. You should look for activity in Dayton and Cincinnati with a horizontal beam and you will find it. Try calling CQ on SSB on 50.125.

See U there!

>two meter antennas.

Antenna restrictions are a part of the problem. And they are a bigger
part of the problem for the average HF operator than for the average
VHF operator (EME and other weak signal types excepted). This needs
to be addressed aggressively. But still, lots of people have gotten
by with limited antennas on HF for years. It takes a bit of ingenuity,
and you won't be the killer Big Gun on the band, but you can operate.
If nothing else, you can put the rig in the car and operate mobile
or portable.

And if you use advanced digital modes, you don't need lots of power
or big obtrusive antennas to be effective. This still seems to be a
secret not known by a majority of current amateurs. You can substitute
the power of good signal design and coding for the brute force methods
in current use by the majority. Only a relative few of us are taking
advantage of that power now, but all amateurs could. We could even do
highly effective digital voice with some changes to the absurd regulations
which currently balkanize and limit HF activities to only traditional
methods.

>The decreasing amount of amateurs on the HF bands has many causes.
>
>1. Repeaters(personally I avoid them) - It's real easy to keep in touch

>There is no desire to spend alot on HF equipment, when your $200 radio

>shack handi talkie works fine for you.

It's true, a lot of amateurs are satisfied with reliable local communications. All of amateur radio isn't about working Dx. If HF doesn't offer them something they want, they won't bother with it. But HF has the potential to offer much more than what has traditionally been done there. We need to aggressively push to exploit that potential. HF may never again be the mainstay of amateur radio. That baton may have passed permanently to VHF+. but there is still much which can be accomplished only at HF. It uniquely offers low latency long distance communications opportunities which we don't find anywhere else in the spectrum.

>2. Economy - That was kind of touched on with repeaters. Homebrewing

>You always see these radios going home. Most of their owners don't
>particularly care whether they sell or not. Face it, this hobby is
>getting more and more expensive. You have to be a professional to
>really get into this hobby.

This is a serious misconception. It has never been cheaper to be an amateur than it is today. Even new equipment is cheaper than comparable equipment of 30 years ago after you factor in inflation, IE calculate the cost in man-hours you have to work to purchase it rather than just looking at the dollar figures. In the 60s, a kid got 50 cents an hour at McDonalds, today McDonalds is offering $6.45 an hour, and jobs go begging to be filled. Similarly for adult employment, a good job paid $250 a week in the 60s, today it pays over $1,000 a week. A Galaxy V Mk II cost $495 in 1967. An IC-706 costs $1145 today, and the IC-706 is a much better radio than the old Galaxy. Or consider a $200 HW-32 monobander to a $645 TenTec Scout of today. Salaries have at least quadrupled, and in the case of youth, have gone up 12x, but prices have only doubled or tripled. So the rigs are cheaper today in real terms than ever before.

And there are plenty of cheap older radios available. A TS-520 can still be found for $250, even a pair of Drake Twins can still be found for $450. Those are good values. The very excellent IC-735 can be found on the used lists for $600, and that's still very competitive with a new radio (and cheaper even in straight dollar terms than a KWM-2 was new). You have to shop a bit, but you can find good radios for low prices. They may not have the latest bells and whistles, but they are still perfectly functional HF radios.

And lord knows it has never been a better time to be a homebrewer than today. The proliferation of cheap VLSI components means you can make a very competitive radio at home for very little money. My little I/Q receiver, with full DSP, cost me around $100 to build.

I couldn't even have built a receiver of that caliber in the 1960s
no matter how much money or time I was willing to spend on it. If
you want to build Olde Tyme radios, you're in a world of hurt, because
the old timey parts aren't available anymore except at the bottom of
the deepest junkboxes. But if you want to build modern SOTA equipment,
you certainly can, and it is *easy* thanks to high integration VLSI.

>3. Code requirements - This is really an overstated excuse for someone
>not being on HF. Really code can be usefull on all bands. I'm slowly
>learning code to help with with weak signal work on the vhf+ bands. I
>really have no interest in HF.

I think this is a more important factor than you credit. It is mostly
a psychological factor, IE a matter of perception, than anything else.
But as any salesman will tell you, perception is more important than
reality in closing the deal. Most technically inclined people today
see Morse as an anachronism. And that colors their perception of all
of amateur radio as long as it remains the most prominent licensing
factor for everything above entry level. That has created a culture
which isn't inviting to potential entrants to amateur radio today.

>4. There's more to ham radio than HF - The interests in amateur radio
>are really spread out and varied now. There's packet, satellites,
>repeaters, weak-signal, eme, microwaves, etc... Everything seems to
>have been done already on HF. The contacts have been made all over the
>world. All that's needed on HF is an active station in that country
>and you've made contact. We are still pioneers, albeit small pioneers.
>There's still new things to do on the bands above 50mhz. Heck, there
>still hasn't been a contact from Arizona to Hawaii(I think it might
>be possible).

Well, if you take a traditional view of HF operating, what you say
is true. There is very little to be accomplished which hasn't been
done over and over again by others. That does reduce its appeal. But
if you take a less traditional approach, there is much of interest
left to do on HF. In particular, exploring advanced digital techniques
to combat the impairments of the HF channel. That's a fascinating
area to explore, and new ground can still be broken there (much more
could be done with some changes in our antiquated rules, but there
are still useful areas to explore even under current rules).

This is something which can't be done the same way at VHF+ because
the channel is very different. HF is not primarily a gaussian channel,
and different techniques are needed to deal with its impairments than
those needed at VHF+. Industry has well plowed the gaussian channel
problem, and little remains to be accomplished which is new there.
But the HF channel is a different animal. Amateurs still have a chance
to lead in this area. And it is table top science, cottage industry,
because most of the radio development of the future will be software
based, and that's the ultimate cottage industry, done with a contemplative
mind and a PC. Anyone can afford to participate, and can be competitive
with the largest R&D outfit, because the activity boils down to a fellow

with an idea sitting in a cubicle facing a PC for them too.

> Maybe loosening code requirements is enough to get hams into HF.
>Maybe just one code speed requirement and then technical testing
>to advance through HF will help. Maybe opening up an area of HF
>to no-code tech's will wet their appetite for more.

Couldn't hurt. And I'd suggest it would help even in the area of recruiting VHF+ operators because it would fundamentally change the perception of the entire amateur culture. Without the albatross of Morse testing as the dominant factor in amateur radio, the service gains the appearance of a much more contemporary and attractive activity.

>Maybe the next sunspot cycle will re-kindle interest in
>the HF bands.

Perhaps. But I wonder whether the types of traditional Dxing activities fostered by good propagation will still have an appeal to people accustomed to instant global communications via satellite TV and the internet. Traditional HF activities really do seem quaint to many people today. I think we have to build on the only unique factor amateur radio retains, and that's the ability to experiment. Amateurs are encouraged to learn new techniques and try out new ideas. That's what differentiates us from other services where operators are just users of sealed by law boxes.

>There's some thoughts and some "maybe"'s. If you want to re-populate
>the HF portion of our bands, you're going to have to market it to the
>rest of the amateur community, like you would market an old product.
>Somehow make it "NEW & IMPROVED".

And that applies to more than just HF. We have to put the sizzle back into the steak if we want to encourage people to come take a taste of it. I'm afraid that the traditional approaches don't work anymore. Of course there will be some who will say that they don't want more amateurs. They'll say the crowding is too extreme now. They want people to "work" to get in, but what they really mean is that they don't want any more people attracted to amateur radio (a few even express that openly). That attitude is the surest way to destroy amateur radio's future (especially given our current depressing demographics). We aren't using our spectrum efficiently now, we can accomodate large amounts of growth without harm, but too few of us have either the vision or the guts to try. It'd mean changes to the way *we* operate, and many amateurs seem afraid that they couldn't adapt or cope. But if amateur radio is to have a future, we *have* to take a leading position with regard to new methods and new strategies. It is one of the unique and critical purposes of the service.

We can no longer depend on amateur radio's role as a people to people ambassador of goodwill. Cheap air travel and instant

internet communications have totally eclipsed amateur radio in
that role. We still have a public service and emergency communications
role to fill, but we aren't unique in that role, all radio services
are charged to meet that need, and other services have supplanted us
in many areas and made our contribution much less prominent than in
times passed. (We could do much to rejuvenate our role here, but it
would require changes in the way we operate, and in the way we think
about communications systems, which would make "traditional" amateurs
uncomfortable. In other words, we need to foster cooperative systems
rather than competitive systems, and that's foreign to the traditional
amateur mindset.)

That leaves our roles as a technical training ground, IE a lifelong
learning laboratory, and as an experimental service pushing and defining
the SOTA in radio communications, as our primary justifications for
existence. Amateur radio is a unique service in that we are encouraged
to experiment, innovate, and learn by *doing*. Other radio services don't
even *permit* experimentation or innovation by their members. We can adopt
new methods, field trial new systems, and tinker with new concepts in ways
that no other radio service can. This is our strong suit, but too many of
us refuse to play to it, or even acknowledge it. Too many are content to
do things the way grandpappy did them. That wouldn't be so bad except too
many also want to prevent others from trying something different. Fear of
change, in a service which is supposed to be devoted to change, is the
greatest danger amateur radio faces today.

>dramatic conversion take place?

It began in earnest about 15 years ago when the technically inclined
populace first began to grasp that the future of communications is
digital. Today, most people are aware of the power of digital communications
systems in the wired arena, and expect the same power in the wireless
arena. Amateur radio cannot exist in a vacuum. It is part and parcel
of the communications world, like it or not, and it must retain relevance
to that world or it becomes a quaint backwater, like buggy whip manufacture,
which will quickly fade away.

It is perhaps possible that you could generate sufficient RFI to
interfere with the operation of their stereo (as well as every other
consumer electronic appliance within a wide radius), but besides being
illegal, it would be stupid. Either they, and the rest of your neighbors,
would come over and beat your butt, or they'd just add some simple RFI
suppressors to their stereo and turn it up louder.

It will be much better to deal with the problem in a legal fashion.
If you can't come to an amicable agreement with them, and they really
are playing the music so loud as to be a public nuisance, then file
a complaint with the local police for violation of the local noise
ordinances (almost every community has one). If for some reason your
community doesn't have a noise ordinance, file a civil suit directly.

If you don't wish to involve the law for some reason, then I suggest
you invest in a cheap pair of hearing protectors, available from any
industrial safety equipment supplier, or a shooting supplies outlet.

>This newsgroup is filling up with the scum of the earth! I am sickened
>by the behavior of you supposed smart people. What in earth does anal
>sex have to do with ham radio?

ABSOLUTELY NOTHING! That's the whole point we're trying to make to Lambda and their supporters who attempt to use amateur radio as a vehicle to promote the homosexual agenda and the resulting lifestyle of sodomy, perversion, and disease.

Ham radio is a great equalizer; behind the mike, nobody knows or cares about your race, religion, sexual preference, etc. Unfortunately, there are some misguided souls who are attempting to force the issue by identifying themselves as "gay hams", "lesbian hams", "transgendered hams", etc., and then attempting to force us to accept their abhorrent lifestyle choices via amateur radio.

AOR 3000A-PRICE REDUCED!!!

Nice all mode (AM, LSB, USB, CW, NFM, WFM) receiver covers 100 khz through 2036 mhz (cellular blocked). 400 channel scanning capacity, 50 channel per second scan and search as well. Other features include VFO tuning, 13 band pass filters, user selectable tuning rates from 50 hz through 999.95 khz, LCD clock and digital s-meter, just to name just a few. This unit has an RS-232 port for optional computer control (with the appropriate software). Includes original box, manual, power supply, whip antenna, and dc plug. I am a non-smoker and the unit is in excellent condition.

Asking $775.00 and I will ship this to your door anywhere in the continuous United States.

Thanks for reading this.

I would say there are only 2 reasons.

(1) absence of sunspots
(2) ease of world wide communications via the internet.

I personally don't give a fig about VHF except for the DX
Packet Cluster and backpacking emergency use. After 20
years of DX-ing, I'm at a standstill because of the poor
solar flux. My usual activities are to check the cluster
for new countries on 80 meters, then log on to the net.

>> IE Andre Marie Ampere, Alessandro Volta, Michael Faraday, Joseph
>> Henry, James Watt, etc.
>
>Charles the Second?

Unlike the case of the electrical units, it would be difficult to identify the person first associated with the measurement of time. The system is Babylonian base 60, but the name is from the Latin secundum, meaning the second division, IE the second is the second division by 60 of the hour. This belongs in the metric system only by adoption, since it is not base 10. The French tried to adopt the deciday, centiday, and milliday, but the idea flopped. Those old Babylonians had some powerful juju.

But the second is tied to the metric system in another way. It was originally the duration of the swing of a pendulum of one meter length in a one G field. And the metric ideas of millisecond and microsecond did catch on as subdivisions of the second. Kilosecond and megasecond found few supporters, however.

>Lovely Rita Meter Maid?

It would also be difficult to identify the person first associated with linear measure. The meter (metre) is derived from the Greek word metron, meaning to measure. The ancient Greek geometers are largely associated with the idea of linear measure, and in particular the measure of the circumference of the Earth on which the meter was originally based, so this is as close as one could come to an association with a person or group of persons for this unit.

>Senator Phil Gramm?

Bingo! The gram is based on the mass of Phil's brain. :-)

Not really. Gram comes from the Latin word gramma, meaning a small weight. Of course this is a misnomer because the gram is not a measure of weight, it is a measure of mass. The

gram is not even a fundamental unit in the SI system. The
fundamental, or base, units are the meter, the second, and
the *kilogram*. By rights, the kilogram should have its own
base name and not require a prefix. This is a major fault of
the SI naming system and should be remedied by an international
convention at the earliest opportunity. I modestly suggest we
rename the kilogram the gary in honor of the person who brought
this flaw to international attention.

>Gasp.
>
>You're right though, none of that high tech stuff would help a
>straight key... especially if your fist is as bad as mine...

Yeah, Bob, coherent CW is a big improvement, but it still suffers
because of the different dot and dash frequencies, IE you still
can't form an ideal matched filter for the channel because of the
different symbol timings (that costs you an average 2.39 db). You
can use integrate and dump, and that's a big win. But you've also
still got the problem that you're only transmitting energy for 40%
of the required coding information, and you've still got the problem
that the signal isn't antipodal in signal space. Combined, those two
latter factors cost you 6 db compared to a uniform code using an active
two state modulation.

: not one of them.

..

: Once again, I neither deserve nor want to take any credit whatsoever for
: MININEC or NEC, the underlying calculating engines of ELNEC and EZNEC. The
: people who developed these powerful tools earned and deserve full credit
: for them. I do take full credit, blame, and responsibility for the
: interfaces I've created.

..

: And please correct anyone who credits me for work I haven't done.

In no way would I minimize the value of the underlying NEC and MININEC
codes, but at the same time, if you use as a measure of contribution
the number of people who can actually successfully use those programs,
then I'd say that Roy's contributions with ELNEC and EZNEC are indeed
great, as are contributions of others who have undertaken similar tasks
with perhaps slightly different viewpoints on the human interface.
How many average hams would actually use NEC if they had to deal with
input decks and long tabular lists of output? I probably would not.

Thanks, Roy, for helping to make these valuable tools actually
accessible to the ham community. The cost per hour EZNEC has saved me
is mighty low.

SI and I have discussed this suggestion and we have good news and bad news. the Bad news is that SI is determined not to change the name to anything begining with G. The thinking here is that this might cause confusion with older cgs thinking. The good news is that SI is willing to name the unit of mass the KE4ZV in your honor.

My warmest congratulations.

And for only $100 the Registry of Stars^H^H^H^H Units will send you a document and another copy to the U.S. Library of Congress which will be protected by international copyright. This document will confirm your right to use this unit of measurement in any matter which you do not consider to be vital to the good standing of your professional reputation.

.....

I agree. If some people would use a simple rule of thumb which is don't say something on cellular or cordless that they would want someone else to hear. Use a corded phone or other secure method. I know that sometimes a person can't wait and must use a unsecure method of conversation. With that they should just grin and bear it because they know that they can be heard. Instead of whining to their mommies and daddies that someone can hear me on my phone.

Another thing that ticks me off about this subject is that some people that hear of this subject now think that everyone in the world has a scanner for one purpose and that is to listen to other peoples conversations. I hate to inform them but I know a bunch of people who are volunteer firemen and some policemen use scanners to assist their community. I, a volunteer firemen, use my scanner to listen for calles for my department.

So people WAKE UP and smell reality, use common sense when monkeying around cordless or cellular phones!!!

I am currently writing a manual to replace the old version of the Amateur Radio Operator's Handbook by Manuel Murillo Rivas (TI2-MMR), which is outdated and doesn't provide enough information for the exam which is administered currently in Costa Rica.

Does anybody have the Q, phonetic (including numbers), and morse codes which are currently being used? I am also looking for updated lists of country prefixes, and info on how they are assigned to those who solicit them (who you have to ask, what you have to do, etc).

Anybody?

As I sit here at my desk with the 'puter on one side and my trusty 'ol Sangean dialed up to 14.313 on the other, I'm hearing a new (and rather amusing) wrinkle. A station is transmitting...and as he transmits, he's being jammed by...I kid you not...a tape of a CHICKEN clucking! Everytime he keys up, the CHICKEN cluks along with him.

I take it this must have something to do with the war service record of the station being jammed (?) The "jammee" is now threatening legal action against the CHICKEN-JAMMER! <g>

Just when you think you've heard it all...

SB SPCL @ ARL $ARLX004
ARLX004 YLRL founder Ethel Smith, K4LMB, SK

ZCZC AX04
QST de W1AW
Special Bulletin 4 ARLX004
From ARRL Headquarters
Newington CT February 6, 1997
To all radio amateurs

SB SPCL ARL ARLX004
ARLX004 YLRL founder Ethel Smith, K4LMB, SK

Ethel Smith, K4LMB, of McLean, Virginia--who inspired and helped found the Young Ladies Radio League (YLRL)--died February 5. She was 79. In accordance with her wishes, no services are scheduled.

A ham for more than 60 years, Smith--a Wenatchee, Washington, native--discovered ''wireless'' as a youngster and became licensed as W7FWB in 1936. A story in QST for May 1940 outlines how Smith's letter to QST encouraged other female hams to form their own organization, which became the YLRL in October 1939 (with Ethel Smith as its first president). Her stints with the Army and Navy during World War II led to an offer from the Naval Research Laboratory in Washington, DC, in 1945 (she joined the Naval Reserve in 1950 and remained an active reservist for 10 years).

Smith also participated in the formation of the Foundation for Amateur Radio (FAR) in 1957. Around that same time, she met and married the late John ''Tex'' De Bardeleben, W4TE (ex-W3CN), who was with the FCC. The couple set up housekeeping in Virginia, and she later served as the Virginia SEC (1966-69) and as an ARRL Assistant Director under four different Roanoke Division directors. Last August, six months after her 79th birthday, she celebrated her six decades in Amateur Radio by passing the Extra Class examination.

In addition to being a member of ARRL, Ethel Smith was a member of QCWA, served as its executive secretary/general manager in 1974-75, and was elected to the QCWA board of directors. Her other recognitions include: Ham of the Year, Washington, DC, Mobile Radio Club (1965), ARRL Roanoke Division Service Award (1972), Dayton Hamvention Special Achievement Award (1984), QCWA Roll of Honor (1987), Radio Club of America Fellow (1988), and Foundation for Amateur Radio Ham of the Year (1993).

In an article in last fall's QCWA Journal celebrating Smith's 60 years in the hobby, she was quoted as saying: ''Amateur Radio is still the main focus of my life. It has brought me all the good things that ever happened to me. It gave me a challenging and rewarding career. It gave me a wonderful husband and the greatest collection of friends in the world--all over the world. I owe more to Amateur Radio than I can ever possibly repay.'' The quarterly featured a front-cover picture of Smith in her W7FWB shack.

ARRL Executive Vice President David Sumner, K1ZZ, expressed sorrow at Smith's passing, calling her ''a leading light in the ham community.'' Sumner said that Ethel Smith ''never stopped contributing, learning, and growing. I don't think it ever would have occurred to her that she should.''

>

The problem is, obviously, Drew's using people's calls out of context. As Drew now knows, several of the people listed in his posting NEVER are on that frequency. Most of the others are rule-abiding and far from "animals". Therefore, to put this list inder the heading of "3894.5 A Guide to the ANIMALS in the ZOO" is completely unfair.

Do you get it, now?

Let me give you another example that should be clear to all: I don't agree with EVERYTHING that is posted on this newsgroup, so I will post to every other newsgroup a posting entitled "rec.radio.amateur.misc: A guide to the DUMB SHITS on that newsgroup for LOSERS". I would then list all the names and callsigns of those posting here (including yours), even if they never did anything "wrong". What's more, I'd take some callsigns out of the callbook and post THEM just for the hell of it. That's essentially what Drew did. He meant no harm, so he says...he just didn't consider what he was doing to others.

If you don't *think*, it is so easy to trash people that you don't even know that are completely innocent. Any chicken shit can do it, and many do. But the tables turn as soon as these people think about THEMSELVES getting trashed! You may want to consider that the "joy" you get in dragging people through the mud will be more than offset by the pain of being the draggee. And that can happen in a heartbeat.

Just spelling them so Carl and his friends can read them, must have
worked, too.

Now as to the teacher (or he who possess proper English skills yet fails
to apply them to himself)....

Jim writes on various other posts...

I ain't a structures cat. (proper english?? I think not)

Ok, fellers (as in Cinder or Rocka??? or does you have a better ideaR)

kinds of (as opposed to kind of)

What is even more pathetic about Jim's post is that he fails to see when
he points his fingers there are several more attached to his hand that
are pointing back at his dumpy, pasty white bloated ham body..gee maybe
Burt is right after all!!

Get The point JIM???

Unfortunately we're not all as clever as you Gary. :+)

So how about publishing your design and encourage some homebrewing ?
It might even help to dismantle the myth that "the homebrewer can't
possibly compete with the Japanese rice boxes on performance or price".
Who knows, perhaps some of the more sceptical may find it easy and
become inspired, embracing the new technology instead of clinging to the
past ?.

SB QST @ ARL $ARLB006
ARLB006 Vanity call update

ZCZC AG06
QST de W1AW
ARRL Bulletin 6 ARLB006
From ARRL Headquarters
Newington CT February 6, 1997
To all radio amateurs

SB QST ARL ARLB006
ARLB006 Vanity call update

Vanity call sign processing apparently will remain on hold for a
while longer as the FCC's Gettysburg, Pennsylvania, office continues
to deal with a backlog of vanity applications that required special
handling--the so-called WIPS (work in process) stack. As of February
6, WIPS was backlogged to mid-November. An FCC spokesman said the
FCC will process vanity applications received in December, January
and February--in parts or all at once--after it has completed work
on the WIPS backlog. The FCC has not processed any vanity call sign
applications since mid-December, but some new call signs have
trickled out over the past several weeks as the FCC resolved issues
on WIPS applications. The last applications processed were received
by the FCC prior to December 1, 1996.

Although vanity Gate 2 opened in late September, the program remains
popular, and vanity call sign applications continue to pour into
Gettysburg office. During January, Gettysburg got 945 applications,
479 on paper and 466 filed electronically.

The FCC has not said when Gate 3 will open.

2985. W7EL, MININEC, and NEC

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-06 00:00:00 UTC
From: w7el@teleport.com
Message-ID: <5dbbgn$54$1@nadine.teleport.com>
Source record: 205279
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc

I recently corresponded with someone who felt I was taking credit for work which I hadn't done. He also said that he had heard me be credited for development of NEC-2. I'd like to take this opportunity to set the record straight.

I did not take any part in the development of either MININEC or any of the NEC codes (NEC-2, 3, or 4). MININEC was to my knowledge solely the work of two people, Jim Logan (N6BRF) and Jay Rockway, of the Naval Ocean Systems Center (now NRaD). The NEC codes were developed over a period of about 20 years by the government, and many people took part. Among the more recent contributors are G.J. Burke and A.J. Poggio. Both NEC and MININEC are incredibly powerful tools, written by very talented and capable people. I'm not one of them.

I took MININEC and NEC-2, both of which are in the public domain, and wrote interfaces to make them much easier to use. These are ELNEC and EZNEC, respectively. ELNEC and EZNEC include in their code parts of the original MININEC and NEC-2 programs, and these do the calculations. I've written every line of code in ELNEC and EZNEC -- except for the most vital parts, the calculating engines. Apparently my calling myself the developer of ELNEC and EZNEC has caused some misunderstanding about my contribution. I enforce my copyright on ELNEC and EZNEC although I of course have no claim whatsoever on the embedded portions of MININEC and NEC-2. Technically, ELNEC and EZNEC are "derivative works" which are protected by copyright.

(In ELNEC, I did modify MININEC somewhat to make it run faster, incorporate current sources, and fix a few bugs, but my contribution to its overall ability is minor.)

According to my email correspondent,

I have played with the NEC code myself, and have toyed with front and rear ends to it. Having programmed professionally myself, I recognize the complexity of the front and rear end code as something that any programmer could accomplish in a reasonable time.

This is probably true for a skilled professional programmer like the correspondent, but that's a category I don't include myself in. (My background is analog circuit design, not software development.) Certainly the interface doesn't require the mathematical skill and underlying knowledge of physics that the calculating engine does. In fact, very little real knowledge or skill was required to do the interface -- just lots of hard work and attention to detail. MININEC consists of about 1500 lines of code; ELNEC runs about 20,000, and it doesn't include all of MININEC. So the interface did take me a lot of time and effort. But its size certainly

isn't in proportion to its importance; neither ELNEC nor EZNEC would give a single answer without the included calculating engines. In fact, this is a testimony to the tremendous accomplishment of the MININEC authors.

In the past I've also designed oscilloscopes (actually, parts of oscilloscopes). Yet I had nothing to do with the development of the CRT. It can be reasonably argued that an oscilloscope (or a television, for that matter) is simply a "front end" for a CRT. The fact is that the end result -- the entire package -- has a value greater than that of the CRT alone. Apparently a number of people also feel this way about ELNEC and EZNEC (and similar programs by others), since they pay money for them while they could get the same answers from MININEC and NEC-2, both of which are free.

Once again, I neither deserve nor want to take any credit whatsoever for MININEC or NEC, the underlying calculating engines of ELNEC and EZNEC. The people who developed these powerful tools earned and deserve full credit for them. I do take full credit, blame, and responsibility for the interfaces I've created.

I'd appreciate any further circulation this could be given, on reflectors or lists dealing with antennas -- wherever a misunderstanding might have surfaced. And please correct anyone who credits me for work I haven't done. Thanks!

Roy Lewallen, W7EL

>IC-706 to see if it's the case.

Bummer. I guess I have a 'classic' 706. I was hoping that Icom was trying
to generate interest in AM. Hopefully the new rigs still have 6 meter AM.
When that band opens again you will hear me bleating on 50.4 Mhz AM. I will
have to use the Icom until I can get ahold of a Clegg Venus or other, more
appropriate AM rig. If you don't hear me on 50.4 then tune down to 29.0-
29.2 Mhz where I might be stoking the old Heathkit DX-100.

I don't see why 145.5 Mhz would be a problem if you did feel the need to
run 2 meter AM. Its a packet frequency in this area.

Seeya on AM!

>>Written by man as commanded by God. Come on, Burt, what are you...some
>>kind of atheist?

what kind of uneducated trailer trash could even equate not believing in the Bible with being an atheist. The majority of our founding fathers were deists (Drew, that means that they didn't believe in an all-powerful, Christian-type "God", but they did believe in a creator) -- Thomas Jefferson, Ben Franklin, Thomas Paine, George Washington, etc. All were deists -- not atheists. I'm sure that the christian partisan school system in lovely central florida say something different.

obviously you are not bright enough to realize that your culture has brainwashed you into believing all of it's dogma. you judge other cultures and their beliefs to be somehow less than your own. you view the world from a narrow, frightened corner of existence. your closed mind will serve as your own hell, as you will never truly experience people who are different from yourself as individuals in their own right. you will never be able to really appreciate another human being that may be slightly different than you -- you will always have a cultural bias that you will never be able to escape. sad. so sad.

KAWIN NEWS - Announcing BeaconClock and KaWin 6.48

It's a double-header! The initial release of BeaconClock,
and KaWin 6.48, and both are ready for download from the
KaWin Home Page:

http://www.mutadv.com/kawin

BeaconClock is Freeware for DXers who share an interest in
monitoring the NCDXF/IARU beacons!

KaWin 6.48 enhancements include:

Receive Window pop-up menu now includes a "Freeze Receive
Window" option. When checked, this inhibits automatic
scrolling to the end of the window after each pop-up menu
operation.

Context Selection Tab pop-up menu now includes a
PurgeContext menu item.

Option/Identifiers now highlights (yellow) all parameters
whose current value differs from the new suggested value.

Option/Identifiers now sets the WTEXT parameter for Kams.

Plus, many more enhancements and fixes - all described in
the Squawk64.wri file.

The KaWin News mailing list has been purged of all problem
email addresses. If your address was inadvertently removed
please accept my apologies and re-subscribe. Please pay
close attention to the email address you provide and/or the
"reply to" address set in your email client.

To subscribe to the KaWin News mailing list, send email to
stan@mutadv.com with the word SUBSCRIBE in the subject line,
or use the handy subscription link on the KaWin Home Page.
To be removed from the list, send email to stan@mutadv.com
with the word UNSUBSCRIBE in the subject line and be sure to
include the email address this message was sent to in the
body - I cannot remove you if I don't know your address!

In article <855047830snz@microvst.demon.co.uk>, tgold@microvst.demon.co.uk ("Anthony R. Gold") writes:

>Might I also suggest regular (every ten years?) re-qualification for all >higher classes of license using the then current examinations. If that >change ever came in, the anti-cw lobby might really bloom!

A meaningless happenstance, as most people would readily pass a similar test. Since the question pools and correct answers are public information now, you would do nothing except cause meaningless hassles for folks. Quick question, how many elders flunk mandatory driving tests today? It's not too many in the states where it's required. Most people taking a test again, manage to pass the silly things. There are even statistical methods of predicting how many failures you'll get. The people you should worry about though, are the ones who passed the extra 30 years ago, and haven't done anything more challenging.
>
>I wonder how many of today's multiple-guess Extras, perhaps some who >were originally examined by Extra's who qualified with the aid of a >physician's certificates, can achieve one solid minute of copy at 20 >wpm.
I suspect that most Extras upgraded in front of the FCC. I suppose you've forgotten all the Dick Bash hams, who without bothering to learn code, memorized all of the FCC code exams, and learned to answer based on the first five letters. Can you say unable to copy code? I thought you could. I'm cynical about your suggestions. What amateur radio needs more than even esoteric electronic information is incentive to experiment and be interesting. Amateur radio would grow even less than it is with your plan, and without growth, we're soon going to be underwhelmed by newcomers? Where are all of the novices sneaking to work code at 3:00 A.M. like they used to? Why can I scan two meters at 14:00 local time, and figure I'm lucky if I hear two QSO's, and that's ignoring the usually boring content of the things. You think of changes to the present structure as giving away something for nothing, and I personally look at the need for drastic change or this hobby is going to disappear. Most hams now live in communities where putting up an outside antenna to transmit is at the very least technically a violation of CC&R's. Most don't have the real estate to put up a full size 80 meter antenna, and some can't put up a short vertical without having to fear what will be damaged on their neighbor's property if it falls down. How old were you, when you first got interested in amateur radio? How many people that age are even remotely interested? Between telephones, the internet, and the difficulty of transmitting at times, why go to all this hassle. I also point out that instead of operating, you spend time reading things on Usenet, what does that say about the probable future of amateur radio?

> Any difference in performance in using RG-8 50 ohm coax
> to RG-8 52 ohm coax.

Not as far as I know, I would assume that one company is just being a bit more exact on the rating of thir coax, however both are probably exactly the same, such as a company like carol may mark their coax as 50 ohm to round things off, and belden may say 52 ohm, to be technically correct.

I could be wrong...

Hope this helps.

I would take a guess and say that the problem is probably the actual switch
inside the radio, since the three button switches on the FT-50R (10R etc)
have a tendancy to go bad and require replacing.
I've done the cel mod to my radio and have had no problems, however over
time I have had my LAMP button and my PTT button go bad, thus need
replacing the switch inside.

Have fun.

Depends on how far away and how good your local 440 repeaters are.

I know that where I am the 340 mw Alinco radio works fine to get into the
440 repeaters that I use.

Have fun.

Hmmm. Maybe they would get the hint? Either that or they would firebomb
your home.

Perhaps they need to be tested as dummy loads for a 25 kW 2.45 GHz amp?

Actually, I have (accidently, really) found that 100 Watts on 450 MHz quite
nicely
disrupts most consumer electronics within about 40 feet. Including the VCR
taping
my wife's soaps...

More bullshit. The cellular companies should tell their
customers that their phone calls are being listened to. The cellular
companies should spend the money to make their transmission secure.
Most any scanner today can pick up a cellular converstation on
another frequency know as an image,etc. So one does not have to have
cellular modified scanner to listen. It is inherit of all scanners to
be able to do this.
The mega buck cellular companies have some stiff competition
now from digital mobility services. They remind me of america online.
They need to keep up with the jones and update their equipment!

On Wed, 5 Feb 1997 20:04:13 GMT, brucem@eskimo.com (Bruce Miller)
wrote:

Tauzin: Toughen Eavesdropping Law

By JEANNINE AVERSA
Associated Press Writer
WASHINGTON (AP) -- All it took was a minute, a two-inch piece of
wire and a soldering gun for Rep. Billy Tauzin to convert a legal
radio scanner into one that picks up cellular phone calls.
Most experts agree it's illegal to do this but enforcement is
difficult.
Tauzin, R-La., chairman of the House Commerce Committee's
telecommunications subcommittee, who rigged the scanner at a
hearing Wednesday, is considering legislation to toughen laws
against altering listening equipment.
Cellular telephone intercepts by scanner caught the public eye
after a Florida couple using a police scanner taped a conference
call among Republican leaders, one on a cell phone, discussing
House Speaker Newt Gingrich's ethics case. Parts of the tape were
subsequently printed in The New York Times.
Of 10 million legal scanners sold in the United States, it's
estimated that a ``few hundred thousand'' have been modified to
pick up cellular frequencies, testified Bob Grove, whose North
Carolina company offers such alteration services. New digital
cellular technology is supposed to make such eavesdropping more
difficult.
Tauzin used the off-the-shelf police scanner he altered to pick
up a conversation between willing participants, Rep. Edward Markey,
D-Mass., on a cellular phone and Rep. Anna Eshoo, D-Calif., on a
regular phone.
Grove insists he operates within the bounds of the law. Markey,
who wrote a 1992 law designed to protect cellular callers' privacy,

disagreed.
``It's illegal to modify,'' Markey declared, vowing to rewrite the law to clearly block the sale of modified devices.
Markey's law, which took effect in 1994, made illegal the import, manufacture and sale in the United States of scanners that work on cellular frequencies. It also required that new scanners cannot be ``readily altered'' to pick up cellular calls.
Information to turn police scanners into cellular scanners is available on the Internet and in some magazines, Tauzin said.
``The law and its enforcement have been inadequate,'' testified Thomas Wheeler, president of the Cellular Telecommunications Industry Association, representing cellular companies.
Wheeler, who helped Tauzin demonstrate how easily legal scanners can be modified, asked for tougher laws to cover new technologies.
``It is time for the electronic stalkers ... to stop thumbing their nose at the Congress and trampling on individuals' rights,'' he said.
``There are laws on the books protecting the privacy of these calls,'' Tauzin said, ``but apparently they may not be working the way Congress intended,''
In an interview with The Associated Press, Grove said his company, Grove Enterprises Inc., operates legally because it neither sells nor markets altered scanners.
``There is no caveat, no direct prohibition against modifying those scanners,'' Grove said.
While those precise words are not used in the law or regulations, communications attorneys say companies or individuals that modify scanners to pick up cellular signals are violating federal provisions.
In general, it violates federal law to intercept a cellular telephone conversation and pass on the contents to another party. The exceptions: when police obtain court orders to use wiretaps in monitoring suspected criminals and when one party to a conversation has given permission. Many states don't allow eavesdropping based on such consent agreements.

Maybe your detector needs recalibrating. As I understand the term
sour grapes, it refers to envy. What privilage enjoyed by whom do
you believe that I lack, let alone could possibly envy?

On the complete contrary to envy, I am concerned pnly for others who
enjoy less privilages than the more exalted classes based upon once-
tested skills that may no longer be current. I can see some fairness
in the system whereby better skills are rewarded by greater
privilages, but not that long forgotten skills are still so rewarded.

Wow,
attack a person based on politics.... I hate to say it, but you
already lost the battle (and the war). What do you really have to
prove here. I have read several of your postings and find that you
have reversed yourself on several issues. If you can't maintane
consistancy among your postings, then stop and think before
continuing.... THEN, dig up any posts you made that day, read them,
THEN respond with a coherant and thought out response.... It would
make life a little more pleasant....

>For the record, weenie, I weigh exactly ... (wait a minute) .... 192. I
>work out 5 days a week, don't smoke (for 5 years now), and drink only
>occassionally. I can run 3 miles .... how about you, porky? I can do 50
>situps for 7 different sets .. how about you, porky? I also lift weights,

>go get your shoe shine box and get out and go to work ! Your mama needs a
>pair of new shoes ... and a face job, while you're at it too.
Again, you attack someone based on some characteristic that you don't
like (or accuse someone of having). Perhaps you had better look at how
many fingers you have pointing back at you when you point fingers at
everyone.... Sheesh! I am not sure you are "mentally healthy" there
bud..... Oh well, just an opinion.....

Oh come on. Not all straights are insisting that they are superior and saying that just because they constitute a majority this gives them the right to deny whatever rights they want to to minorities. The ones that are certainly are obnoxious, however.

I've never heard of the term "twinkle toes" being used to refer to straights, though.

If you are getting ready to use a digital storage oscilloscope (DSO), you should consider the most common mistakes made trying to use them.

The Top 10 Most Common Mistakes Using a DSO

* Believing you don't have the time to learn how to master your DSO.

* Starting a session after someone else has used the DSO and not first doing a default reset or going to a known front panel status.

* Undersampling the waveform as a wider time is attempted to be viewed with too short of memory DSO.

* Looking at too small an area of time so the view seldom includes the views of causes AND effects.

* Not getting and reading all of the DSO application notes that address your project.

* Squeezing 4 traces on a single grid and using the volts/div. control to bring each waveform to a little less than 25% of full scale and thus throwing away 2 orders of magnitude of resolution and accuracy.

* Taking only 1 measurement and believing "the truth is known" instead of using persistence, histograms, statistics, etc. to let the scope show what is changing over time. Similar to NOT using FFTs to see what is changing in the frequency spectrum.

* Using a passive probe and trying to measure a high frequency and/or load sensitive circuit.

* Not using the scope's built-in measurements and using cursors or counting grid squares for every measurement.

* Not speaking with others in your company or team that use your model DSO and getting their techniques, front panel set-ups, remote control software ideas, etc. An informal users group can be an incredible asset and save you a lot of time.

Check PTT Lock function. Also, try CPU reset, and remember, a LOW
battery may make rig receive normally, but not transmit.

Good Luck!

Take a good look at Dana's posts.

THIS is what is wrong in the country. Not only is "right is wrong and
wrong
is right"....but look how they try and justify that wrong behavior???

Dana, you really didn't read my post on why homo's have SO MANY
problems....other than AIDS. THAT you cannot ignore, justify or excuse
away. Again...those problems are:

Increased rates of rectul cancers
Increased rates of bowel cancers
Increased rates of bowel disfunction
Herorroidal problems
Shigilla and other bacterial illnesses
etc., etc., etc.

Strange how "mother nature" (Noticed I didn't say GOD!) teaches us when
we do something wrong to our bodies. When you smoke....you get cancer,
when you drink...you kill your liver....and when you bust someones
booty....
you get illness....

Pretty easy to understand that, Dana! Right?

73 and have a hate free day.......

So have I - but ironically that's the whole reason why I TOTALLY SUPPORT Roy, Brian Beezley, and all the others who have turned MININEC and NEC into usable products.

The developers of NEC and MININEC were mostly interested in the code itself, not in using it. To use the PD version of MININEC, you have to type in the antenna details every time you run the program, and then puzzle over tables of numbers which are the only form of output. NEC is even worse - its input format is based on a deck of punched cards!

What W7EL, K6STI and the others have done is to make MININEC and NEC usable by people who are interested in antennas, not computing. What you're paying for is the user interface. It's called "added value", and believe me it's worth every penny.

[Yes, I do have a commercial interest to declare. Because I believed in what I've just said, my company was Brian Beezley's agent in Europe for some years before he took over his own marketing worldwide.]

I would like to echo these sentiments of support for those like Roy and Brian. As an electronics design engineer for over 30 years I was often "encouraged" by friends and relatives to "invent something". My answer to them was "I invent something everyday, here it is, go make some money with it". I know that a very hard part of having a sucessful product is the genius of the user interface, hard work, and support that you give the product. The words "played" and "toyed" in the email correspondence are probably accurate.
My hat is off to you Roy and others who have given me many hours of enjoyment and enlightenment while using their programs.

Heard a new tune last night on "The Zoo." In addition to the usual catchy little ditties heard here, like "The Stump-Jumper Polka" and "Oh, Herbie", we now have a song dedicated to the ARG's arch-rival "Pork Butt."

Also heard early in the evening was a spoken voice, obviously on tape, saying "Which marijuana we gonna smoke before we have sex, mommy? One or two?"

And the hits just keep on coming...

If you want a cellular-capable scanner, I would strongly suggest you get it now.

I was just watching Bob Grove on CNBC as well as the Senate taking up "Cellular Phone Privacy" on C-SPAN 2. Neither party wants any more "incidents" like the Gingrich call snafu, and tough new anti-monitoring legislation will be one of few things that they will be able to agree on this session.

==>Editorial: Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

IN THIS EDITION:

* Hams gain ground in Little LEOs battle
* YLRL founder Ethel Smith, K4LMB, SK
* Vanity update
* Ham-entrepreneur gives $35 million to university
* Tuscaloosa tornado
* Hams asked to contribute to DGPS study
* Solar report
* In Brief: This weekend on the radio; Idaho hams help flood victims; Copy this weak signal and WIN $100!; Ham named to board; Au revoir, CW!

AMATEUR RADIO GAINS GROUND IN LITTLE LEOS BATTLE

As the fight continues to prevent hams from having to share 2 meters and 70 cm with the Low-Earth-Orbiting satellite industry, changes favorable to Amateur Radio have been incorporated in a draft report that will eventually go to the FCC. While the Little LEO industry persists in its efforts to secure a foothold on both bands, it seems to have turned its sights away from 144 to 146 MHz in favor of 146 to 148-MHz, which is not an amateur allocation in Region 1. But, most significant was the addition of eight words--at the ARRL's request--to a draft report section dealing with sharing with the Amateur Radio: "Any consideration of sharing would require further study." AMSAT supported the League in requesting the changes.

The latest draft also now states, "The diverse nature of the Amateur Service characteristics makes sharing difficult, but it has not yet been demonstrated to be impossible." The Informal Working Group-2A (IWG-2A) approved the changes at its January 21 meeting in Washington, DC. An earlier draft of the same section had called sharing "difficult, but not impossible" and claimed that studies had not considered certain sharing techniques discussed elsewhere in the report. The ARRL objected on the grounds that its

study had taken some of the sharing techniques into account.

In this section of the report, the Little LEO industry also backed away from references that cited Resolution 640 (an ITU radio regulation that involves the use of specific bands on an emergency basis) as a way to leverage access to 430 to 440 MHz and 146 to 148 MHz in Regions 2 and 3, where that 2-meter band segment is an exclusive amateur allocation.

It's expected that when the FCC's WRC-97 Industry Advisory Committee (IAC) meets March 5, it will adopt the sharing section of the report (Section 4.12) as part of its report.

With the possible exception of 144 to 146 MHz, Amateur Radio still is not out of the woods, however. Another paper still under consideration in IWG-2A--submitted by a Little LEO consultant at the January 21 meeting--proposes little LEO sharing in several bands, including 146 to 148 and 430 to 450 MHz in those parts of the world where the Amateur Service is not primary (which, in the case of 430 to 450 MHz, includes the US), with provisions for emergency use elsewhere.

The ARRL objects to these proposals, noting that they are inconsistent with the report language that's already been agreed upon. The US Department of Defense objects to little LEO allocations at 430 to 450 MHz, where radiolocation (radar) is primary. Military radar and Amateur Radio operations have a long record of coexistence that would be upset by the introduction of a new satellite service.

Two Little LEO representatives on IWG-2A declined to lend their names to the most recent proposals, which were submitted in the names of CTA, E-SAT, Final Analysis, GE Starsys and VITA--all players in the Little LEO effort.

Any papers on which agreement cannot be reached within IWG-2A will not be included in the body of its report, but will be included in an annex along with opposing comments. At future IWG-2A meetings, the ARRL will continue to protest the inclusion in this paper of the 146 to 148 and 430 to 450-MHz bands.

YLRL FOUNDER ETHEL SMITH, K4LMB, SK

Ethel Smith, K4LMB, of McLean, Virginia--who inspired and helped found the Young Ladies Radio League (YLRL)--died February 5. She was 79. In accordance with her wishes, no services are scheduled.

A ham for more than 60 years, Smith--a Wenatchee, Washington, native--discovered "wireless" as a youngster and became licensed as W7FWB in 1936. A story in QST for May 1940 outlines how Smith's letter to QST encouraged other female hams to form their own organization, which became the YLRL in October 1939 (with Ethel Smith as its first president). Her stints with the Army and Navy during World War II led to an offer from the Naval Research Laboratory in Washington, DC, in 1945 (she joined the Naval Reserve in 1950 and remained an active reservist for 10 years). Smith also participated in the formation of the Foundation for Amateur Radio (FAR) in 1957. Around that same time, she met and married the late John "Tex" De

Bardeleben, W4TE (ex-W3CN), who was with the FCC. The couple set up housekeeping in Virginia, and she later served as the Virginia SEC (1966-69) and as an ARRL assistant director under four different Roanoke Division directors. Last August, six months after her 79th birthday, she celebrated her six decades in Amateur Radio by passing the Extra Class examination.

In addition to being a member of ARRL, Ethel Smith was a member of QCWA, served as its executive secretary and general manager in 1974-75, and was elected to the QCWA board of directors. Her other recognitions include: Ham of the Year, Washington, DC, Mobile Radio Club (1965); ARRL Roanoke Division Service Award (1972); Dayton Hamvention Special Achievement Award (1984); QCWA Roll of Honor (1987); Radio Club of America Fellow (1988); and Foundation for Amateur Radio Ham of the Year (1993).

In an article in last fall's QCWA Journal celebrating Smith's 60 years in the hobby, she was quoted as saying: "Amateur Radio is still the main focus of my life. It has brought me all the good things that ever happened to me. It gave me a challenging and rewarding career. It gave me a wonderful husband and the greatest collection of friends in the world--all over the world. I owe more to Amateur Radio than I can ever possibly repay." The quarterly featured a front-cover picture of Smith in her W7FWB shack. The QCWA has put $500 into its scholarship fund in memory of Ethel Smith.

ARRL Executive Vice President David Sumner, K1ZZ, expressed sorrow at Smith's passing, calling her "a leading light in the ham community." Sumner said that she "never stopped contributing, learning, and growing. I don't think it ever would have occurred to her that she should."

VANITY CALL SIGN PROCESSING STILL ON HOLD

Vanity call sign processing apparently will remain on hold for a while longer as the FCC's Gettysburg, Pennsylvania, office continues to deal with a backlog of vanity applications that required special handling--the so-called WIPS (work in process) stack. As of February 6, WIPS was backlogged to mid-November. An FCC spokesman said the FCC will process vanity applications received in December, January and February--in parts or all at once--after it has completed work on the WIPS backlog. The FCC has not processed any vanity call sign applications since mid-December, but some new call signs have trickled out over the past several weeks as the FCC resolved issues on WIPS applications. The last applications processed were received by the FCC prior to December 1, 1996.

Although vanity Gate 2 opened in late September, the program remains popular, and vanity call sign applications continue to pour into Gettysburg office. During January, Gettysburg got 945 applications, 479 on paper and 466 filed electronically.

The FCC has not said when Gate 3 will open.

HAM-ENTREPRENEUR GIVES $35 MILLION TO USC

California businessman Gordon S. Marshall, W6RR--who credits ham radio for sparking his interest in electronics--is donating $35 million to the

University of Southern California's School of Business. Marshall, 77, graduated from USC after World War II service as a bomber pilot. Marshall founded Marshall Industries in El Monte, California, in the 1950s and went on to make his fortune as one of the country's largest distributors of electronic components. In recognition of Marshall's largesse, USC has renamed the business school after him. The donation is the second-largest ever made to USC. The school says some of the money will go toward new programs, including one that will send all 258 first-year MBA students to study abroad.--Los Angeles Times (tnx to Stanly Savage, W6ABN)

TUSCALOOSA TORNADO

Ham radio was a vital link when a tornado hit Tuscaloosa, Alabama, on January 24. The National Weather Service put out a call for radio amateurs to help relay storm reports. From the Mississippi border on the west to Georgia on the east, spotter groups throughout the state activated and filled various frequencies with emergency information. In central Alabama, large hail was widespread. Amateurs relayed dozens of reports of hail, up to golf-ball size. In West Alabama, a tornado slammed into Tuscaloosa shortly after 5 PM, killing one person and causing extensive damage. Hams stayed on the job from mid-afternoon until nearly midnight, running Skywarn nets and assisting with damage reports. Other hams helped with Red Cross disaster relief and emergency management operations. At one point, more than half a dozen Alabama counties were under tornado or severe thunderstorm warnings at the same time. Hams stayed on alert overnight to provide important information on the severe weather in the area.--Amateur Radio Newsline

HAMS USING APRS AND GPS ASKED TO CONTRIBUTE TO DGPS STUDY

Hams involved with APRS and GPS are being asked to contribute to a federal study into the benefits of establishing a national differential global positioning system (DGPS) radio beacon service. The US Coast Guard and the US Army Corps of Engineers already provide (or soon will provide) DGPS signals in coastal areas and along navigable waterways. Terrestrial DGPS signals--in the 285 to 325 kHz spectrum--complement satellite GPS data by increasing their accuracy. Ted Pugh of PB Farradyne Inc, which is studying the benefits and feasibility of setting up an inland DGPS system, wants to hear from the amateur community about its use of GPS and APRS in public safety applications, and how DGPS might help. "We are interested in any public benefit you or your organization might identify for such an undertaking--especially as it may relate to public safety or public betterment applications," said Pugh in a letter to ARRL HQ.

Pugh estimated that nationwide, no-cost DGPS service could be in place by 2001. Comments may be sent to John F. "Ted" Pugh at pught@farradyne.com.

SOLAR ACTIVITY UP A BIT

Solar forecaster Tad Cook, KT7H, in Seattle, Washington, reports: Solar activity rose a bit this week, but only slightly, with the solar flux above the 90 day average of 77 for three days. Average sunspot numbers were almost three times the average of the previous week.

Geomagnetic activity was slightly lower. The geomagnetic field became disturbed a couple of days before this reporting period (on January 28) because of a high-speed solar windstream from a coronal hole on the Sun. This caused a geomagnetic storm, more pronounced at higher latitudes, which resulted in the usual absorption of signals and poor conditions. There is a possibility for some slightly unsettled geomagnetic conditions over the next few days, and again, but a bit more severe around February 22-24. Solar flux is expected to drop down to the lower or mid-70s until February 21, when it is expected to rise again, going above 80 after March 1.

Sunspot numbers for January 30 through February 5 were 15, 13, 14, 36, 45, 44 and 33, respectively, with a mean of 28.6. The 10.7-cm flux was 73.6, 72.4, 71.3, 78.4, 79.6, 80.7 and 75.3, respectively, with a mean of 75.9. Estimated planetary A indices for the same period were 11, 8, 6, 10, 7, 5, and 7, respectively, with a mean of 7.7.

Here are a couple of path projections for this week, from California to Japan and from Ohio to Europe. From California to Japan, check 80 meters from 0730 to 1530 UTC, 40 meters from 0630 to 1700 UTC, 30 meters around 0430, 1230, and 1600 to 1900 UTC, and 20 meters from 2200 to 0130 UTC. The 17-meter band should be good from 2230 to 0030 UTC, and 15 meters around 2300 UTC. From Ohio to Europe, check 80 meters from 2200 to 0800 UTC, 40 meters from 2100 to 0100 UTC and from 0530 to 0900 UTC, 30 meters from 1400 to 1830 UTC and around 2000 UTC, and 20 meters from 1530 to 1730 UTC.

IN BRIEF:

* This weekend on the radio: North American Sprint, CW, 0000 to 0400 UTC February 9; QCWA Golden Anniversary QSO Party, 1400 UTC February 8 to 0600 UTC February 10; IDRA World Wide RTTY WPX Contest, 0000 February 8 to 2400 UTC February 9. See February QST, page 103 for details.

* Idaho hams help flood victims: Fruitland, Idaho, police officer Stephanie Steele, KC7DBA, directed traffic in Payette, Idaho, January 11, but not for the reasons that usually place her in that role. This time, Steele--the president of Treasure Valley Radio Association in Fruitland--was directing a line of pickup trucks into position on a recently flooded street, where she and other hams had gathered to help clean up the homes of flood victims--among them, club members Jim and Leora Johnson, W7TYG and KB7WFI, respectively, and Lewis Moberly, N7IFE. Steele conceived and directed the work party, which involved some two dozen ham volunteers. Flooding of the Payette River ravaged several neighborhoods during early January.--Treasure Valley Radio Association

* Copy this weak signal and WIN $100! A nonham has become the first winner of the Mike Cook, AF9Y, weak-signal challenge. Gary Huntress, an electrical engineer at the Naval Undersea Warfare Center in Newport, Rhode Island, deciphered the call sign of the very weak EME signal calling AF9Y from a 60-second .wav file that Cook has had posted on his Web page, http://www.webcom.com/af9y/ for the past couple of years. In addition to the $100 prize, Huntress also got a free copy of Cook's FFTDSP42 program.

Huntress has agreed to keep the identity of the calling station a mystery so the contest can continue. Cook says he'll award another $100 to the second successful identification of the station.

* Ham named to board: President Clinton has named Alberto A. Sagues, KA4MTO, of Lutz, Florida, as a member of the Nuclear Waste Technical Review Board. Sagues, 50, is a professor of civil and environmental engineering at the University of South Florida.

* Au revoir, CW! French maritime radio authorities phased out the use of Morse code on January 31, after 93 years, in favor of newer technology. The US Coast Guard abandoned CW two years ago.--Press reports (tnx to George Chaet, W1RGH)

From what I've seen, all the dual-band rigs that are capable of VxV and UxU, as well as VxU will be capable of doing what you're talking about. I use an Icom Z1A, but the Yaesu FT-530, Kenwood TH-79A, Icom W31 & W32, etc will all do that.

PA0RNI is leaving on feb. 8th for a short trip to Curacau and Bonaire in
the Dutch Carribean. The first week from feb.8th to feb.15th on Curacau and
the second week on Bonaire. The callsign is PJ9/PA0RNI.
I also want to do a lot of scuba diving, so if I have no time for the set
there is an automatic device sending the appropiate information.
Frequency is about 10kc from band-end (3610, 7050, 14110 etc.) on SSB
+/- QRM. Please send your receptionreports via my home-call PA0RNI in
the Netherlands (please add dutch QSL-region R08)
73
Rene.

3024. 14.313Mhz...The Madness Continues

Yesterday at this time, we were being entertained by the sounds of the CHICKEN clucking on 'The Daytime ZOO of Amateur Radio." Today, they have actually managed to top yesterday's insanity. As I write this, someone is...again, I kid you not...someone is transmitting the audio portion of a TELEVISION INFOMERCIAL for the POWER-RIDER!!" "For only three easy payments of $49.95 plus tax and shipping, you too can experience the weight loss benefits of the POWER-RIDER..."

I wonder if this is a thinly-veiled hint directed towards members of the 14.313 community?

And the hits just keep on coming....

ARLP006 Propagation de KT7H

ZCZC AP06
QST de W1AW
Propagation Forecast Bulletin 6 ARLP006
From Tad Cook, KT7H
Seattle, WA February 7, 1997
To all radio amateurs

SB PROP ARL ARLP006
ARLP006 Propagation de KT7H

Solar activity rose a bit this week, but only slightly, with the solar flux above the 90 day average of 77 for three days. Average sunspot numbers were almost three times the average for the previous week. Geomagnetic activity was slightly lower.

The geomagnetic field became disturbed a couple of days before this reporting period (on January 28) because of a high speed solar windstream from a coronal hole on the Sun. This caused a geomagnetic storm, more pronounced at higher latitudes, which resulted in the usual absorption of signals and poor conditions.

There is a possibility for some slightly unsettled geomagnetic conditions over the next few days, and again, but a bit more severe around February 22 to 24. Solar flux is expected to drop down to the lower or mid-seventies until February 21, when it is expected to rise again, going above eighty after March 1.

Sunspot Numbers for January 30 through February 5 were 15, 13, 14, 36, 45, 44 and 33 with a mean of 28.6. 10.7 cm flux was 73.6, 72.4, 71.3, 78.4, 79.6, 80.7 and 75.3, with a mean of 75.9. Estimated planetary A indices for the same period were 11, 8, 6, 10, 7, 5, and 7, with a mean of 7.7.

Here are a couple of path projections for this week, from California to Japan and from Ohio to Europe.

From California to Japan, check 80 meters from 0730z to 1530z, 40 meters from 0630z to 1700z, 30 meters around 0430z, 1230z, and 1600z to 1900z, and 20 meters from 2200z to 0130z. 17 meters should be good from 2230z to 0030z and 15 meters around 2300z.

From Ohio to Europe, check 80 meters from 2200z to 0800z, 40 meters from 2100z to 0100z and from 0530z to 0900z, 30 meters from 1400z to

1830z and around 2000z, and 20 meters from 1530z to 1730z.

> 73 de Jim - KF6CR

Well Jim, you have to figure it's probably the same group or type who
monitors those "nasty" 20m and 80m frequencies then reports on them. As
if anyone with a radio couldn't do it themselves or better still it's as
if anyone with a radio really gives 2 poops about it in the 1st place.

Just a musing, that's all

I'd be careful firing too many GUN's if I were you. Remember this (Len should)

This is my rifle,
this is my gun,
one is for shooting,
the other for fun.

Some trivia....the 16" main armament on the US "mothballed" battleships , Iowa Class, are referred to as 16" rifles, not guns

For what it's worth

Follow me on this ---
Time is the reciprocal of frequency, right?
Since the Hertz is the unit of frequency and -

Hertz (car rentals) advertises itself to be Number one and -

AVIS is the number two rental company -

Doesn't it follow that the unit of time should be the Avis since Hertz
is one over Avis???????????????

I can't imagine why ANYONE would assume that the people on this newsgroup are "supposedly smart". Why would you say that? If you have a high IQ, all you have to do is read the messages and you would never conclude that.

I'm writing an article for QST about hams who served in the Army or Marine Corps in radio or radio related areas during World War II. (See my article on the maritime services in the October '96 issue.) I would like to talk to any ham who saw such service. If you are such a vet (or you know someone who is) please e mail at: Laodah@aol.com. Thank you

Jerry:

Of course, anyone who thinks that the CW requirements keeps the "lids" out has not thought through the issue. That argument makes no sense whatsoever. Because CW, like much of ham radio, has become somewhat irrelevant (although still fun to many), the old timers use this non-sensical argument because there are few other arguments to be made.

The bottom line is that guys like me (who did it the hard way) either have to suck it up and let people have the same privileges w/o the code or come up with a viable solution that keeps everyone happy WITHOUT the code. We need new blood in the hobby if we are to have any chance of keeping the thing going. Since most hams are old as hell, they're dropping like flies!!

I will add that, in a pinch, the code is easy to learn (unless you have some sort of mental disability) so if you REALLY want to get on the air, you can suck it up and do it, intellectual argument be damned.

If the cellular industry is so bent on insuring privacy, then they need to invest in some sort of digital system that is more difficult to intercept, instead of relying on legislation.

As far as rights go, how about my rights? If my body is forced to absorb these electromagnetic signals, then I should have a right to decode them so I know who is bombarding my body with this radiation.

I kinow this is totally useless, but does anyone have e-mail addresses for Representatives Tauzin (R-LA) and Markey (D-MA). These guys are very dangerous.

3048. Active Filter Design Breakthrough

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-07 00:00:00 UTC
From: John Haag <jhaag@webblabs.com>
Message-ID: <32FB861F.14A0@webblabs.com>
Source record: 205143

ACTIVE FILTER DESIGN ENVIRONMENT

Developed For the Active Filter Houses

Now Available to Every Design Group

The Webb Laboratories Active Filter Design Environment is the only complete synthesis solution available! Standard features include:

User-Definable Filter Circuit Topologies
User-Definable Synthesis to Poles and Zeroes
User-Definable Simulator Netlist Generation
Interactive Time Domain and Frequency Domain Graphics
Pole/Zero and Component Sensitivity and Worst-Case Analysis
Schematic Display and Print Functions
Graphics Plotter and Printer Support
Multiple Filter Combination for Complex System Design and Analysis
Synthesis to User-Specified Frequency Response in the Circuit Type of Choice

Users can design filters of lowpass, highpass, bandpass, bandstop and allpass types to 20th order. Filter characteristics supported include:

Butterworth
Chebychev
Inverse Chebychev
Elliptic (Cauer)
Bessel (linear phase)
Real Pole
Gaussian
Transitional Gaussian
Linear Phase with Equiripple Error
Symmetrical Ripple Delay
Papoulis
Parabolic
Catenary
Elliptic Contour

Implementation Circuit Topologies Include:

Multiple Feedback
VCVS
Biquadratic
State Variable
Reticon and national SC Filters
Single Opamp Biquad (SAB)
Dual Opamp Biquad

Simulator Interfaces are Included For:

SPICE
Touchstone (HP/EEsof)
Super Star (Eagleware)
ECA
Netopt

New! Standalone nodal circuit analysis is now included!

The Webb Laboratories Active Filter Design Environment is in use by EVERY known active filter supplier in the United States. Active filters are as necessary in today's systems as ever before, with operating frequencies increasing. Designs based on simple tables are no longer adequate. Your design group can now take advantage of the choice of the professional active filter houses. Complex filters can now be synthesized and reliably manufactured in-house, with component tolerances taken into account!

I guess I am on my soap box again! Well the phone copanies are trying to get in our pockets again. Please read the bulletin below and send your comments to the FCC. It's up to you to make some noise.....

dt

Subject: Proposed Phone Co. Internet Surcharge
Just received this on Internet. This looks like a real problem.
It was on TV News last night.
US West is one of the companies promoting it. Note FCC
comment deadline of Feb 13. Comment to isp@fcc.gov.
Subject: Phone Company Internet Service Charge
Date: Wednesday, February 05, 1997 11:36 AM
List of House of Reps:

http://clerkweb.house.gov/members/house.htm?57,22

List of Senators' published email addresses:

http://www.senate.gov/senator/membmail.html

I am writing you this to inform you of a very important matter currently under review by the FCC. Your local telephone company has filed a proposal with the FCC to impose per minute charges for your Internet service. They contend that your usage has or will hinder the operation of the telephone network.

It is my belief that Internet usage will diminish if users were required to pay additional per minute charges. The FCC has created an email box for your comments, responses must be received by February 13, 1997. Send your comments to

isp@fcc.gov

and tell them what you think.

Every phone company is in on this one, and they are trying to sneak it in just under the wire for litigation. Let everyone you know hear this one. Get the e-mail address to everyone you can think of.

Please forward this email to all your friends on the Internet so all voices may be heard!

Just passing it along.

Hello All,

I'm looking for a HAM radio VHF/UHF transceiver also capable of
scanning and receiving TWO frequencies AT THE SAME TIME. I would like
to use this feature to monitor both the repeater input AND output
frequency AT THE SAME TIME.
Also, is it possible to pre-program the 1st receiver to search and the
2nd one to track it at a fixed frequency spacing (such as 600KHz)?
This is useful to find HAM repeater frequencies.
I've heard about the Kenwood TH-79A, but I'm not sure it can do what I
need. Any pointers would be really appreceated.
Thank's!

When responding, please email directly in addition to posting
here, since our news server isn't very up to date. Please note
that you must edit the reply email address (remove the .NOSPAM
postfix). This has been done in an attempt to reduce the amount
of junk mail received here from automatic mailers. Thank you.

regards,
techno

>to RG-8 52 ohm coax.

No. You'll find that these specifications are "typical", and measurements will show variations much greater than two ohms from manufacturer to manufacturer, and even from lot to lot, anyway. Also, you're unlikely to encounter an application where even ten ohms of variation will make a noticeable difference in system performance.

/\

NEW MUF PREDICTIONS DATABASE AVAILABLE

We have completed another run of MUF predictions covering the period of February and March 1997. The predictions were based on anticipated levels of solar and geophysical activity and were computed using an ionospheric ray tracing engine to accurately determine MUFs, optimum signal takeoff angles, optimum frequencies, and other valuable information between 50 world-wide regions including Canada, the U.S., Europe, Asia, Africa, the UK, Australia, New Zealand, Hawaii, South America and many others.

Detailed information can be found at:
http://solar.uleth.ca/solar/www/predict.html

Any unanswered questions can be directed to COler@Solar.Stanford.Edu or Oler@Solar.Uleth.CA.

This is, to our knowledge, still the most comprehensive MUF predictions database available and is a valuable resource for anyone interested in High Frequency radio communications.

3057. BeaconClock, FREEWARE for DXers

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-07 00:00:00 UTC
From: Stan Huntting <stan@mutadv.com>
Message-ID: <01bc149e$0bf93140$1ee983cc@stan.csn.net>
Source record: 205184
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.misc

The NCDXF/IARU Beacons

One of the most enduring laws of DX states that there are at least two possible explanations for an apparently dead band: 1)propagation is poor, or 2)no one is transmitting. The NCDXF/IARU International Beacon Network addresses the second of these possibilities by insuring that reliable signals are always on the air, around the clock, from fixed locations worldwide. Each beacon uses identical equipment, including identical, omni-directional antennas. These beacons, sharing fixed frequencies at coordinated time slots, offer a powerful tool for evaluating propagation on the DX bands.

When complete, the network will consist of eighteen CW beacons in a time division multiplexed network, sharing a single frequency on each of the five amateur bands: 20m through 10m. The frequencies are shown in the Beacon Clock Frequency display. Each beacon transmits in a predefined ten-second window, repeating every three minutes. The schedule for each band is offset ten seconds from the next lower frequency band. Each ten-second transmission begins with the beacon's callsign followed by four, one-second dashes at 100, 10, 1 and 0.1 watts - four diminishing signals at precisely 10 dB power intervals.

Some of the eighteen beacons are not on-the-air on all five frequencies, others are not yet on-the-air at all. Beacons/bands that are reported by the NCDXF not to be transmitting are displayed in gray typeface. For more detail and current information on the status of the NCDXF/IARU International Beacon Network, visit the NCDXF/IARU web page, at

http://www.ncdxf.org/beacon.htm

OK, so the NCDXF/IARU have established a bunch of beacons out there - somewhere - each transmitting for ten seconds every three minutes on five different frequencies, that we can use to find band openings. But, how do we keep track of who is transmitting when and where to point the beam to listen for the next beacon? That's where BeaconClock comes in - BeaconClock answers the age-old question: "Who's on first?".

BeaconClock displays a real-time list of the next five beacons scheduled to transmit on the selected band and updates this list every ten seconds as the transmitting station changes. Information displayed for each station includes the callsign, short-path and long path beam headings and short path distance in Kilometers. Information for the currently transmitting beacon is highlighted at the top of the list. Armed with this information, a quantitative survey of possible DX paths on each of the five bands takes

just a few minutes.

But enough of this - you can discover the rest on your own. BeaconClock is FREEWARE program for DXers with Windows95 and you can download it directly from KaWin Home Page, at

Gary mentions about possible new work to do on HF, like new digital modes (digitized voice?). Maybe it's time, HF used to be AM, then 40 years ago we changed to SSB for an improvement (getting rid of carriers hetrodyning each other in your receiver, listen to CB some-time, ignoring all the sillyness there).

So let's make up a decent new HF mode that makes sense, avoiding semi-kludges like FSk on FM (packet on 2M). Okay, maybe something we can extract and apply to the IF strips of common transcievers.

Yes, that's good, soften them up a bit, then go and talk neighbourly to
them.

PACTOR NEWS is newsletter devoted to HF Digital Modes. With the demise of the Digital Journal, it is very important that we preserve a print medium. So, our publication has expanded from 4 to 6 issues per year and now includes columns on RTTY, CONTESTING, DXing, etc, by some of your favorite writers. (WS7I, K5DJ, W2JGR/0)

It's not only PACTOR any more. Our pages are open for all!

The MARCH 1997 issue will be out soon. If you are not a subscriber to PACTOR NEWS and would like a sample copy, please send a #10 self addressed and stamped envelope with two units of US Postage (or 3 IRCs) to:

PACTOR NEWS
P.O. Box 31
Clayton, Ohio 45315

>to use this feature to monitor both the repeater input AND output
>frequency AT THE SAME TIME.

Because I'm looking for such a beast myself, I've done a bit of market
research on my own (tried to post here but no-one answered).

Basically the tranceivers that do this are the Kenwood TH-79, the
Icom IC-W32, the Yaesu FT-51R and the Alinco DJ-G5.

The Yaesu FT-50R has some limited such capability in (I think) being able
to have a primary and secondary frequency and to switch to the secondary
if there's any activity.

The TH-79 and IC-W32 have independent volume and tuning dials for the
two bands. The others only have one dial.

Over in the UK, the FT-51R is the most expensive of the lot, followed
by the TH-79. The IC-W32 is not much cheaper either. The DJ-G5 is a star,
because it's packed with features and is the cheapest of the lot.

>Also, is it possible to pre-program the 1st receiver to search and the
>2nd one to track it at a fixed frequency spacing (such as 600KHz)?

I don't think this is possible in any of the above.

Here is what I sent to my representatives in Congress. Don't sit and cuss at the dark. Light a fire! Those of you who posted all those rantings and ravings would be better off telling your Congressional representatives what you think than commiserating with your friends.

"It is time for the electronic stalkers... to stop thumbing their nose at the Congress and trampling on individuals' rights,"

I think from this quote one can infer that Rep. Tauzin thinks there is a problem with electronic evesdropping. I don't. I'm a Maryland resident, and an Electrical Engineering graduate of The Johns Hopkins University.

Rep. Tauzin thinks the Electronic Communications Privacy Act (ECPA) ought to be strengthened. What he doesn't realize is that the law is technically impractical to enforce. It is a bad law and it is based on some faulty assumptions about how the technology works.

The ECPA regulation itself is based on a rediculous notion that the general public shouldn't look inside what can only be described as a house made of glass. Anyone with even the slightest inclination can modify a scanner to receive the cellular telephone band. There are far too many ways to receive the cellular telephone band to bother legislating against, and there is no way one could ever find someone who had defeated any of those measures.

The real problem is that there is no encryption on the cellular calls. This emperor has no clothes on, folks. What happened is that the cellular industry convinced Congress that a rediculous law, the ECPA, was reasonable. No engineer, technician, or hobbyist in their right minds took them seriously when they made this foolish proposal back in 1994. But Congress did.

Ignorance of technology is no excuse for a bad law any more than ignorance of the law is an excuse for breaking it. The laws of physics are not subject to a voice vote. What Rep. Tauzin wants to do is not practical, not enforceable, nor is it good policy. Instead, I call upon you to repeal the Electronics Communications Privacy Act (ECPA). Ask your fellow Congressmen why, with encryption being so cheap, easy, and secure --why are we still telling folks not to look at the naked emperor?

Jake Brodsky, mailto:frussle@erols.com

Special Bulletin 4 ARLX004
>From ARRL Headquarters
Newington CT February 6, 1997
To all radio amateurs

SB SPCL ARL ARLX004
ARLX004 YLRL founder Ethel Smith, K4LMB, SK

Ethel Smith, K4LMB, of McLean, Virginia--who inspired and helped found the Young Ladies Radio League (YLRL)--died February 5. She was 79. In accordance with her wishes, no services are scheduled.

A ham for more than 60 years, Smith--a Wenatchee, Washington, native--discovered ''wireless'' as a youngster and became licensed as W7FWB in 1936. A story in QST for May 1940 outlines how Smith's letter to QST encouraged other female hams to form their own organization, which became the YLRL in October 1939 (with Ethel Smith as its first president). Her stints with the Army and Navy during World War II led to an offer from the Naval Research Laboratory in Washington, DC, in 1945 (she joined the Naval Reserve in 1950 and remained an active reservist for 10 years).

Smith also participated in the formation of the Foundation for Amateur Radio (FAR) in 1957. Around that same time, she met and married the late John ''Tex'' De Bardeleben, W4TE (ex-W3CN), who was with the FCC. The couple set up housekeeping in Virginia, and she later served as the Virginia SEC (1966-69) and as an ARRL Assistant Director under four different Roanoke Division directors. Last August, six months after her 79th birthday, she celebrated her six decades in Amateur Radio by passing the Extra Class examination.

In addition to being a member of ARRL, Ethel Smith was a member of QCWA, served as its executive secretary/general manager in 1974-75, and was elected to the QCWA board of directors. Her other recognitions include: Ham of the Year, Washington, DC, Mobile Radio Club (1965), ARRL Roanoke Division Service Award (1972), Dayton Hamvention Special Achievement Award (1984), QCWA Roll of Honor (1987), Radio Club of America Fellow (1988), and Foundation for Amateur Radio Ham of the Year (1993).

In an article in last fall's QCWA Journal celebrating Smith's 60 years in the hobby, she was quoted as saying: ''Amateur Radio is still the main focus of my life. It has brought me all the good things that ever happened to me. It gave me a challenging and rewarding career. It gave me a wonderful husband and the greatest collection of friends in the world--all over the world. I owe more to Amateur Radio than I can ever possibly repay.'' The quarterly featured a front-cover picture of Smith

in her W7FWB shack.

ARRL Executive Vice President David Sumner, K1ZZ, expressed sorrow at Smith's passing, calling her ''a leading light in the ham community.'' Sumner said that Ethel Smith ''never stopped contributing, learning, and growing. I don't think it ever would have occurred to her that she should.''

3085. FS: 37' Telescoping Mast - $35

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-07 00:00:00 UTC
From: gvs@netcom.com
Message-ID: <32fc76ff.352505024@192.0.2.3>
Source record: 205212
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.antenna,rec.radio.amateur.misc

Telescoping Mast for sale
in San Jose, CA.

37 foot Telescoping Mast, material is schedule 80 PVC Tubing,
in 4 sections, with O.D's: 3.50", 2.75", 2.25", and 1.75". The
sections are held in place by a u-clamp and thru center eye-bolt
arrangement. Each u-clamp has 2 outer eye-bolts, along with the thru
center eye-bolt, which are used as guy points.

The bottom 3 sections use PVC sched 80 reduction union joints (very
beefy) which I reamed out to allow upper sections to slide thru
freely. The three over-lapping sections are over lapped by 12, 16,
and 18 inches, from smallest to largest dia., respectively. Each
upper section has 2 sets of 3 spacer bearings that take up the
excess play inside each over-lapping section.

As you may well have gathered, I have an Engineering background
and took some time designing this Telescoping Mast. It wasn't
something I just threw together.

The last 2 years in San Jose, CA, has brought storms with winds as
high as 75 mph. This Mast barely moved during these storms. Also, I
use three sets of guys which are marine-type nylon rope that is UV
resistant.

Mast is more durable and can withstand higher wind speeds than
a steel mast, when guyed properly. Also, Mast doesn't interact
with antenna like a steel mast would.

73,

: are volunteer firemen and some policemen use scanners to assist their
: community. I, a volunteer firemen, use my scanner to listen for calles
: for my department.

The thing I've always found ridiculous about this topic, is that some people must have no life whatsoever, to want to monitor phone conversations in the first place. I mean, these are probably people they don't even know, so who cares? The topic often comes up that hams' conversations on the air are so dull; I'm sure that the average person's telephone conversations are equally as dull, if not more so. "When are you coming home? Pick up a loaf of bread and a gallon of milk on the way."

And this idea of tougher legislation is so ridiculous. How the hell can this be enforced, even more so than the current regulations? All we need is one more unenforceable law.

3088. Connecting Handheld Scanner to Computer.

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-07 00:00:00 UTC
From: "David C. Marden, Senior" <ke2ag@injersey.com>
Message-ID: <32FB76C0.600E@injersey.com>
Source record: 205215

I recently was given a Uniden Bearcat Handheld Scanner. Has ten
preprogrammed channels, battery and external power supply and a
plug to connect to headphones.
I notice that it will cover 137 - 138 Mhz, the WEFAX bands. I have a

MFJ Terminal Node Controller and a Sound Blaster Sound card. Anybody
know of a way to hook this scanner up to my computer, and any software
(if I can't use the MFJ) that will allow me to copy WEFAXX? I can
adapt an external antenna (Inverted "V", 2 meter ringo ranger (?))
to the scanner.
Answer here or e-mail which ever way you wish.

Dave Marden (KE2AG@injersey.com)

Last post since the faggots have "thrown in the towel" with their arguements....

Let's start from the beginning;

This thread started with LAMBDA...the faggot ham club....announcing an award they were co-sponsoring with the ARRL. The question was raised by the anti-LAMBDA forces:

WHAT DOES "GAYNESS" HAVE TO DO WITH AMATEUR RADIO????

Then the arguements began with the pro-fags claiming that it's just like the YL's having a club. The anti-fags stated that the YL's don't justify their clubs existence because of their sexual behavior.

Then the posts started regarding the foggot livestyle.

And then the BIG question from the faggot lovers:

WHAT DOES THIS (their behavior) HAVE TO DO WITH AMATEUR RADIO???

BINGO!

You just won the debate for us! You went full circle to prove that a persons sexual behavior has NOTHING to do with ham radio! But gays DEFINE themselves by their sexual behavior!

Now how far do you think I would get if I went to the League and stated MY club wanted to sponsor an award??
(The club is MARC....MASTURBATING AMATEURS RADIO CLUB.....)
I might just give it a try to make a point.....

73, Fred

Oh I hope this isn't the beginning of a great ham v. scanner debate. However, I definitely find myself reaching for the scanner more often than the HF rig, which usually rewards me with static and hiss at night, the only time I have to listen to any radios. I think the police, fire, and aircraft are much more exciting than signal reports, if and when the bands are ever open. Scott, AB5YD.

3093. CAR BATTERY QUESTION

3096. 3894.5Khz...GET YER .WAV FILES HERE!

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-08 00:00:00 UTC
From: mnmaniac@aol.com
Message-ID: <19970208155100.KAA19530@ladder01.news.aol.com>
Source record: 205073

Over the past several days, I have been writing here about the sometimes amusing, sometimes disgusting antics on 3984.5Khz. This is the the frequency II affectionately refer to as "The Zoo of Amateur Radio." My mailbox has been flooded with comments, questions, and information as to what happens here, why it happens, and who's doing it. I would have never guessed there was this much interest in the activities occuring there. Hams and SWL'ers from around the world now tune in on a daily basis to follow the ongoing battles between the Stump-Jumpers and their adversaries. It's kind of a soap opera...you just gotta tune in or you might miss something important! <g> We are now prominently mentioned on 3894.5 as well. Early in the evening, when the "Zoo" opens for business, a special "thanks" goes out to SWL's and others who are tuned in to the nights "festivities." Who woulda thunk it?

But I have also gotten several e-mails from people who would like to hear the action, but do not have access to a receiver. These poor folks feel very left out of the process, saying things like "Gee, Drew...I can 'read all about it' on Usenet, but I can't hear for myself." What can I do?

In an attempt to satisfy the insatiable desire for these poor, "radio-challenged" folks to hear the action for themselves, I have painstakingly asssembled a collection of .WAV FILES which can be downloaded directly into your computer! This is the real stuff, folks! "Original hits, original stars", just like they used to say on the old K-Tel record commercials back in the 70s. Hear "Pig Pen Pete" screaming "HO HO, HO HO, HO..." to his hearts content and then being admonished by his fellow amateurs for his efforts. Catch a rare glimpse of Big Al, challenging Pork Butt to "crank it up on 94-point-5" and actually sounding like a fairly decent DJ in the process! They're all here...all your favorites from the now infamous 38-94-dot-5...Polly, Dan, Donnie, Marty, and all their friends. Carefully mastered in all their digital brilliance and available for you now. Don't delay, e-mail today!

oranto.ucs.mun.ca> <1997Feb8.094835.5871@ke4zv.atl.ga.us>
Distribution:

I support a _minimal_ CW requirement for HF: perhaps 5wpm for all bands, with stiffer written tests for the higher levels of license.

Several years ago a plane made an emergency landing in the Canadaian arctic. Its radio was damaged and could not transmit a voice signal, but the mic key was capable of sending a dead carrier, so an emergency call for help was sent via CW tapped on the mic key.

While the new digital mods are indeed faster and better in sending data under weak signal conditions, most hams (including myself) are "applicance operators", who may well not be able to fix such sophisticated hardware. CW transmitters are the simplest of all transmitters.

It's a helluva lot easier to troubleshoot a J-38 straight key than an AFSK circuit, especially under emergency conditions.

Ham radio has often been the only communications available in emergencies: when the Pentium or the Kantronics TNC gets sick, there may well not be a techie available with an O-scope to fix it in an emergency. The ability to send copyable 5wpm CW with a straight key improvised from a clothespin is a basic skill that all HF operators should have, IMO.

License class has never stopped Spew from breaking the law before,
so why would it do so now? He has routinely advocated illegal acts in this
and other newsgroups. I suspect that one of those "unidentified"
signals on 75 meters is actually originating from "Sunny Central Florida".

The MD2 algorithm should be available off the net. It is explained in
RFC 1319 and should be accessible through listservs.

MD2 is a one way hash function used in the PEM (Privacy Enhanced Mail)
protocols. It generates a 128 bit hash value for some arbitrary input.
It is similar to MD4 and MD5 but somewhat slower and not quite as
secure.

That may well be. Microsoft created quite a stir here in Canada when
they held back the french release of Windows95 in Quebec so they could
make packaging differences from that sold in France so that it
couldn't be grey marketed. That could very well be the reason here. I
hadn[t thought of that :)

>There is/was a ban on exporting *technology* to certain countries such as the

Yep. Especially "crypto" tech. As if other countries don't already
have as good a system (or the same one). :))

I cleaned out some old boxes from a far corner of the basement oday,
and I found the following old radio manuals. These are the
operating/technical manuals that came with the gear (most of them
contain schematics, tuning instructions, etc.). I don't want to make
any money from them, but I do want to recover postage costs. I will
supply any single manual for 5$.

"RCA MI-17400 Mobile Stations" for type CMCT-30A2T (trunk mount)
and type CMCT-30A2F (dash mount)

"Motoroa PT Series Handy-Talkie" for PT200 & PT300 series

"Heathkit Assembly Manual SSB Transceiver SB-101"

"Maintenance of GE Accent 450 2 way radio"

"Technical Training Manual for VHF mobile radio type DT75"

"GE MASTR Progress Line personal series maintenance manual" for
ET-90-A and ER-56-A

"Installation, operation & maintenance manual" for GE Progesss
line models ET-90-A and ER-56-A

If no one requests them I will be tossing them out.

Another once in a blue moon "CW saves the day" every few years
does not justify forcing everyone to learn a 150 year old technique.

> While the new digital mods are indeed faster and better in sending data
> under weak signal conditions, most hams (including myself) are
> "applicance operators", who may well not be able to fix such
sophisticated
> hardware.

At least in the US (and also per the ITU definition of ham radio) being an
appliance operator is not what ham radio is about ... you should be at
least trying to learn about how the radios work and should be developing
the skills necessary to assure proper operation of your equipment and
to repair it should it fail.

> CW transmitters are the simplest of all transmitters.

So what?

> Ham radio has often been the only communications available in
emergencies:
> when the Pentium or the Kantronics TNC gets sick, there may well not be a
> techie available with an O-scope to fix it in an emergency.

Modern equipment, properly maintained, is so reliable as to render this
virtually a null argument.

> The ability
> to send copyable 5wpm CW with a straight key improvised from a clothespin
> is a basic skill that all HF operators should have, IMO.

Ah, another citation of Morse Myth #2 (whipping up a rig from misc.
available
trash in the face of disaster to save the day with Morse).

Get real!

Modern digital techniques (and FM with repeaters) handle something like
99.999% of today's emergency traffic ... any assertion that Morse code
transmissions play any significant (measurable) role in modern emergency
communications is wishful fantasy.

Through the magic of modern technology, Carl (WA6VSE) and myself have been in contact with each other. We have agreed that this in-fighting, here on both rram and rrap does nothing to protect the ARS from the battles that are being fought now and soon to be declared.

In light of this, Carl has agreed to keep ALL discussions on a civil basis (no insults, innuendo, etc) and I have agreed to stop my self professed harassment of Carl.

We both feel that these newsgroups can best be used to further the ARS and that there is essentially room within the ARS "charter" for all concerned, both those advocating the retention and those advocating the elimination of the code requirement.

I personally will endeavor to keep this "peace". I have every confidence that Carl will do so as well and we both encourage all participants in the newsgroups to do the same.

Now is not the time to be a house divided.

As was said once is now said again "Once again, peace is now at hand and we can see the future.

On behalf of Carl and myself

73,

Steve KF2TI

Quite frankly Carl, you are so full of bullshit it must be coming out
of your ears.

You know damn well that most commercial radio gear from any manufacturer
contains custom ICs and SMT technology that the average ham does not
have the equipment or knowledge to repair.

So, why not take your pompous-ass attitude and blow it out of the
orifice at the other end of your body.

Manufacturers, and the amateur radio reliance on commercially-available
gear, by default makes most amateur operators "appliance operators"
even if they >DO< know how the radio works.

>Modern equipment, properly maintained, is so reliable as to render this
>virtually a null argument.

If that is the case, then why do people need to know how to fix it, as
you claim?

Hello

My name is Jill Hilliard and I am a contributing editor to The MicroStocks Review, an internet financial magazine. I thought you might be interested in knowing that, as I write this on Friday, February 7, half the stocks on our STRONG BUY list are up over 20% in just the last eight weeks.

Please understand that we do NOT evaluate stocks for short term gains but as long term investments. And these companies are NOT new, fly-by-night outfits with no assets but established small companies that are just coming to the attention of the Wall Street crowd. Still, it's rewarding to see such gains in such a short period of time.

Of course, the only way you'll know what stocks have made the grade is to visit our web site at:

http://www.microstocks.com

or type http://www.microstocks.com

into your internet browser. There are also free investment articles, a free mailing service and sample company profiles.

If you wish to be taken off our mailing list, please send a reply to this message with the word remove in the subject field. You will be promptly removed from our list.

Thank you

Jill Hilliard

Observers in LA might like my predictions and star charts at
http://www.astro.ucla.edu/~wright/sats.html
You need to have a Postscript viewer like ghostview setup to
see the charts, but you can download and print them if you
have a Postscript printer. This page is automatically updated
every week, and I plus many UCLA astro grad students just had
good views of Mir.

Remember the space shuttle is going to be with HST Feb 12ish on
so the combination will be really bright.

>want the UNI Hat. Thank you and 73, DE-KS4HK, Steve

Hi Steve,

I have an R5 as well which I have installed at the cottage with a pond for a groundplane :) Works great!

On the Hygain verticals: I have an 18AVT/WB in the backyard. The antenna is 22 years old this summer and was my first commercially manufactured antenna. It is (and always has been) ground mounted with anywhere from 0 (initially) to 20 (current) radials. It has performed flawlessly all this time. I work quite a bit of QRP (my first rig was an Argonaut) and have had nothing but success with it.

Electrically, it has been great. Only complaint is that the bandwidth on 80/75 is a bit narrow. I tuned it for CW and could use it on phone everywhere but 80 (enter tuner when in the mood to cheat :)).

Mechanically, It has also been good. I had to replace the short rods in the capacity hat about 4 years ago thanks to the local birds using them for perches :) and I replaced the lower section about 2 years ago due to some vandal who ran through the yard and grabbed it on the way by and broke the tubing loose from the base connection.

I have no hesitation about recommending it for those who want a trapped vertical. I have been considering replacing it with an 18HT as it would be usable on 160M with a base coil.

Hope it helps. My $.02's worth :)

J>I have neighbors who play loud music. Is their a way to jam their
>electronic equipment, e.g., CD player, to keep them from working? Would
>a transmitter of some sort work? Any help would be appreciated.

Yes! There is this device that transmits an elongated spherical solid
wave. The velocity and propagation time is somewhat slower than RF or
the speed of light, however it produces some very solid copy on any
receiver in it's vicinity.

I think one manufacturer of this transmitter is a company by the name of
Smith & Wesson. Finding a local dealer should not be too difficult.

Here is a summary of news items covered on edition #202 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 14-Feb:
-
1. FCC Continues to Put New Vanity Call Sign Grants on Hold
2. Hams Make Progress in Battle Against the Little LEOs Group
3. Florida Ham Receives Appointment from President Clinton
4. The Founder of YLRL a Silent Key at 79
5. University Receives Financial Grant from Well-known Amateur
6. RS-16 Launch Due at Any Time
7. TV Networks Purchase Digital Transmitting Gear, Here Next Year
8. French Maritime Operators End Use of Morse Code
9. Hams with GPS and APRS Experience Asked for Help with DGPS
10. "The RAIN Dial-up" from Chicago
11. Special Event Station Calendar
12. "Ancient Amateur Archives" with Bill Continelli, W2XOY
13. "This Week" Seeking Special Feature Producers/Commentators
14. Weekly Propagation Forecast
15. That Coffee at Your Shack Desk May Be New Data Storage Medium
-
Funding for the program's transmission and production expense was
provided this week by a grant from Jack Halem, KA6DLX, of Corona,
California, where "This Week in Amateur Radio" is heard Wednesdays
at 7:30 PM on the KA6DLX repeater, on 146.265 MHz, serving portions
San Bernardino, Riverside, Orange, and Los Angeles Counties.
Presentation of "The RAIN Dial-up" has been made possible by a grant
from Bill Brynteson, N0TWP, of Mounds View, Minnesota.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EST) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier. On the Internet,
audio is available each Sunday in 8-bit .WAV file format, sampled at
```

11.025 kHz, at http://www.intrlink.com/~sparky/wb4qoj/wb4qoj.htm through the courtesy of the Blue Ridge Video and Digital Society of Roanoke, VA. The service is carried on VHF/UHF repeaters throughout North America and on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.

-

Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (email sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

3137. SB104 chip needed by YV5BLP

Newsgroup: rec.radio.amateur.misc

>The TH-79 and IC-W32 have independent volume and tuning dials for the
>two bands. The others only have one dial.

How about the "scan on one frequency, track at a specified freq
difference on the other" question? If the unit had two independent
scanners running in parallel at the same speed that would meet my
needs. I could set each up to start search at a different frequency
and if the scan rate was identical then they would track at a fixed
distance (of course, locking on a signal on one should also stop the
other for this scheme to work).

>Over in the UK, the FT-51R is the most expensive of the lot, followed
>by the TH-79. The IC-W32 is not much cheaper either. The DJ-G5 is a star,
>because it's packed with features and is the cheapest of the lot.

I hope the DJ-G5 appears on Alinco's web page. I'll take a look.

>>Also, is it possible to pre-program the 1st receiver to search and the
>>2nd one to track it at a fixed frequency spacing (such as 600KHz)?

>I don't think this is possible in any of the above.

If some have separate tuning dials, why can't they have seperate
scanning circuits?

>>When responding, please email directly in addition to posting
>>here, since our news server isn't very up to date. Please note

>I have spent some time writing this followup, if you want to see it,
>spend the time to read the newsgroup.

Dear Vartan: take it easy...(No need to get upset...:-)
(I always say: tame your flame...:-)
Many times there are problems on our news group server, or I'm too busy to monitor all the newsgroups I've posted in. An email simply serves as an "alarm" to check the newsgroups as well as a safety measure should my news server not be up to date. For me, sending an email in addition to a post is easy: just one key press (up arrow while composing the followup posting). I always do it automatically. Maybe you should try Forte's Free Agent that I'm using?

Anyway, I'd like to thank you for your comprehensive response. I'll take a look at the products you mentioned (some already known to me). One more question: which has the fastest scanning speed?

regards,
techno

(P.S: When responding, please email directly in addition to posting here, since our news server isn't very up to date. Please note that you must edit the reply email address (remove the .NOSPAM postfix). This has been done in an attempt to reduce the amount of junk mail received here from automatic mailers. Thank you.)

3144. CW subbands again, was Re: The ARRL Letter Vol 16, No 5

email: wiansw@sydney.dialix.oz.au

SILENT KEY - PASSING OF A LISTENER
We regret to announce the passing of William Kerr Scott, L 20870 on Thursday 6th February at 5.30 pm following a long illness.

Bill, aged 72 years, was also a member of the Parramatta Amateur Radio Club and had been attending classes to obtain his licence. He was involved in weather satellite technology, computers and associated interests.

Sadly missed by his wife Doris, Brothers, Sisters, their families and friends. A funeral service will be held on Monday 10th February 1997 at the South Chapel of the Woronora Crematorium at 1.30 pm.

No flowers by request - donations may be sent to Cancer Research - full details are obtainable from the Divisional Office.

VALE, Bill Scott L 20870.

--Submitted by Max Bowey VK2AFE

VK2WI AND THE CENTRAL COAST FIELD DAY
VK2WI listeners please note: due to the upcoming Central Coast Field Day, weekend in that there will be no morning broadcast on the Sunday the 23rd. Instead there will be a broadcast on th evening of Saturday the 22nd, and the usual one on Sunday evening. The Saturday broadcast time will be advised next week (most likely 7.30 pm to allow for 80 metre propagation.)

ATTENTION AFFILIATED CLUBS
The Divisional Office has been receiving phone calls from around the state, requesting starting dates of courses and the name of the nearest organization running them. Secretaries of Affiliated clubs, would you please let me know either by mall or Fax urgently at the VK2 divisional office if and when your club is running a course also include a contact phone number that can be given out to these prospective amateurs.
--NSW Affiliated Clubs Officer, Ken Westerman VK2AGW Dunedoo.

DURAL COMMITTEE MEETING.
The Committee Meeting set down for today has had to be deferred until a later date, most likely next month. Many Committee members found that they had clashing activities.

DIVISIONAL ELECTIONS
The Elections for the 1997-1998 Council of the Wireless Institute of

Australia New South Wales Division will be held in association with the Annual General Meeting on the 19th April 1997.

Nominations for the council are now open and they will close at 12 noon on Saturday 8th March 1997. The Divisional Office will be open that day as well as it's normal opening hours, which will be given elsewhere in the broadcast.

Nomination forms are NOW available from the Divisional Office.
A special note for members.

Only ordinary members and honorary life members are eligible to vote in the forth coming ballot. Associate members are not eligible to vote in the ballot. An ordinary member is one who holds a "Certificate of Proficiency" of any level. An associate member, is one who does not hold such a "Certificate of Proficiency" - commonly called a shortwave listener. So any members who have doubts about their membership status are invited to contact the Divisional Office to confirm their membership status.

The Office's telephone number is (02) 9689-2417
The office's fax number is (02) 9633-1525
The Office's free call number is 1800 817-644
The Divisional Office's address is
109 Wigram Street Parramatta
P.O. Box 1066 Parramatta N.S.W. 2124

--Peter O'Connell VK2EMU, Divisional Returning Officer

The next examinations will be held at Amateur Radio House Parramatta on Sunday 16th February 1997. Candidates who have lodged applications are requested to report at 12 noon, and the exams will start as soon after that time as possible, but no later than 12.30 pm.

-- Eric Fossey VK2EFY Divisional Secretary.

WICEN NEWS
The Central Coast Amateur Radio Club Field Day, the biggest event of its type south of the equator, will be held on Sunday 23rd February, at Wyong Racecourse. Naturally, WICEN will have a display, in order to demonstrate the community value of Amateur radio, and both ideas and bodies are sought. If you can volunteer either or both, then please contact the Management Committee.

A new event on the WICEN calendar is the Oberon Car Rally, on the 11th October, organised by Alan VK2YYJ. Further information will appear in a later broadcast.

Next month sees the Central Coast meeting, on the 14th March. This is followed by the Wyangala Triathlon, in the Orange area, to be held on Sunday 16th March; enquiries are directed towards Robert VK2ZRJ. We expect to have further details in later broadcasts. Following this is the VRA Mid Year Conference, at Wombeyan Caves, on the weekend of 22nd-23rd March.

Events further away include the Watagan Mountains Car Rally, over the weekend of 19-20th April, for which Andy VK2XRX is the contact; around 20 people are required for this exercise. Later on is the Hawkesbury Emergency Expo, run by Alan VK2YYJ, over 16th-18th May; the Oberon Car Rally, also run by Alan VK2YYJ, on the 11th October; the Hawkesbury Classic Paddle is organised by Kevin VK2CKD over 18th-19th October and the annual Bungonia Cave Rescue will be on the weekend following, over 25th-26th October.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If there are any other regular nets then we'd like to hear about them.

WICEN (NSW) has a Web page, and the Uniform Resource Locator is: "http://www.nsw.wicen.org.au/". It is generously provided by the Macquarie University School of Mathematics Physics Computing and Electronics, and contains pointers to many emergency-related pages likely to be of interest.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

DX NEWS
JAMAICA, 6Y. 6Y0A will be active next weekend in the ARRL CW Contest from Ocho Rios, Jamaica.

BURUNDI, 9U. 9U5T from the city of Bujumbura during the ARRL CW Contest.

AMSTERDAM ISLAND, FT5Z. Eric, FT5ZG, operates his own station on Amsterdam Island and will be there for one year. Eric will try to be a regular on 7004 kHz at 1730z.

SEYCHELLES, S7. S79GN from Maha Island, February 12 through 19 on 160 and 80 meters using CW, SSB and RTTY. He may also be active for 2 to 3 days from Desroches Island.

ANTIGUA, V2. V26B will be active from February 12 through 19, (on HF presumably) using CW and SSB. and will also be found on RS12.

ANGUILLA, VP2E. VP2EV will be active the entire week before the ARRL CW DX Contest on 160 through 10 meters, as well as RS12.

BRITISH VIRGIN ISLANDS, VP2V. Jay VP2V/WB8ZTY will be active this week until Friday, will also be active in the CQ WPX RTTY Contest.

BURKINA FASO, XT. XT2AW from Ouagadougou will be on CW and SSB from March 28 through April 14.

COOK ISLANDS, ZK1. ZK1DI from the South Cook Islands, from 0530 to 0830z. He also plans some 160 meter activity soon.

--condensed from ARRL DX Bulletin 8, dated 6th February, 1997

Still with DX news, in the Division email box this week, we had news of...

A HONEYMOON WITH A DIFFERENCE
Rolf HB9DIF and his fiancee Manuela will soon be travelling from Switzerland to Sri Lanka, where they will be married. They will spend their honeymoon on Rasdhoo Atoll in the Maldives, where Rolf will be active on CW, possibly as 8Q7BV.

Hans DL8NBE will be joining them and he will be active on SSB, RTTY and CW, possibly with his old callsign 8Q7BE.

The honeymoon cum DXpedition will run from the 7th to the 27th of March, so listen out for those 8Q prefixes...

-- "some crazy Rolf, HB9DIF"

CLUB NEWS

The first meeting of the Radio Veterans Group for 1997 will be held, Deo Volente, on thursday, 20th February, from 11am to 2pm, at Amateur Radio House, 109 Wigram Street, Parramatta.

-- Franklyn Pain VK2DYP

WAVERLEY AMATEUR RADIO SOCIETY
Our next meeting is on Wednesday 19th February, being the 3rd Wednesday of the month. Laurie McIlree, VK2GPL, is coming along to explain how repeaters are set up and operated and bring us up to date on the latest developments of Fibre Optics

The first Saturday afternoon of each month is project day, so drop in on March 1st from 1:30 onwards and get involved in some practical work or just come along and socialise. Project day has proved most useful to a number of members by helping them fix rigs with faults or just to receive assistance in the operation of modern rigs.

The Society's clubhouse is located in Vickery Avenue, Rose Bay, off New South Head Road, next door to the Rose Bay RSL Club, where a number of us gather for a meal before the meeting.

--Simon Buxton, VK2EII, Club President

CASTLE HILL MILITARY RADIO COLLECTION

If you have enjoyed the recent series of technical tapes featuring equipment in the Castle Hill Military Radio Collection, why not visit the display at the Wyong Field Day on Sunday, the 23rd of February?

Equipment restored in the past 12 months will be on display, with some of it operating. Leaflets giving information and circuits will be available as usual.

If you have equipment, spares or manuals to donate to the collection please give Ian O'Toole a ring on (02) 9680 2112. Ian will have the trusty empty

trailer with him on the day to transport equipment back to Castle Hill.
Next week Ian will be listing the equipment to be on display.

--Ian O'Toole, Curator, Castle Hill Military Radio Collection

THE AUSTRALIAN NAVAL AMATEUR RADIO SOCIETY (A.N.A.R.S.)
Established for Radio Amateurs and interested SWL's who have a professional Naval or Maritime background, A.N.A.R.S. would welcome inquiries from serving and past members of the Royal Australian Navy, Australian Merchant Navy, RANR, WRANS, RANVR, Naval Reserve Cadets and Civilian Support Staff of the RAN who have an interest in Amateur Radio.

Membership inquiries are also welcomed from those who have served in any foreign Navy. Merchant Navy or Navy Reserves and who are now Australian citizens or have been granted permanent resident status in Australia, Foreign Amateurs with similar nautical background are welcome to apply for Associate Membership of the Society.

A.N.A.R.S. is affiliated with the WIA and the aims of the Society include:-

encouraging the hobby of Amateur Radio within the RAN and the Australian Merchant Navy

bringing together all radio amateurs and interested short wave listeners with a Professional naval or maritime background

cooperating with overseas naval/inaritime amateur radio organizations for mutual benefit

representing the Interests of Australian naval or maritime amateur radio internationally

Active A.N.A.R.S. amateur operators are resident in every state, the ACT and Northern Territory. Also included are offshore islands, New Zealand and some overseas countries.

Two 'Navy Nets' are conducted each week in the Novice segment of the 80 metre band:

Mondays on 3532kHz (+/- QRM) at 0930 UTC, CW mode
Wednesdays on 3620kHz (+/- QRM) at 0030 UTC, SSB mode

In addition two SSB nets are conducted every day on:
7075 kHz (+/- QRM) at 0400 UTC
1417SkHz (+/- QRM) at 0430 UTC

All are welcome to join the various nets.

For further Information on the Society and its activities please contact the Secretary A.N.A.R.S. in writing to 13 Brothers Street, DUNDAS, NSW 2117, or by phoning (02) 9638 3569 or EMAIL fayem@sydney.dialix.oz.au or alternatively call in to any of the "Australian Navy" nets where members will be only too pleased to assist you

OUR COMMON BONDS ARE THE SEA AND RADIO
"A.N.A.R.S. is AUSTRALIAN and proud of it"

GLADESVILLE NEWS
The first meeting of the Gladesville Amateur Radio Club. for this year will be held tomorrow night - the 10 th February - at 7.30 pm, at the usual venue, Number One, Birdwood Avenue, Lane Cove. Visitors are most welcome and car parking is available opposite the venue.

Are you going to the Central Coast Field Day? - Please set aside a few minutes to drop by the Gladesville stand to say hello or to inquire about our video tape lectures.

Contact with Gladesville can be made by mail to PO Box 48 Gladesviiie 2111 or by telephone to 02 9427 0530

A reminder that the Test Transmissions from Television Gladesville are at 7.30 pm on Wednesday and 7 pm on Friday and Sunday.

--Keith VK2ZZO - President / TV Co-ordinator.

AUSTRALIAN AMATEUR TELEVISION CLUB
THE NEXT MEETING OF THE A.A.T.C. Inc WILL BE HELD AS USUAL
ON THE 2ND SUNDAY OF THE MONTH IN FEBRUARY AT 109
WIGRAM ST. PARRAMATTA 1.00 PM - TODAY!!! IN 2 HOURS TIME
SPECIAL NOTICE TO ALL MEMBERS THE NEW 23cm ATV/SATELLITE
rx WILL BE AVAILABLE IN LIMITED NUMBERS, THIS HAS FULL TWIN
CHANNEL DEMOD THE NEXT BATCH WILL NOT BE AVAILABLE
UNTIL WYONG, S0 BE EARLY !!!

THE TECHNICAL DISCUSSION WILL BE ABOUT THE NEXT RX, BY VK2GIO.

ALSO A CHIT CHAT ABOUT THE NEW STANDARD TO BE
ADOPTED IN THE CLUB REGARDING ATV ON THE INTERNET, RE
USA, U.K, EUROPE ETC. COMMENTS ARE WELCOME, TO GET A
STANDARD ORGANISED. BY CADE OR BOB

WYONG TO BE DISCUSSED, FORMAT, TIMINGS, MANNINGS ETC.

BRIEF CHIT CHAT ABOUT RECENT TELEVISION SHOW IN TOWN
BY BERNIE

THIS MEETING IS AS USUAL OPEN TO ALL MEMBERS AND ANYONE
INTERESTED IN AMATEUR OR SATELLITE T.V.

NOTE: WYONG IS ON FEB 23 1997, 2 WEEKS AWAY - SEE YA' ALL THERE.

FOR MORE INFORMATION ABOUT ATV. CONTACT BOB THE
PUBLICITY OFFICER ON (02) 9587-3491 DURING NORMAL CIVILISED TIMES.

--A.A.T.C. Inc. Publicity Officer Bob Barnes

HORNSBY & DISTRICTS ARC.
The next meeting is the mid-monthly, an imformal get together on the 11 - 2 - 97, the second Tuesday of Febuary, at 8:00 pm. all are welcome.

Now the festive season has past, the Club's meetings will be held, on the second and fourth, Tuesday of each month. At 8:00 pm. at the, Mount Colah Community Centre, Pierre Close, Mount Colah. (Near the Eastern Entrance to the Railway Station.) If you have an interest in Radio or Electronics, come along to one of our meetings, and discuss, what you would like to achieve, out of your interests.

Training classes commence, on Thursday, 13th. Febuary 1997. at 7:15 pm., In a hall at the corner of Paimerston Rd. & Burdett St. opposite the Hornsby Hospital. For more information phone, Tony VK2BTL on 9487 3383.

A reminder, the club net is on every Monday night, at 8:00 pm. on VK2RNS. The frequency is 147.250 with a positive offset. Please feel free to join in. All are welcome, Listeners set your scanner to 147.250. Should you wish to know more about the Club, or its activities, please write to:- H.A.D.A.R.C at Post Box 362, Hornsby, 2077. or contact the Publicity Officer, John on 9807 2490.

--Submitted by John W Turner VK2WRT - Publicity Officer.

SUMMERLAND AMATEUR RADIO CLUB ANNUAL GENERAL
MEETING, NUMBER 38, IS ON THIS AFTERNOON AT THE
CLUBROOMS, 412 RICHMOND HILL ROAD, GOONELLABAH. 2PM.
REMEMBER - IT IS YOUR CLUB, AND YOUR CLUB IS WHAT YOU
MAKE IT!!

ALL MEMBERS ARE REQUESTED TO COME ALONG, BE PREPARED
TO NOMINATE FOR OFFICAL POSITIONS ON THE COMMITTEE AND
TO HAVE A VOICE IN THE FUTURE ACTIVITIES OF YOUR CLUB.
ANY PERSON INTERESTED IN ELECTRONICS, RADIO, OR
COMPUTERS, IS VERY WELCOME TO ATTEND.

REFRESHMENTS WILL BE AVAILBALE AFTER THE MEETING.
SEE YOU THERE.

--GRAEME, VK2GJ, PUBLICITY OFFICER.

For those who use, or try to use the Fishers Ghost PMS, it has been relocated to another frequency..144.925 .. ON A TRIAL BASIS !!
This being done so many of our members and the potential users who are unable to access the system now have the availabilty of using the ROSE Network....

All are most welcome to drop into the system, as the club is always happy to receive reports or info on how it can be improved...

Commencing on Monday Evening the 10th of February at 7:00 pm ...Jack Heath VK2DVH will be commencing a projects night program at the club rooms.

This will be initially for an 8 week period, and will be on each Monday evening for those wishing to build, or learn more about building and repairing home brew projects..

The projects evening will commence at 7:00 pm and finish around 9:00 pm... If your keen on....or want to learn more about home brew equipment then these nights are for you..

Due to the great response for the Sunday classes, the Club will now hold these each Sunday morning commencing at 9:30am ... These classes are also held each Wednesday evening commencing at 7:00pm for those wishing to upgrade or wishing to obtain a licence in Amateur radio... If someone you know wants to study for a licence, or an upgrade then please let them know..

The Club rooms are located at the Campbelltown High School Chamberlaine St Campbelltown...

Don't forget the 18th of February is the club's AGM... Commencing at 7:30pm... Good to see so many members rejoined, and quite a few new members also.. If you do wish to join on the evening of the AGM..please remember this will only be done AFTER the meeting as it quite hectic prior to the AGM taking place.. The reason : Books are complete for the handing over to the new treasurer and secretary so they may start with a clean slate...

In closing I would like to thank all the committee.. and those members and non members who gave up their time to help the club in all it's endeavours. Such as helping with JOTA, Rebuilding the clubs shack, the lecturers, and the education crew for helping others into Amateur Radio...

Thanks again all..

-- Jim VK2LJZ Club Secretary

THE ILLAWARRA AMATEUR RADIO SOCIETY WILL BE STARTING 35 YEARS AS AN AMATEUR RADIO CLUB THIS YEAR.SO IF YOU HAVE NOT BEEN TO A CLUB MEETING FOR SOMETIME .WHY NOT COME ALONG TO THE FEBRUARY 11TH MEETING AND MEET SOME OLD AND NEW FRIENDS.THE MEETING WILL START 7.30PM S.E.S BUILDING MONTAGUE STREET NORTH WOLLONGONG,YOU COULD BE THE WINNER OF A D.V.M. AFTER THE MEETING THERE WILL BE A CUPPA AND RAG CHEW.IF YOU WOULD LIKE MORE INFORMATION ON THE CLUB OR WISH TO RE JOIN GIVE BRIAN A CALL,AFTER 4:30PM MOST DAYS,ON 042 672296 OR COME UP ON THE CLUBS HAVA CHAT NET MONDAY NIGHTS FROM 7:30PM ON 146850.

--BRIAN VK2UBF I.A.R.S PUBLICITY OFFICER.

THE NEXT MEETING OF THE LIVERPOOL & DISTRICTS AMATEUR RADIO CLUB WILL BE HELD NEXT WEDNESDAY THE 12th OF FEBRUARY AT THE USUAL MEETIING PLACE, THE SCOUT CAMP ON CANBRIDGE ROAD GLENFIELD,

THE CLUB ACTIVITY ON THIS NIGHT WILL BE ANOTHER TUNE UP AND CALIBRATION SESSION.

IF YOU WANT THE DEVIATION AND POWER OUTPUT OF YOUR SMITTER CHECKED AND ADJUSTED, THEN JUST BRING IT ALONG.

EQUIPMENT WILL ALSO BE AVAILABLE TO CHECK THE
CALIBRATION OF YOUR TEST EQUIPMENT SUCH AS MULTIMETERS
AND FREQUENCY COUNTERS.

PLEASE NOTE THAT NO REPAIRS WILL BE DONE. DON'T FORGET
NEXT WEDNESDAY AT 7.30 P.M. FOR A PROMPT 8.00 P.M. START.

--SUBMITTED BY GARY VK2TSR FOR THE LIVERPOOL & DISTRICT ARC.

3149. Re: CW subbands again, was Re: The ARRL Letter Vol 16, No 5

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-08 00:00:00 UTC
From: faunt@netcom20.netcom.com
Message-ID: <FAUNT.97Feb7193035@netcom20.netcom.com>
Source record: 205156

There are voluntary band "considerate operator" band plans, but
they're hard to get a definitive set, and there are so many
exceptions. For instance, on 40M, RTTY is at the high end of the
non-phone section, but if you want to work Europe, you have to get
down where they are. The UK bandplan calls for "digimodes" between
.035 and .045, and phone may be used above .040.
If people would be considerate of each others desires, we'd all do
better.

What CW subbands? There are NONE on HF. CW can be used
everywhere on HF. As has been pointed out on numerous
occasions, there are no EXCLUSIVE CW HF
subbands.

The fact that these problems exist debunk the "CW lid filter" theory. It is more an assualt on the absolute arguments the procode folks. Drew likes to do this and what he reports is true. If as much energy was put into getting these bad stations off the air as is expended in carping about code/nocode the service would certainly benefit.

Jerry

3151. Feedback on Hygain verticles!!

>
>Are you suggesting that eliminating CW testing for HF will improve
>public perception better than promoting our hobby to the public?

Yes. Public promotion is also something which needs to be done, but
the substance behind the promotion has to be attractive and relevant
to the expectations of the intended audience. Regardless of how much
promotion one might do, it is unlikely one could sell the merits of
developing expertise with buggy whips as a requirement for a driving
license today, even if there are still substantial numbers of Amish on
the roadway.

>Also, CW accounts for at least 40% of amateur HF operating. The skill
>is not obsolete.

The skill is technically obsolete, just as the skill of hand hammering
iron is technically obsolete, or the skill of hand whittling furniture
is technically obsolete, or the skill of hand looming cloth is technically
obsolete. Just because a minority of hobbyists still ocasionally do these
things for amusement, doesn't make them any the less technically obsolete.

These obsolete methods are not technically competitive with better
machine methods. Just as there are better machine ways of accomplishing
those tasks, there are better machine ways of accomplishing the
communications task of text transmission. These methods are widely
known and widely used, in fact overwhelmingly dominantly used, outside
hobbyist circles (and even inside hobbyist circles they have gained a
strong following). This gives the hobbyist hand methods of text
transmission both the appearance and the reality of being technically
obsolete. That a minority of hobbyists cling to these obsolete methods
is no proof of their lack of obsolescence.

Now I'm not suggesting that the hand methods of text transmission must
disappear. As long as they offer amusement to some people, and don't do
any substantial harm, there is no compelling reason to ban their practice
by those wishing to use them. But demonstrating skill in these hand methods
of text transmission is certainly an obsolete requirement for obtaining
permission to use better methods of communications.

The FCC implicitly recognized this by eliminating the requirement to certify a certain number of hours of *use* of these hand techniques as a license renewal requirement over 20 years ago. That recognized the lack of necessity of maintaining a competency in these hand techniques as a requirement of licensing. The FCC has also explicitly recognized this lack of necessity by removing any requirement at all for demonstration of these hand techniques for licensing above 30 MHz. It is past time to explicitly take the final step and remove this unnecessary requirement completely. As it stands today, it is no more than an initiation rite, and maintaining initiation rites is not the legitimate business of government regulation.

Now private parties may maintain initiation rites if they wish. The ARRL could require a manual Morse exam as a condition of membership, for example, though it would likely make their position as the largest membership organization in amateur radio decline sharply. But government regulation of *public* resources is not the appropriate place for such activities. Not only is it illegitimate, it has become actively harmful to the goals of the amateur service.

Of course, due to treaty requirements, the proper forum for removing this illegitimate initiation rite is WRC-99. Petitioning the FCC will do no good until the treaty is changed. This is a procedural matter, however, and does not change the substance of the argument that manual Morse testing has become a mere initiation rite and not a fit subject for government regulation.

The proper action at this moment is to express our views to the relevant WRC-99 working group at the State Department dealing with the US position on S25.5. The ARRL has spoken (unwisely), and that position will win by default if those disagreeing don't make their views known (rather quickly now, the US position will be set *this* year). Interested persons in other countries should take similar action in regard to the relevant agencies of their governments. Don't be fooled into thinking you can wait until 1999. The conference itself is a mere formality. The actual national positions are being determined *this year*.

>100.1247660636 cm cable that is 428 1282.400 full wave lengths.
>
>Whew! I'm I way off here? Thank you. - Chris N8UDK

If changing cable lengths changes output power, that indicates
a serious mismatch condition. The duplexer is not presenting
a 50 ohm non-reactive load to the cable. The cable won't have
a 1:1 SWR, thus it acts as a transmission line transformer.
This will change the impedance seen by the transmitter to
something which either lets the transmitter put out its rated
power or to something which does not let the transmitter put
out its rated power, depending on cable length.

This is a very undesirable condition. The *correct* fix is to
get the duplexer tuned to present the proper load so that the
cable SWR will be 1:1. Adjusting cable length to compensate is
a kludge. The kludge can work, but it is likely that the poor
duplexer tuning will still cause other problems, such as
receiver desense.

The correct formula for determining cable lengths in terms of
wavelengths is

cable wavelength (meters) = velocity factor * 300 / F (MHz)

For non-airline cables, velocity factor will be substantially
removed from unity, so it cannot be ignored. For example, some
coax has a velocity factor of 0.66 and that will have a large
effect on the resulting cable length for a given effective
wavelength. Look up your cable in the manufacturer's data
sheets and determine its velocity factor before attempting
to compute an effective length.

There is no assurance whatsoever in your situation that a
halfwave (effective) or quarterwave (effective) line length
will correct the mismatch condition. In fact it is almost
certain that it *will not*. It is physically impossible to
match a non-50 ohm load to a 50 ohm source using a length
of 50 ohm cable (but you can do it with a non-50 ohm cable).
You can sometimes transform the load impedance to something
the transmitter will tolerate, but it will not be 50 ohms,
and it will not be non-reactive.

Note, it is possible that the duplexer is fine. It is possible
that the cable is defective, or that a connector has been installed
incorrectly. Either of these things can cause the same sort of
symptom. Adjusting cable length doesn't address the real problem
here. Identify and correct the real problem, don't kludge it.

Be systematic in troubleshooting this problem. Put a good non-reactive
50 ohm dummy load directly on the transmitter and make sure it will
make rated power. If it doesn't, you've got a transmitter tuning problem.
Now move the load to the end of the cable you've been using to connect to
the duplexer. It should still indicate rated power (minus normal cable loss).
If it doesn't, you've got a cable problem. If it does, you've got a duplexer
problem. If the duplexer is at fault, get it properly tuned on a network
analyzer to provide a 50 ohm non-reactive termination to the transmitter.

Note, a highly reactive antenna load, or a highly reactive receiver
termination, can reflect back through the duplexer and cause it to
present a reactive load to the transmitter, even if the duplexer is
properly tuned. Make sure your antenna is presenting a 50 ohm load,
and that your receiver is too. (Test by substituting known good
dummy loads at the antenna port and the receiver port of the duplexer.)
Once you isolate the problem, fix that, don't kludge it. In a proper
50 ohm system, cable lengths won't matter (except for cable losses, of
course, and those will be minor for short high quality cables).

In article <33004b0e.9252263@news.erols.com> frussle@erols.com (Jake Brodsky) writes:
>
>Here is what I sent to my representatives in Congress. Don't sit and
>cuss at the dark. Light a fire! Those of you who posted all those
>rantings and ravings would be better off telling your Congressional
>representatives what you think than commiserating with your friends.
[big snip]

Your otherwise well reasoned letter would be more compelling if you
knew how to spell ridiculous. That repeated misspelling was so jarring
as to detract from your message.

Now I don't normally engage in spelling flames, but when it hurts the
effectiveness of your message, you've got to become more conscious of
it. Letters to Congress are one area where it does hurt.

Gary

Dear Fellow Amateur,

An Internet Web Server devoted entirely to Amateur Radio and associated hobbies.

If you would like a home page of your own or for your Radio Club it's absolutely FREE and will always be FREE.

This is my private computer system with the Server on a T1 hi-speed network. It's a hobbie for me
just as Ham Radio is and I'm glad to share my system with everyone.

This is what you'll get:

E-mail account that you can use locally or have forwarded to your regular account

Example: K3TKJ@qsl.net , NE3Y@qsl.net , YOURCALL@qsl.net

FTP privledges

Telnet privledge (after you convince me you need it)

Your own personal Web site....Try these working pages now.

http://www.qsl.net/k3tkj
http://www.qsl.net/ne3y
http://www.qsl.net/k3ap
http://www.qsl.net/n3wdl

Here are the rules:

1) NO COMMERCIAL USE!

2) I'm not going to write the page for you. Isn't it time you learned something new?

3) You have an Amateur License.

That's it.... If you want to try it signup at http://www.qsl.net

Need more info? E-mail: k3tkj@qsl.net

73,

Al Waller K3TKJ
Laurel, Delaware

SUNNYVALE VEC FREMONT TESTING DIVISION

Time & Date

All amateur tests, Novice through Extra, are given in Fremont, CA., on the first Tuesday of every month starting at
7:00 P.M. Walk-ins are accepted, no appointment is needed. Applications for testing will be accepted up to 7:30
P.M., at which time the test session will be closed. Click here for Fremont test dates.

Test Location

Testing is conducted in the basement of Firehouse #4, which is located in South Fremont at 1000 Pine St. (Corner
of Pine and Paseo Padre Pkwy)

What to Bring

1.$6.00 (Cash Only). No checks will be accepted.

2.Two forms of identification. (One ID must have a photo).

3.If you have a current amateur radio license:

Bring your original* amateur license and one copy. We must see your original license. Either your original
license, or a copy thereof must be attached to your form 610 when it is submitted to the FCC for
processing.

4.If you have a CSCE, (Certificate of Successful Completion of Examination):

Bring the original* CSCE and one copy. We must see your original CSCE. Either your original CSCE, or a
copy thereof must be attached to your form 610 when it is submitted to the FCC for processing.

5.A pen and a pencil.

6.Calculator, (optional). If your calculator has programable memory; when asked, you must show the VE's
that the memory has been cleared.

* If you do not bring your "ORIGINAL" amateur radio license and/or CSCE you will not be allowed to
take any exams.

Morse Code Test

Code tests are given using the Farnsworth method:
20 WPM @ 23 WPM, 13 WPM @ 18 WPM, 5 WPM @ 16 WPM. Characters
are sent faster, with more space in
between each one, which is easier to copy at slower speeds.

For more info check: http//www.ccnet.com/~teixeira/W6IQ.html/

Sounds like she was a grand old person and a credit - which will be
missed - to HAM radio.
Many of the great old YL's have gone now - including W7KOY, Gert Pond,
and W7ESA "Dorothy Rose" Dottie Brown. They are sorely missed!

Hope I don't set off some 'POSTER COUNTER' here tonite. Actually, I liked the ARRL tapes the best. There is only one thing that I found wrong (at least to me) with them. They need to be played backwards. Huh? Well not exactly backwards in the Beatles, Paul is dead sense. But I retaped (admission here) the ARRL tapes with the highest speed first, then the lower speed next. I would start out at the highest speed for 2-3 minutes, drop a gear and copy the next speed for 2 - 3 minutes, then wind up listening to the 'needed speed + 1' for the last 10 minutes. Twice a day, for a month and did the 20 wpm on the first try.

Incidentally, I hadn't done code in probably 15 years when I did it. It took me 242 hours (logged) of listening to cw in order to get from 5 to 13 using the old 5 then 6 then 7 then 8 etc, method. When I restarted at 13, I never dropped back. Within a week, I was as good (not too) as I ever was. Actually, code can be fun when you don't have any pressure to do it. Get on the air, there is always some one who will work with you.

>Any difference in performance in using RG-8 50 ohm coax
>to RG-8 52 ohm coax.

I think it may be a labeling problem. RG-8 is designated as 52 ohms. The difference between 'types' of RG-8, like mini-8, 8 foam, 8 poly, etc is well documented in several places including the 1996 ARRL Handbook. Loss is measured in db and 3 db worth of loss is equal to approximately on half of your available power.

Pull TEEREV.ZIP off of the ARRL BBS or ftp site, or oak.oakland and see a comparison of coax's to power to length.

JAS,

I think you are confusing 'public broadcasts' with the 'Federal Privacy Act'. Would you like for everyone to listen to YOU and your banker, doctor, lawyer, or priest? Now that's Scary.

> two state modulation.

Just to toss some thoughts out there... Morse code is basically a
four-symbol, variable length code set. The four symbols being dots,
dashes, letter-spaces and word-spaces. If you pass it through the
integrate'n'dump you'll get something like QAM (4 Amplitude levels - I
think I've got the right name) offset by about half a dash pulse of
integration.

It's not a nice, "predictable" digital-type signal, but you do have leading
and trailing edges to synchronize on every dash and dot. What may help is
to pass the raw audio through some noise filtering, then pick off the
edges. You can always make the software more intelligent, have it adapt to
some of the mutual information/common letter and number combinations.
After all, CW conversations are rarely about anything more than the
weather, right? ;-)

Does this help any?

Andrew.

3180. The only sex in ham radio (fat boy you still here?)

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-09 00:00:00 UTC
From: Burt Fisher <burtfisher@geocities.com>
Message-ID: <32FDC6B3.3E64@geocities.com>
Source record: 205032

Subject: The Sex life of an Electron (Innuendo but not offensive)
This is an old, old joke by Eddie Currents.

One night when his charge was pretty high, Micro-Farad decided to seek out a
cute little coil to help him discharge. He picked up Milli-Amp and took her
for a ride in his Megacycle. They rode across the Wheatstone Bridge and
stopped by a Magnetic field with flowing currents and frolicked in the sine
waves. Micro-Farad, attracted by Millie-Amp's characterisic curves soon had
her fully charged and proceeded to excite her resistance to a minimum. He
gently laid her at ground potential, raised her frequency and lowered her
reluctance. With a quick arc, he pulled out his high voltage probe and
inserted it in her socket, connecting them in parallel. He slowly began
short circuiting her resistance shunt while quickly raising her thermal
conductance level to mill-spec. Fully excited, Milli- Amp mumbled
"OHM...OHM...OHM" With his tube operating well into class C, and her field
vibrating with his current flow, a corona formed which instantly caused her
shunt to overheat just at the point when Micro Farad rapidly discharged and
drained off every electron into her grid. They fluxed all night trying
various connectors and sockets untill his magnet had a soft core and lost
all of its field strength. Afterwards, Milli-Amp tried self-induction and
damaged her solenoids and with his battery fully discharged, Micro-Farad was
unable to excite his field. Not ready to be quiescent, they spent the rest
of the evening reversing polarity and blowing each others fuses.

BUT WAIT!!! Theres M O R E !

Micro was a real-time operator and dedicated multi-user. His broad-band
protocol made it easy for him to interface with numerous input/output
devices, even if it meant time-sharing. One evening he arrived home just as
the sun was crashing, and had parked his Motorola 68000 in the main drive

(he had missed the 5100 bus that morning), when he noticed an elegant piece
of liveware admiring the daisy wheels in his garden. He thought to himself,
"She looks user-friendly. I'll see if she'd like an update tonight." Mini
was her name. She was delightfully engineered with eyes like COBOL and a
Prime mainframe architecture that set Micro's peripherals networking all
over the place. He browsed over to her casually, admiring the power of her
twin, 32-bit floating point processors and enquired, "How are you,
Honeywell?" "Yes, I am well," she responded, batting her optical fibers
engagingly and smoothing her console over her curvilinear functions. Micro
settled for a straight line approximation. "I'm stand-alone tonight," he
said. "How about computing a vector to my base address? I'll output a byte
to eat, and maybe we could get offset later on." Mini ran a priority
process for 2.6 milliseconds then transmitted 8K. "I've been dumped myself
recently, and a new page is just what I need to refresh my disks. I'll park
my machine cycle in your background and meet you inside." She walked off,
leaving Micro admiring her solenoids and thinking, "Wow, what a global
variable. I wonder if she'd like my firmware?" They sat down at the process
table to a top of form feed of fiche and chips and a bucket of Baudot. Mini
was in conversational mode and expanded on ambiguous arguments while Micro
gave occasional acknowledgments, although in reality he was anyalyzing the
shortest and least critical path to her entry point. He finally settled on
the old,'Would you like to see my benchmark
routine?' but Mini was again one step ahead. Suddenly she was up and
stripping off her parity bits to reveal the full functionality of her
operating system software. "Let's get BASIC, you RAM," she said. Micro was
loaded by this stage, but his hardware policing module had a processor of
its own and was in danger of overflowing its output buffer, a hangup that
Micro had consulted his analyst about. "Core," was all he could say, as she
prepared to log him off.
Micro soon recovered, however, when Mini went down on the DEC and opened her
divide files to reveal her data set ready. He accessed his fully packed

root
device and was just about to start pushing into her CPU stack, when she attempted an escape sequence. "No, no!" she cried "You're not shielded!" "Reset, baby," he replied, "I've been debugged." "But I haven't got my current loop enabled, and I can't support child processes," she protested.
"Don't run away," he said, "I'll generate an interrupt." "No, that's too error prone, and I can't abort because of my design philosophy." Micro was
locked in by this stage, though, and could not be turned off. But Mini soon
stopped his thrashing by introducing a voltage spike into his main supply
whereupon he fell over with a head crash and went to sleep. "Computers!" she
thought as she compiled herself. "All they ever think about is hex."

What others tell me:

Hello Burt,
It is rather tragic to see the juvinile garbage coming from the USA in many area of Internet, including the amateur sections. Reading the comments from various so-called amateurs on the amateur newsnet leaves oh so much to be desired. The garbage is all and only from the US. I just picked out you by chance to reply. I would like to inform you and all your tunnel-vision US amateurs that a greater percentage of "hams" around the world work "barefoot" - 100 watts and quite often with not much more than a dipole and/or long wire.

...Calling CQ-DX is quite common on all international HF bands. It is quite possible because of all the drivel eminating on the "ham" bands in the US, you may rarely get to hear the rest of the international amateur fraternity. Perhaps - and I would be surprised if what I am to say were not true - too many American Amateurs treat the radio hobby as CBers treat and violate the CB bands....!

It is indeed unfortunate in that too many of your compatriots fail to grasp the fact that the whole world sees (Internet) and hears (amateur radio) so much drivel originating from the USA. While there are many good and highly skilled amateurs in the US, there would appear to be a majority who are nothing much better than the worst type of CB operator. During the Second World war there was a well known saying...."When the British were bombing the Germans ducked for cover. When the Americans bombed everyone but the Germans ducked." It would seem that saying still applies today. When US operators are on the Net the rest of the world turns off. And when you are on the Amateur Bands.....! Need I say more! You have my full permission to insert all my comments on the BBS Nets used by yourself and other US amateurs.

Regards, GARRY (ZL2JW) Net address: Winthrop_G@Kosmos.wcc.govt.nz

In addition to the others already mentioned, let me add
the discontinued Icom W2A which may be had for about $300
on the average at ham fairs, or rec.radio.swap. It sports
two separate displays for each band (VHF vs UHF).

One major problem with this all Jake. The law enforcement folks are against any form of encryption on any form of communications. They figure that it will make their job of catching the crooks too hard as they will not be able to eavesdrop on the conversations in the event that cell phones, cordless phones and the public radio service go encrypted. Talk about a catch 22 situation. The biggest group of "illegal wire tappers and listeners" is the law enforcement crew themselves. They have the national security group convinced that crime will run rampent should cell phones be encrypted. The way it is now they don't need a court ordered wire tap to listen to the local pimps set up their girls for work or the local crack salespersons make sales via the cell phones. That is what the casual listener has to face in the future. Big brother has no use for those that wish to listen to him in action or to stiffle his access to the private sector via easy listening radios. He just wants the private sector to think that the phone conversations are private and

secure no matter what form of communcations is used. That way foolish folks say foolish things in the clear for big ears to hear.

Fred

I may not always agree with what you say. But I will defend to the death your right to say it.

Careful, Mikey. You're teetering dangerously close to that never-never land of libel and defamation-of-character by implying that I have engaged in illegal transmissions on 75m.

For the record: I do not own, nor have I ever owned any equipment capable of transmitting on the 75m amateur band. Even if I DID have the proper equipment and grade of license to operate there, I would have no desire to transmit there and involve myself in the mess that has apparently manifested itself on 3984.5 for several years.

My interest is strictly as a listener, and my Sangean ATS-803A does that perfectly well. Sorry, you strike out on this one.

In DL, they call them "Short Term Permits" in German, though the licensing
authority then incorrectly as "Short Term Licenses"...

It is so much fun to forward such postings to the IRS. Where else do these
guys find voluntary statements about undeclared, non-earned income other
than on the internet?

If common sense does not make those shrink heads see the futility and the
criminal quality of their postings (Panzi schemes, and MAIL FRAUD), maybe
some IRS audit will :)

Maybe I should start forwarding such crap to the U.S.Postal Inspectors
site, too? The scheme involves the U.S.Postal Service, so MAIL FRAUD is an
issue in each and every case.

> have the equipment or knowledge to repair.

Quite frankly, Mike ... YOU are the one who's full of bullshit ... your
ignorance
continues to amaze me with each succeeding post of yours that I read.

Correction #1 ... the equipment (a source of hot air) is not rocket
science and doesn't have to cost thousands of dollars ... ask Gary about
his hot air source ...

Correction #2 ... the knowledge is something we should all be acquiring
in order to meet the goals of 97.1 and the ITU ... there is no excuse for
falling further and further behind the technological power curve.

Correction #3 ... the vast majority of parts are not custom, but rather
are entirely generic ... WRT ICs, most of what you'll find are more
general purpose "building blocks" and "merchant market" parts.
Full custom ASICs are rather expensive to develop and most ham
hear is sold in such small quantities that it's probably hard to justify
the development cost for very many true custom ICs ...

Correction #4 ... even if there is a truly custom IC, you can order the
part
and replace it yourself a lot faster than sending the rig in for repair (if
you
have a clue, that is)

> So, why not take your pompous-ass attitude and blow it out of the
> orifice at the other end of your body.

YOU should follow you own advice ...

You might try Mr. NiCd - 608-831-1082. I just picked up an FNB38 from
them for my FT-11 for $45, which is very reasonable. They handle
batteries for a LOT of equipment.

3202. NZ2T, the man behind the curtin?

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-09 00:00:00 UTC
From: Burt Fisher <burtfisher@geocities.com>
Message-ID: <32FE3102.270A@geocities.com>
Source record: 205054
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.scanner,alt.radio.scanner

It has taken a while to gather all the information about Bob Adler, NZ2T. I will not pass judgement on what his peers in North Texas said about him. He has seen fit to attack me with profanity and insults. Further he has violated his word in saying he will not send me any more messages nor would he post further on the ham newsgroup. So I do believe what follows based on how Adler has treated me.

Adler is running for Section Manager in a vote to be tabulated February 18. There is at least one other running against him. I am told that Adler wears an unusual ï¿½costumeï¿½, as in untucked jeans trying to be a ï¿½cool Texanï¿½, that Adler likes to bulldoze people in North Texas, that Adler thinks that only he has the right answers, that he claims to have degrees in education that no one has seen, that he spent a large sum of money sending over 4000 pieces of mail to get reelected SM, that every Wednesday he gets on the 145.19 repeater and ï¿½preaches to the massesï¿½, that Adler is truly an ï¿½Iï¿½ man, he is wholly self involved, that Adler claims credit for the work of others, he demands to be liked and to be loyal, that he has a mole in the ARRL headquarters (Rick Palm?) and that he claimed he was going to shoot someone in Calif.

I have received these comments from North Texas both by Email and direct phone conversations. Adler has threatened me as well. Do I think he has the guts to do anything, no. But this could get him so mad he actually comes here and does shoot me. My family has been informed of this but I do not scare easily. If Adler was a real tough guy (like a U.S. Marine) I would be more concerned. But I think he is more like the Wizard of Oz.

>science and doesn't have to cost thousands of dollars ... ask Gary about
>his hot air source ...

OOOhhh, I see a (half)witty rejoinder coming on that. To perhaps
forestall the need to reply to such, let me identify that source
of hot air. It is a Weller Pyropen Jr. It is an excellent inexpensive
source of static oxygen depleted hot air for SMD rework. SMD rework
is generally *easier* than thru-hole rework, if you learn a few simple
new techniques. It needn't even cost hundreds, much less thousands,
to become well equipped to deal with SMD technology. I carry my
rework kit in a coat pocket.

>Correction #2 ... the knowledge is something we should all be acquiring
>in order to meet the goals of 97.1 and the ITU ... there is no excuse for
>falling further and further behind the technological power curve.

Indeed. And VLSI makes understanding the workings of your radio on the
level needed for troubleshooting and repair much *easier* than in the
days of discrete component circuitry. For the most part, you only have

to isolate the problem at the block diagram level, because complete functional blocks are encapsulated in an IC. Then you just replace the faulty IC. Simple, quick, easy. The aggravating problems are the ones caused by intermittants due to faulty assembly. But there are known techniques for systematically tracking down and solving those problems too, and they were more common in equipment using discrete components anyway.

>Correction #3 ... the vast majority of parts are not custom, but rather
>are entirely generic ... WRT ICs, most of what you'll find are more
>general purpose "building blocks" and "merchant market" parts.
>Full custom ASICs are rather expensive to develop and most ham

Correct.

>Correction #4 ... even if there is a truly custom IC, you can order the
>part and replace it yourself a lot faster than sending the rig in for
>repair (if you have a clue, that is)

Also correct. When you send the rig in for repair, it spends the majority of the time sitting on a shelf in the repair queue. The tech only spends an hour or so actually working on it. You can eliminate that several week wait by doing the repair yourself. (Parts orders, at least from Icom and Yaesu, arrive quickly, the next day if you ask for FedEx delivery.)

The only time you get screwed with custom ICs is when the radio is long out of production and there are no repair parts to be had. Then you have to find a junker to rob the part out of, or you have to redesign around it, or you consign the radio to the spare parts pile and go buy something newer. (SMD parts are also generally easier to remove and reuse than thru-hole parts.)

In article <5dlhtk$baq@news.asu.edu> wmunsil@aztec.asu.edu (WILLIAM W MUNSIL) writes:

>Lernu la Internacian Lingvon, Esperanto.

I've been told that the two most popular (i.e., widely known)
artificial [non-naturally-evolved] languages are

#1 - Klingon

#2 - Esperanto

I'm also led to believe that the Esperantists aren't real happy about #1.

Certainly the Klingon Dictionary sells well.

Anyone with stats?

The instructions for doing this can be obtained from AOL directly at no
cost. It uses another ISP to log on via TCP/IP. Using this method,
AOL will only charge you $9.95 a month. You have to call them to set
it up. If you can log on to AOL the regular method, you can get the
instructions there.

Trying to prevent people from getting ripped off by some huckster.

Simple solution ... don't read them .. you'd have to be pretty
dumb to not be able to identify them from the subjects.

Otherwise, stop complaining and stop trying to tell others
what they can/cannot talk about.

Actually, as I come to think of it, the cose for many pro-coders
would be zero ... they have abundant hot air already.

Hmmm.... maybe that's why they're so resistant to modern
technology ... without the tube sockets or thru-hole parts
they probably have a hell of a time keeping gear working.
I'll bet if Mike had gear with SMD parts in it, the parts would
just fall off the boards ...

SB DX @ WW $OPDX.291
Ohio/Penn DX Bulletin No. 291

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 291
BID: $OPDX.291
February 10, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, W2GD, KB2PFP, N5FTR, NL7TB, KX9X, W0YG, EA3NY, G4BUE & DX News Sheets, G4ZVJ, JA3AAW, LU2BAR, LX1NO, PA3DMH, RA1QHJ and 9N2NOM/G3NOM for the following DX information.

3B8, MAURITIUS. The "DX News Sheet" reports Adriano, IK2GNW, will be active from here February 20th to March 1st as 3B8/IK2GNW. Planned activity will be CW/SSB and RTTY, with an emphasis on 160 and 80 meters.

3W, VIETNAM. There has been a report from Japan that 3W5FM was heard on TOPBAND. 3W5FM was heard calling CQ DX on 1826 kHz between 1420-1445z.

5K3, COLOMBIA (160 meters). Do you have Colombia confirmed in SSB on the 160 meter band?. If you don't here is your opportunity. The Colombian Amateur Radio League (Liga Colombiana de Radioaficionados) will operate the special callsign 5K3SB during the next CQ WW SSB 160 Meter Contest (February 21-23rd) in the multi-operator single transmitter category with full size dipoles. Look for them in the DX window (1830-1835 kHz). The event will be carried out on a Military Base near Bogota and has the offical approval of the Ministry of Communications. QSL card via HK3DDD. For any additional information on this operation, E-mail can be sent to Juan Marcos Rico at: ju-rico@uniandes.edu.co

8P, BARBADOS. Begin looking for Bob/AA1M, Jim/W1HL, Mike/W1USN and Tim/KA1MID to be active February 17-24th. Currently their callsigns are unknown, but the group plans to be active on all bands CW/SSB. QSL to home calls.

9G, GHANA. Steve, PA3GBQ, now active as 9G5BQ until early March, was heard on 80 meters. He was on 3514 kHz starting at 2200z and was heard as late as 2345z. He was also active on 18074 kHz around 1630z. For more info regarding his trip to 9G-land, a small Website has been set up and can be found at: http://www.igr.nl/~pa3dmh/9g5bq.htm

C5, THE GAMBIA. Brenden, G0UCT, should be active now through February 14th. He will be operating as C56XX.

FS, ST. MARTIN. Eddie, EA3NY, plans to be active during ARRL DX SSB Contest, March 1-2nd. He will use the callsign FS5PL during the contest and a few days before. Eddie will be Single/Op on all bands. Those interested in schedules for 80 or 40 meters, send E-mail to: ea3ny@tro.filnet.es

JD1, MINAMI-TORISHIMA. JG8NQJ/JD1 will be on the island until April 23rd, but activity will be limited due to his work schedule. Operations will be on 40-10 meters, and the best times to look for him are: 0100-0200z, 0600-0700z, 0930-1100z and 1300z. QSL via JA8CJY: Susumu Sanada, 5-4 Shin-ei, Toyohira, Sapporo 004, Japan.

OD5, LEBANON. Norby, LX1NO, will be visiting OD5 from February 13-16th. There might be a chance for him to be active from here signing his homecall/OD5 or with the call of his host Jamil, OD5PN. He will be active mainly on 20/15 meters in the morning or afternoon (probably his local time). QSL via LX1NO/LX9EG.

P4, ARUBA. Look for P40W to be active in the ARRL DX CW Contest as a Single-OP/High Power/All Band entry. Check 160 and 80 meters on the hour or half-hour during darkness. Operations will be around 025 kHz on all bands.

QSL INFO AND NEWS......
Buzz, N5FTR, reports that Rusty, KG4AU, has decided he wants to handle his own cards. So, all requests should now be sent to Rusty via KG4AN (not N5FTR), the Gitmo Club Station (Guantanamo Bay). Buzz states he is still receiving quite a few requests for cards, but he no longer has the logs and has sent Rusty all the blank cards. He knows this is expensive and an inconvienent for those who have seny for the card, but all he can do is return their cards with the information for the new routing....

Buzz, N5FTR, states he will now send cards to the outgoing QSL Bureau only one time a year for stations he is manager for. He has recently sent off a 16 pound box of cards in January, and will not send another until January of 1998. Those seeking a card through the bureau for one of the stations that he manages will have to wait a while longer, but it will be sent. Of course, those requesting a card and sending a SAE with the appropriate postage (or provisions for same) will receive their card as quickly as they can be confirmed. Buzz handles cards for the following active stations: ZD7JP, OA4DTW (ex-9M8BT and P29BT), V31ML, A41KJ, and V31SD. He also has the logs for the following stations that are now QRT or not currently active: 9M8BT, 9M8FH, 9M8LL, 9M8YL, Z21BA, ZD8KFC, PJ0/KB5DZP, V31BR, V47LDX, and J87CQ.

Bob, W7TSQ, reports that Gary, N7QXQ/HR6, (on IOTA NA-057) has decided that Bob will take on the new responsibility for his QSLs. PLEASE NOTE that Gary is just about out of cards in HR6, so more will be ordered when the next mailboat leaves for the states (in about a week). Most of those

cards will be shipped to Bob and a few to Gary. Gary will send Bob all the logs through March 31, 1997, which Bob should have in his hands about mid April. If you have sent cards already to Gary's Tampa address, please just wait!! If you have sent cards to NA7X (now a silent key), please send them again to Bob. For a direct response - a SASE or SAE plus postage is required. Cards received without, will be answered but via bureau!!! Bob states that Gary has been waiting for an HR6 callsign, but that seems like it may never come about.

RUSSIAN DX NEWS..... RA3SL reports that a Russian expedition to Waganiha Island (RR-22-01) will be active during the second half of February. The operators will be Nick/RA1QQ, Alex/RA1QY and Albert/RA1QHJ, and they hope to use the special callsign UE1QQQ. QSL via RA1QQ (Nick A. Smerdov): P.O.Box 24, Cherepovets, 162627, Russia. This island will be good for RRC-Award (Russian Robinzon Club)..... Also, Nick, RA1QQ, reports that the logs for 4K2QQ from AS-022, (1989-1991) will be closed at the end this year. If you do not have the QSL-card, please QSL again via RA1QQ.

USI ALERT (New WA island). Jim, W9HAO, has a sked with Phil, KJ7NS, on Maury Island, WA, on Tuesday, February 11th at 1700Z. When qualified, Maury Island will be WA-016S. Please allow Jim to make his sked on 14260 kHz before calling Phil.

V2, ANTIGUA (UPDATE). Last week we mentioned that Sean, KX9X, and Matt, NM9H, would be active from February 12-19th, CW/SSB and RS-12. But due to popular request, the team WILL also be active on RTTY from the Caribbean super-station V26B. QSL information, assuming they receive the callsigns they apply for, are as follows:
V26CW via NM9H - Matt Kolb, 1301 S. Second St., Gillespie, IL 62033 USA
V26NA via KX9X - Sean Kutzko, 2614 Greenleaf Blvd., Elkhart, IN 46514 USA

V5, NAMIBIA. Clarlie, W0YG (ex KY0A), left last Wednesday and should be once again active from here by the time you read this. He tells OPDX that the operation will start Monday evening (V5 local time), February 10th, on the top band. Charlie and others will be active as V51Z through February 17th. Operations will be on all bands, mostly CW, but with some RTTY on 20M only. They will concentrate on the low bands and the WARC bands. They will also be active in the ARRL DX Contest. QSLs for V51Z are via ZS6EZ.

V6, MICRONESIA. Sam, V63KU, is very active on 20 meters SSB and can usually be found active for a few hours between 14175 and 14200 kHz starting around 2100z. QSL via JA6NL at: PO Box 1679, Truk Lagun, Micronesia.

ZB2, GIBRALTAR. Andy, G4ZVJ, plans to sign ZB2/G4ZVJ from March 12-18th. Activity will be mostly CW on all HF bands. Suggested frequencies are: 1827, 3503, 7003, 10103, 14027, 18077, 24897, and 28027 kHz +/-. If there is a demand, Andy states that he will be active on RTTY. The ARRL DX CW contest falls during his stay. However, Andy states, "My QTH is on the "WRONG" side of the ROCK for North America ;)." QSL via G4ZVJ (Direct or via Bureau): Andy Chadwick, 5 Thorpe Chase, Ripon,

North Yorkshire, HG4 1UA, U.K.

ZC6, PALESTINE (Gaza and West Bank). Ray, 9M2NOM/G3NOM, informs OPDX that there is the possibility of an operation from the Gaza Strip (Palestine) from February 12-14th, using the call sign ZC6MPT. This will be followed by a visit to the West Bank February 14-16th, possibly using the operator's own callsign/ZC6 for callsigns. A small group of Japanese operators who are members of the recently formed IARV (International Amateur Radio Volunteers) will be setting off for Palestine on 11th February 1997. Their mission will primarily be Phase 2 of a humanitarian aid project which started last June in the Gaza Strip. They will be installing and commissioning VHF/UHF transceivers at the hospitals and in ambulances on the West Bank. Also, they will be holding discussions with officials about future amateur radio volunteer work. Due to the above commitments, there is only a 50/50 chance of operation at this time. The operators will be Yoshi JA1UT, Jiro JA3UB, and Teru JA3TXZ. They hope to assist the Palestine National operators to activate ZC6MPT from the HQ of the Ministry of Posts and Telecommunications in Gaza City. Operations are likely to be confined to 14 MHz SSB around 14190 kHz. Permission to operate from the West Bank is more difficult and is less likely. However, if permission is granted, it is likely that callsign/ZC6 calls will be used. QSLs will be handled by JA1UT. Ray, 9M2NOM/G3NOM, states "DXers are reminded that the European World Wide Award (Award Manager F6FQK Coucil of Europe)) does recognize Palestine as a separate country already, although DXCC accreditation is still not forthcoming."

Lets see Mike if someone disagrees with you on the code issue it's OK to slander them. I can remember some of the pin the coax threads but I don't remember a net confession of illegal acts by Drew. Is it so the code issue so important to you that the truth is a casualty.

Personally I think fast code testing is a load of crap and should be done away with. Further I think the "abuse" of the vaiver system is most amusing particularly the crying about it at hamfests.

Have a shot a me now.

Jerry

I own an Icom 735 with the electronic keyer option added. It uses the Mic Gain slider control pot as keyer speed control in CW mode. This is extremely oversensitive at speeds between 15 and 40 wpm. Apparently there is some sort of mod to fix this problem but I am unaware of it. If anyone has any info on this I would appreciate hearing from you.

Thanks, Larry VE6TN/W0

Announcing 8th ARDF World Championships 1997

Dear friends,

DARC, Deutscher Amateur-Radio-Club e.V. is proud to announce the venue of the

8th ARDF World Championships 1997

to be organized in Sankt Englmar - Germany according to the (provisional) time table as follows:

September, 2nd: Arrival of Teams, Observers, Visitors etc.

September, 3rd: Training and testing of equipment on 3,5 MHz and 144 MHz. Demonstration of Chipcard System to be used in both competitions. Official opening ceremony. IARU ARDF WG Meeting. Meeting of International Jury and Team Leaders.

September, 4th: ARDF World Championship 144 MHz competition. Meeting of International Jury. Honouring the ARDF World Team Leaders. ARDF WG Meeting.

September, 6th: ARDF World Championship 3,5 MHz competition. Meeting of International Jury and Team Leaders. Honouring the ARDF World Champions 3,5 MHz. Closing ceremony. Banquet (Hamfest)

September, 7th: Departure

Competition Center will be: Apart-Hotel Predigtstuhl
D-94379 Sankt Englmar
Fone: +49 9965 981
Fax: +49 9965 1465

The cost of accommodation including full board and ham fest will be approx. DEM 115,00 per person per day.

Sankt Englmar (approx. 900m asl) is a holiday resort in the Bayerischer Wald between Regensburg and Passau with easy access from the highway A3 exit Sankt Englmar (18km). For travel by train the nearest station would be Passau, Deggendorf, Straubing or Regensburg depending on the type of train you like to choose and the direction you shall be travelling. For those arriving by plane Munich is the airport to select. If you prefer to have us arrange for your transportation to Sankt Englmar please let us know. The fee for transportation from Munich to and from the competition center will be approx. DEM 100,00 per person. Exact arrival dates should be stated in the ENTRY FORM which we shall mail in due course to

societies returning the ⁄Letter of Intent⁄ enclosed.

As you know ARDF is an Amateur Radio Sport Activity for people of all age groups and as an outdoor activity good for health, fitness and well beeing. Although ARDF Championships on World, Continental or National level are occasions for the best of each society to show their fitness and capability, they offer - at the same t⁄me - excellent opportunities to study this favourable branch of Amateur Radio. We, therefore, urge all societies - not intending to field a team or even a single competitor - to consider sending an observer. Experienced staff members will be at her or his disposal to present an introduction into ARDF activities, equipment etc. for carrying out such activities later on in your country/society.

We are very much looking forward in meeting you in Sankt Englmar in September! Please do not hesitate contacting us if you should require more information at this stage. Latest information about the 8th ARDF World Championships 1997 can also be found on Internet at:

http://ourworld.compuserve.com/homepages/r_floesser/

: > >scanning and receiving TWO frequencies AT THE SAME TIME. I would like
: > >to use this feature to monitor both the repeater input AND output
: > >frequency AT THE SAME TIME.
:

Have the newer Ham rigs fixed the overload problem, such as the ICOM 2410 has, when listening to two frequenies within the same band?

At that time, I called ICOM, but the fellow I spoke to didn't even know there was a problem. Then I received a letter from ICOM thanking me for bring the problem to there attention and they would be working on a solution.

And does anyone know if ICOM ever mentioned a patch for the problem in the 2410, besides turning on the ATT function?

Thanks

Michael (shotgun@best.com)

If they are listenin to Fm radio, you can purchase a device from most any consumer electronics store that allows you to transmit CD audio (or whatever) to a nearby stereo. Most devices will allow you to tune them for the entire band. Simply attach a more resonant antenna, tune to the station they listen to, then pump the most absurd music into thier system. If they change stations, you can too.
Of course, interference of this type can get you into a heap of trouble.

For cassette players, a 25W mobile 440 rig, into a 4 ele beam pointed at the equipment in question will quiet that device fo a while. Although I do not reccommend this.

Story: I had a gal at work that cranked her headphones up SO loud, I could hear Stevey Wonder's harmonica down the hall and into the bathroom! She worked in the office just behind the wall, and behind me. She was using the cassette player on her walkman. First I brought a CB walkie talkie in, a 5W'er.. Did no good. Then one day I was trying to key up a local 440 repeater when I noticed the audio on her headphones quiet a bit on transmit. I placed the ht as close to the wall as I could, keyed it up, and it wiped the audio out completely. For some reason I could not hit the repeater that day, but sure was fun trying.

All in fun guys.
(or the info nazis will getch'a!)

> achieve a GOOD 13 wpm with a straight key is difficult and frustrating
> to do while the keyer is easier to send these faster rates...

IMO, the straight key is much easier for learning to send; 13 wpm is
neither fast nor difficult with a st. key. The iambic electronic is great
once you get up to 20 or so, and essential, again, IMO at over
25 or so wpm. However, many can send even to 35 wpm using the
straight key, but they are the real old timers.

Wonder what kind of key will be used for the proposed new sending
tests being discussed by the ARRL and its membership? Certainly
straight for the 10 wpm, and probably optional/bring your own for
the 20, if it stays at that speed for the Extra or CW endorsement
I've seen discussed as an alternative.

Anyway, have fun learning; and learning to send will really accelerate
your receiving practice as well. Somehow the reverse process seems
to help your mind really learn CW as a language.

I don't know about your source of hot air, but whenever I need a lot of
hot air I just read some of your postings.

>Correction #2 ... the knowledge is something we should all be acquiring
>in order to meet the goals of 97.1 and the ITU ... there is no excuse for
>falling further and further behind the technological power curve.

Less than 50% of 97.1 deals with technical matters. Greater than 50%
of 97.1 deals with communications-oriented issues. Your assertion that
technology is more important in amateur radio has no basis in reality.

>Correction #3 ... the vast majority of parts are not custom, but rather
>are entirely generic

Oh, you're certainly right. There are any number of caps, resistors,
relays, and other minor parts that are not custom. I've also never had
one fail either. The items that always fail in my radios seem to be
the CPUs. The last time I looked, they weren't available at U-CAN-DO
electronics. Special order from Yaesu. Assuming, of course, that is
really what the problem is, and its not a problem with that other
unmarked IC next to it.

Oh, I'm sure that an experenced, know-it-all BSEE (such as yourself)
with thousands of MBs of cross-reference data can find out what each
and every part it. Too bad most amateurs don't have access to the same
resources that you do. Maybe if you got on the radio more you'd know
that.

>Correction #4 ... even if there is a truly custom IC, you can order the part
>and replace it yourself a lot faster than sending the rig in for repair (if
>you have a clue, that is)

Tough to troubleshoot the part if there isn't any data on it, isn't it?

Dear Fellow Amateur,

An Internet Web Server devoted entirely to Amateur Radio and associated hobbies.

If you would like a home page of your own or for your Radio Club it's absolutely FREE and will always be FREE.

This is my private computer system with the Server on a T1 hi-speed network. It's a hobbie for me
just as Ham Radio is and I'm glad to share my system with everyone.

This is what you'll get:

E-mail account that you can use locally or have forwarded to your regular account

Example: K3TKJ@qsl.net , NE3Y@qsl.net , YOURCALL@qsl.net

FTP privledges

Telnet privledge (after you convince me you need it)

Your own personal Web site....Try these working pages now.

http://www.qsl.net/k3tkj
http://www.qsl.net/ne3y
http://www.qsl.net/k3ap
http://www.qsl.net/n3wdl

Here are the rules:

1) NO COMMERCIAL USE!

2) I'm not going to write the page for you. Isn't it time you learned something new?

3) You have an Amateur License.

That's it.... If you want to try it signup at http://www.qsl.net

Need more info? E-mail: k3tkj@qsl.net

For sale: Custom built 4CX1000 amplifier. Consists of separate RF deck, control panel, and PS. RF deck uses motor driven vacuum variable cap and roller inductor, with potentiometer feedback for LED indicators on control panel. Will cover 10-160 meters, has input pad to prevent overdriving, 15 watts in will produce approx 1500 out at 3000 VDC. Control panel has large meters for plate voltage and current, bias voltage and grid current. Power supply components included but not built. Blower included and mounts remote of RF deck. Could mount entire system in rack, or use RF deck remote of operating position.

Prefer trade for legal limit desktop amplifier or ??? Make cash offer.

MP>Doesn't it follow that the unit of time should be the Avis since Hertz
MP>is one over Avis???????????????

No. Since Avis is only number 2, it should be the second derivative
of advertising frequency. :)

A very long time ago when the science community proposed adoption of
Hertz as the name for frequency, several people counterproposed that
it should be the 'Steinmetz.' Using Charles Proteus Steinmetz in an
acronym would have eliminated any need to change...

3231. QSL info for ME33S?

3233. IC-02AT Problem! Any suggestions?

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-10 00:00:00 UTC
From: Mark White <markw@Iconnect.net>
Message-ID: <32FEE5B3.6171@Iconnect.net>
Source record: 204934

I was looking at an otherwise nice IC-02AT, serial number 368XX, modified for CAP (out of band xmit) and the following happened- both battery packs were stone dead so I gave one a quickie partial charge to verify the radio worked- it had a loose BNC which I had to re-tighten and solder- anyway the radio worked for a few minutes until the battery died so I popped the other one in. Upon doing so I got a strange screen on the LCD, basically all of the digits and other elements turning on. So I turned it off, and waited an hour for the original pack to charge up. Now it appears that the PLL isn't locking, but that is just my guess. The display works fine but will not tune anything except static, when you hold down the xmit button the "t" annunciator comes on but nothing else, then after a 3 second pause there is a "u" display which I am assuming to be an unlocked warning, but I don't have the manual either so I am guessing here too.
Has anyone else been here and done that? Any suggestions are helpful as I would like to have an idea as to the severity/hassle/cost of fixing this problem before I decide whether or not to buy this otherwise nice HT. Thanks for reading this far! 73's N9OHS

I have used Esperanto for HAM radio, penpals, genealogy, and music.
I have translated several items into Esperanto which have been published
including a Christmas Carol tape (I am a tenor soloist, too.), my
town's centennial brochure, The Mayflower Compact and the Mexican Hat
Dance (from the Spanish).

To equate a totally tested (over 100 years), truely inter-national
language with that other "movie tongue" is not only extremely silly
but demonstrates the total lack of knowledge on the part of the previous
poster.

Off the soapbox, now.

Say Carl, how much of the gear that you operate on the air did build yourself? The modern modes are fine for passing large files but are out-of-reach for most homebrewers today. If CW, SSB, and AM mean folks will still own and use a soldering gun, then live and let live.

Tom, myself and a few other repeater operator/owners would be interested in seeing TSARC get it's act together. My personal feeling is that the meeting should be somewhere in NNJ, as it would be the most convenient for all, LI folks, S. CT folks, SNJ like ourselves (I am in Forked River), etc...

Let me know of the progress, I'd like to attend.

A new and highly amusing development has manifested itself here on "The Zoo of Amateur radio." Apparently, "Ralph the Thief" (as he is referred to by his fellow 94-point-5'ers) has rigged a remote control transmitter in Big Al's neighborhood in Hickory, NC. Ralph is playing a tape loop of a BABY CRYING via remote control in an attempt to interfere with Big Al's reception. In retaliation, Big Al has taken to playing a tape loop of his own regarding his personal thoughts on Ralph and the transmission of the BABY CRYING! <g> As always, a .wav file of this is available upon request.

And the hits just keep on coming...

Drew, do you know the difference between propagation on HF and VHF?
Don't you realize that even here in the middle of the Pacific I
can hear what's going on on 80m? Don't you realize that if folks
are interested in the events on that freq'y they can tune in for
themselves?

Why not listen instead to the BBC or Radio Australia or the VOA or RSA
on your shortwave receiver, and gain something useful. Tune in a foreign
station to learn a new language. Tune in some code so you can practice
for your test. Expand your mind!

I broke down and bought the Yeasu FT-3000M... It is LOADED with
features including a CW-ID'er for ATS and crossband repeat..70 Watts,
Very happy with it...BUT..not good for mobile use in my opinion. The
menus are quite complicated, and some features require more than
reading the manual twice.. I like the remote operation also..Makes a
great 2 meter home rig.. Use it with a 20 Amp. switching supply..
Also available is a DVR unit extra.... N1QQ
Any questions e-mail me. rj3@earthlink.net

Garry ..... HEAR! HEAR!

Actully, my wife and I are both learning code, as well as many other arcane bits of radio lore, in order to go Marine Mobile on our boat later on this year.

Learning code, without fuss or fanfare. Wow, boys and girls ..... this is just so, so difficult!

I'd begun to worry, a bit .... why would I, or any other thinking and rational being, even want to communicate with some of the cretins who appear to take such unfathomable delight in showing their bums to all who could bear to look? In fairness, though, it does appear to be a relatively small group of nuts, cranks, and misanthropes ... and most of them seem to spend most of their conscious existence logged on, here and elsewhere. With any luck at all, this may well mean that they're much less likely to be encountered on any of the bands that we plan on using.

Perhaps we'll just talk to the rest of the world, per your kind information. At the end of the day, it's simply not worth letting them get your more than, at worst, mildly irritated.

Best Regards from the Pacific Northwest.

: >
: >Are you suggesting that eliminating CW testing for HF will improve
: >public perception better than promoting our hobby to the public?

: Yes. Public promotion is also something which needs to be done, but
: the substance behind the promotion has to be attractive and relevant
: to the expectations of the intended audience. Regardless of how much
: promotion one might do, it is unlikely one could sell the merits of
: developing expertise with buggy whips as a requirement for a driving
: license today, even if there are still substantial numbers of Amish on
: the roadway.

: >Also, CW accounts for at least 40% of amateur HF operating. The skill
: >is not obsolete.

: The skill is technically obsolete, just as the skill of hand hammering
: iron is technically obsolete, or the skill of hand whittling furniture
:

Qualifying your statement with 'technical' doesn't change the fact
that 'obsolete' is a poor description of the role CW skill has in amateur
radio.

Your colourful analogies are amusing, but do not contribute to the
discussion.

Could you be specific and identify benefits to the service that
rescinding CW testing for HF is intended to bring?

Why not get a group together to lobby the ITU for some HF allocations
for 'advanced mode' experimentation? It's possible such a request might
be granted considering how HF is being abandonded by other services
lately.

What about the 36,000 pounds which was given from RSGB funds to AMSAT last year, in a year when the RSGB was making a trading loss? That resulted in nobody's sacking. It jolly well should have!!

>he was replaced by peter kirby who is still there after three years.

After a lot longer than three years, methinks .... Because nobody any longer dares to grasp the nettle of calling salaried employees of the RSGB to account for their performance.

Cellular Telephone Security FAQ, v1.0

Originally posted to SCAN-L by Harold Peach.

Q. Isn't listening to radio communications, including cellular, an invasion of the participant's privacy?

A. No. The public's expectation of privacy when using unencrypted radios or cellular telephones is unrealistic and rooted in misconceptions about the nature of radio. Unlike wire and fiber optic mediums, which are privately owned and truly private, the radio spectrum is a public medium. Radio is public in that it is a public resource, like a park or street and, it is also public in that all activities carried out there are done so publicly. When people use commonly accepted methods of radio communication (whether analog or digital) that do not include encryption, there is no reasonable expectation of privacy. No law can change this fact. Communicating via radio is metaphorically the same as shouting across a crowded room.

Q. But don't the nation's telephone users have a right to privacy?

A. Yes. Callers have a reasonable expectation to privacy when using the telephone. However, when those telephone conversations move from private mediums to the public medium of radio the nation's telephone companies have an obligation to protect the content of those conversations through encryption. Only then does true privacy exist.

Q. How can congress act to ensure the privacy rights of the public are protected?

A. By passing legislation requiring telephone companies to encrypt wireless telephone communications. And, in the interim, by requiring that callers be warned when their privacy can not be ensured because their conversation will be traveling unencrypted over radio.

Q. Isn't encryption expensive?

A. Encryption is neither prohibitively expensive nor technically impractical. But even if encryption were not feasible, it does not change the fact that without it, radio communication privacy can not be expected.

Q. What good is encryption? Won't someone always be able to break any cipher invented?

A. It is true that for any technical method of concealing something there will always be someone who can break it, but this is a separate issue. When someone takes reasonable steps to encrypt their communication they have a reasonable expectation to privacy. When someone breaks that encryption and listens to the communication, they invade the person's privacy and violate existing laws. Not because they intercepted the signal, but because they broke an encrypted communication to which they were not a party. Metaphorically, this is equivalent to holding a glass to the wall or opening some else's mail.

Q. Even if we acknowledge that encryption is the best solution, isn't banning scanners a simpler way to solve the problem?

A. Scanners are radio receivers that can be programmed to listen for activity on several frequencies. Even if outlawed, it does not require an engineering degree or a high degree of electronic knowledge to build a radio receiver so we should never assume outlawing their manufacture or sale will prevent people from obtaining them. Even a television set can receive cellular telephone calls!But the question misses the point. Banning radio receivers to prevent the monitoring of radio communications is metaphorically equivalent to requiring people to ignore a public conversation taking place before them. Common sense tells you this won't work.

Q. Aren't radio hobbyists really just high tech voyeurs, eavesdroppers, or, as the Cellular Telephone Industry Association has called them, "electronic stalkers?"

A. No. Is it unethical to listen to two people yelling at each other across a crowded room? Is it voyeurism to observe the signals of a coach at a ball game? Radio hobbyists are ordinary people sitting on the sidelines of the public radio spectrum, watching and listening to the events unfolding before them.

Q. If the radio spectrum is truly public, why do we have licensing and auctions?

A. The Federal Communications Commission only licenses radio transmitters, not receivers. It does this to ensure the orderly use of a limited resource - the radio spectrum. However, neither licenses nor spectrum auctions convey ownership of a frequency or band, they only convey permission to transmit over the resource. Reception of radio signals does not interfere with the orderly use of a frequency or band so no licensing is required. Restrictions on radio reception traditionally occur only in countries with repressive forms of government.

Q. Do radio hobbyists support the Electronic Communications Privacy Act?

A. The ECPA protects many forms of communication from unauthorized eavesdropping. Everyone agrees with its provisions involving private mediums such as wire or fiber optic cable. It is only the radio provisions of the act, included as a "paper tiger" to primarily benefit the cellular telephone industry, that most radio hobbyists consider bad and potentially dangerous law.

3268. Re: directional vs non-directional/other

GTerrell@webtv.net wrote:

>
> Can some explain the meaning of
> directional vs. non-directional
> antennas? Why is this important to
> the dx'er?

I assume you are referring to "broadcast" (entertainment) radio stations, not "amateur" (ham) radio stations. I am a ham (not a broadcaster) so my answers may not directly answer your questions, but hopefully the following will be generally correct in the context of your interest.

Non-directional (also called "omni-directional) antennas transmit energy equally in all directions. The antenna can be considered to be at the center of a circle such as you might see if you dropped a pebble in the middle of a smooth pond. The strength of the waves would be the same in all directions from the antenna.

Directional antennas are constructed so that coverage is enhanced in a certain direction from the antenna, and diminished in other directions. This type of antenna might be used if we wished to concentrate our energy on a particular geographic area because that is where our intended audience is located. Rather than "waste" energy in nonproductive directions, all of our energy is beamed toward our intended audience. For any given transmitter power, our signal will now be louder in the desired direction, but weaker in the "back" of the antenna. This same technique is sometimes used to protect the coverage of another station on the same frequency ("channel").

> Also, why do some stations reduce
> their power at night? Is his a FCC
> regulation?

Yes, this is a condition of the license granted to the station. (I am not in the industry, so someone better qualified might jump in here to help out). Usually these stations are "local" stations and are on a frequency with many other "local" stations. Because the signals of MF broadcast stations tend to be heard at greater distances during night-time hours, they are required to reduce power between sunset and sunrise to prevent encroaching on the coverage areas of other stations on the same frequency.

I dunno. I think its pretty dull listening too, but so what? Are you
going to declare that cellular phone listening is dull, so we
shouldn't listen? Sometimes those "folks with no life" really do hear
some interesting stuff. Consider it like a fishing expedition, or
like channel surfing on TV. Most of that's pretty dull too, in my
opinion.

SOME PEOPLE JUST NEVER LEARN. YOU MUST BE A REAL GLUTTON FOR PUNISHMENT,
BURT.

You want me to go away? Not really. All you would have to do is shut up,
but you can't do that. Can ya sport?

I heard you are so ugly that a dog came up and tried to hump your face.

I also heard that you are so dumb, that you thought the "R" on a car
gear shift meant "RACE".

Now, I have about 2000 of these. If you like, I can have the fun of
insulting you and your family from now till the end of the century.
Frankly, I really do like pissing you off. Thanks for making SURE that I
know I am being successful in my endeavor to give you back what you so
justly deserve.

Have a nice weekend, sport.

Hi sports fans. The following is a message which I just received from Mr Charm. Now, let me make a few things CRYSTAL CLEAR to SOME of you:

1 - I am (also) the Section Manager here in North Texas. THAT is not WHO I am. THAT is merely ONE function I perform. I, and my team, feel we have done a pretty good job. There is, however, an election currently in progress. The membership will decide the merits of our claims; not Burt, and not one or two whining cowards. Since Burt has taken the liberty to publish my phone number, let me also indicate that all of that same information is published in QST monthly.

2 - Mr Fisher is a lying, cowardly, narcissist, who I envision as sitting in a big fat chair, smoking a cigar and contemplating his little kingdom. Mr Fisher seems to think that his is not only the "best" opinion on a subject, but is the ONLY opionion. It upsets him that anyone would DARE stand up to his sophomoric trolling tactics, and now that someone has he just does not know how to act. He can "back off" anytime he likes, but he just can't. IF, and I repeat If, there are a few people who think I, or anyone else, should have to grin and like Mr Fisher's antics, please know that I respect your right to your opinions. I, however, will exercize my option to mess with this clown all I like, thank you!

Now ... Here is the wad of b#$#$#^t Burt just tossed my way:

Subj: Now we will see who gets pissed!
Date: 97-02-10 06:14:57 EST
From: burtfisher@geocities.com (Burt Fisher)
Reply-to: burtfisher@geocities.com
To: NZ2T@aol.com

In God's how can YOU threaten me?
They love you on 145.19 on Wednesday?

I just told you. I don't threaten anyone. I get 19 checkins a week on that net. I guess they DO love me. But even if they didn't, what business is that of yours, sport? What ... did you find some cretan who doesn't like the net? So who cares? We're not there for you (That is certain), but we 're there for those who CARE to checkin or listen. I could give a whack what l'il ole wassisname or some of his cronies think, as long as they express what they think in a manner that has no constructive purpose (just like you, Burt).

Would you like me to send you copies of messages from supporters?
Or from Spectrum?

Sure, Burt. I am always interested in knowing what other people think, particularly when they don't have the guts to send ME their comments. As

for "Spectrum", what is that for? To let me know you actually were compulsive enough to do research on me? Whoop-T-Do!

You hardly are important enough to piss me off but those that know you in North Texas have called me and written me. They say you piss off rather easily.
If I were you I would check the newsgroup.
Tuck in your jeans.

I suppose I do have a temper. So what? That is between me and my conscience. Getting pissed off at jerks ought to be the national passtime, with all the ammunition that is out there. As to all of the "multitudes" who have contacted you, let me guess: I bet most of them have one thing in common. You guess which "one thing" that is, sport. Unlike you, I am not paranoid, and I really dont care what (if anything) some people might be saying on the newsgroups. If there is one thing that all effective leaders have in common, it is that there will ALWAYS be some people who don't like it, and whine to others about it, without offering ANYTHING of a constructive alternative. I am confident, that you and those who have "contacted you" have much in common. Win or lose in the election, I will sleep just fine and will have no trouble looking people in the eye. Anything I have "taken credit" for, I can document, and I can also admit to some mistakes as well. Both are part of who I am, and what this team is. Bottom line is, that nothing I have done I did alone. There are MANY people who share credit for the accomplishments we have enjoyed in the past 4 years. I feel privileged to have serves with some of these people. As the elected official involved in these projects, many of which were my idea, I do enjoy being identified with their successes. I am also, however, fully culpable as the elected leader for the few mistakes we have made. That, in my opinion, is one of the essential ingredients lacking in today's leaders: the willingness to take blame as well as credit. But what you and your li'l weasel pal would like, is for me to take all the blame and none of the credit. So sorry, but that dog don't hunt, sport ! Document your accusations, sport. All you are (still) is a big mouth that has a lot of hot air and gas to spread.

You obviously have mistaken me for someone who gives a hoot about what you or people LIKE YOU think. I do care (very much) about the opinions of others, and what their agenda is, but I have no use for whiners and trouble makers, who have no plan, no agenda, and only know how to throw stones and run away.

Also, I am not perpetuating this - YOU ARE, gavone. But I am starting to feel like our little contest of wills may be hurting amateur radio. It is not hurting me personally, because (trust me) there's an awaful lot of people who love to see Burt "getting his", and I know you know that even better than I.

The first thing on my agenda is not you. I am indeed sorry to disappoint you, but that is the truth. There seems to be non-amateurs who read these newsgroups, and my guess is that the overall effect of my replies to you is far more negative than positive in its effect. I doubt that you will

cease being a jerk, but hopefully enough people will get wise to you, and that will be the end of your senseless trolling for controversy.

Is that the best insult you can muster?
I would spend more time returning your calls.

Time will tell. Seems there's all these invisible people who say we do not return their calls, Like who, sport?

I always return my calls, when I get the message. I have the bills to prove it. Funny....just had some guy shoot off his mouth not long ago, and when he was confronted he changed his story about having contacted me. See, I keep ALL tapes from my machine, and I have a printout for my caller ID. SURPRISE !! Please tell WD8LDY, KB5YUC (I think that was his call), and the rest of the "entourage" hello for me.

Shall we send THIS message to 4000 hams in North Texas for your SM race? You want 4 more years, not this time.

Go ahead, sport. I sent my own mailing. Aside from that, a good number of those 4000 hams KNOW me, where you do not. Aside from that, balloting closes this coming Friday, sport. So hurry up and get your comments out. At least I have had the chance to serve, which is more than I can say for you, sport.

Funny thing about the democratic process: people tend to vote for the most QUALIFIED person, and tend to shy away from negative dolts like you. Ain't that re-assuring?

Hey, sport ... I never did say I was perfect, or without flaws. But ya know what? I have done a pretty good job, and I think the membership is going to give US another TWO years. I suppose this indicates just how much you know about ARRL policy. Sounds like one of my opponants, who thought that an ARES application required a reply from me. It doesn't, and (in fact) the SM never sees that. Goes to HQ, where it then is placed on a database. Like him, you also like to shoot your trap off, prior to engaging that poor excuse for a brain of yours. Oh, again say hi to Dave for me.

You are a Yankee in North Texas?

No, I am a "reb" who lived up North for as long as I HAD to, and then RETURNED to the South. I do not like yankees much, because too many of them are just like you, Burt. Ignorant, rude, and full of themselves. You guys always "talk" a good fight, and there's a lot of pushing and shoving, yelling and threats. I'd rather just get it on, ole sport.

Burt's Rule:

Don't Get mad get even.

Adler's Second Rule:

When you know someone is bluffing, don't call - raise !

It has taken a while to gather all the information about Bob Adler, NZ2T. I will not pass judgement on what his peers in North Texas said about him. He has seen fit to attack me with profanity and insults. Further he has violated his word in saying he will not send me any more messages nor would he post further on the ham newsgroup. So I do believe what follows based on how Adler has treated me.

Wah...wah ..... aw, poor widdu Burt! Da big bad Texan is pickin' on poor widdu innocent Burt, who would never instigate a fight, nor insult anyone. HAR HAR HARDY HAR HAR HAR !!

Do you believe this schmuck? He actually spent time "researching" l'il ole me, and then he claims that I am not "pissing him off". Hmmmmm. LMAO ... and then he states that he is not passing judgement on me... NOT MUCH !! As to what my peers think, that is not decided in this election. What is decided in this election is who the SM will be for the next two years here. Regardless of that outcome, my friends will still love me, and my enemies will still not like me much.

I have ceased sending messages to Burt, other than replies to his insults...like this one. I will also continue to "nail" him, because (now) he can't leave. I asked him nicely, and he just kept it up ... so I am going to continue to speak the utmost syllable of my convictions against his behavior. If there's some folks who think Burt ought to be left to run amuck here, that's your right to think that way. I just think otherwise.

Adler is running for Section Manager in a vote to be tabulated February 18. There is at least one other running against him. I am told that Adler wears an
unusual ☐costume☐, as in untucked jeans trying to be a ☐cool Texan☐, that Adler likes to bulldoze people in North Texas, that Adler thinks that only he has the right answers, that he claims to have degrees in education that no one has seen, that he spent a large sum of money sending over 4000 pieces of mail to get reelected SM, that every Wednesday he gets on the 145.19 repeater and ☐preaches to the masses☐, that Adler is truly an ☐I☐ man, he is wholly self involved, that Adler claims credit for the work of others, he demands to be liked and to be loyal, that he has a mole in the ARRL headquarters (Rick Palm?) and that he claimed he was going to shoot someone in Calif. I have received these comments from North Texas both by Email and direct phone conversations. Adler has threatened me as well. Do I think he has the guts to do anything, no. But this could get him so mad he actually comes here and does shoot me. My family has been informed of this but I do not scare easily. If Adler was a real tough guy (like a U.S. Marine) I would be more concerned. But I think he is more like the Wizard of Oz.

All I can do is feel sorry for you, Burt. The net is open to anyone, and always have been. What I bring to the net are bulletins, and matters from the ARRL Letter or some other similar publication. No one forces anyone to come to the net, yet people do. I also no longer wear the same style clothes, nor do I drive my old "grey ghost" anymore either. Of course, the person telling you this does not know that, because they probably have not

seen me in some time. What I wear has nothing to do with anything anyway. I dress appropriately, most of the time, but I will admit that I am NO fashion horse. I can tell you that BOTH of my opponants are not either, LOL.
What is funny in your accusations of me is that I have been accused of being too much of a delegator by most of the people who have OPENLY criticized me. It is human to PREFER to be liked, but there are times when one has to make a decision that is based on principles that are not self-fulfilling. Like when? Oh, like the time I had to "fire" a close friend (who was STM at the time) because he did something that was not "proper". I had to choose between the whinings of a little malcontent, and a good friend of many years. My heart said one thing, but I did the "right thing". What is ironic, is the "little whiner" is the person that you have obviously been talking to. He is also the same "whiner" who used me as a source of information prior to moving here ... and I always DID return his packet message to me, har har. There are also times when it is proper not to care if one is liked, and in fact just the opposite. That is the case with you, sport.

As to your stupid comments and vailed threats, let me make this offer in a public forum, so that you and I can dispense with this nonsense. If you REALLY want to settle this in a physical way, I will come to you. We both put up a bond...say $2500. If one does not show, the other collects the money. We can meet in any gym you choose, and we can then "get physical". No weapons, no nothing. Just fists and guts. If this is okay with you, let's make arrangements. I am not going to come "stalk you". I don't take you seriously enough to do a thing, sport.

I also believe in obeying the law, and assault is against the law. The only thing you're guily of might be assault on a croch. But, if you're serious, then let's just do it like a couple of men. No noise, no mouth, and we do not have to disturb these other good people who read this stuff. Just two men, settling a score. So, now let's see who is in Oz and who is not. Oh, and I have NEVER shot anyone, nor have I ever threatened anyone that I would do so. Just one question out of curiosity, sport: DO YOU HAPPEN TO KNOW WHAT KIND OF DRUGS THE PEOPLE ARE TAKING WHO YOU TALK TO? Drugs are illegal, Burt, and you should terll them to stop taking them. They are obviosuly killing brain cells!

Yeah, this is a can of worms that few legislators want to face.
They're going to have to deal with it sooner or later, though.
Eventually I expect that encryption will become commonplace --if only
because the public will ask for it.

3276. Collecting QSL clipart for new CD-ROM

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-10 00:00:00 UTC
From: dvhunt@es.com
Message-ID: <5dnp6r$hqv@esnews.corp.es.com>
Source record: 205013

My Dad used to print QSL cards back in the 80's but has since shut his presses down. Now with the advancement of computer and color printer technology, we have decided to get back into it, from a slightly different angle.

We are going to produce QSL clip art on CD-ROMs so HAMs can create their own QSL cards on their home computer and print them out in full color on demand. This clipart could also be used in other applications, like HAM newsletters. Anyone interested?!

Currently I am in the process of collecting and creating HAM art clips that we think fellow HAMs would like on their cards. To make our collection LARGER, I am asking for additional art from anyone who would care to donate. For those who help add to my collection, I will send you a coupon towards one of our finished CD's. (The more you donate, the bigger the coupon.)

So, what have you got? You can send me clipart via email uuencoded, or better yet, give me and ftp or WWW site to download it. I will even accept disks or printed material in the mail. I can scan whatever you send. Any way you can get it to me will be acceptable. And I'll give you credit for your work.

But, NO COPYRIGHTED material can be accepted, unless you own the copyright and you give me rights to publish it. It must be in the public domain or so generic that no one will care.

And please be QUICK. I hope to be shipping CD's in a month or two.

Also, if you're interested in purchasing a QSL clip art CD-ROM, email me or snail-mail me and I'll put you on my list. Prices have not yet been determined, but they will probably be around the range to have one set of cards professionally printed.

Send me what you got!

Thanks

3278. Straight key or Iambic keyer for new Hams

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-10 00:00:00 UTC
From: badger@vbe.com
Message-ID: <5dnqm7$2se@news.vbe.com>
Source record: 205015

I have been soliciting opinions regarding the first key to be used by a new Ham. Some said that they would start with a keyer and iambic key because you would'nt have to learn something new later and that to achieve a GOOD 13 wpm with a straight key is difficult and frustrating to do while the keyer is easier to send these faster rates...

Others say that a keyer is too difficult to learn on and because most new operators discard the key after passing the tests and going to other modes the expence is not warranted.

Any other opinions ???

Has anyone heard of a 435 MHz circular polarized patch antenna? Are patch antenna CP? I'm looking for a manufacturer, plans, used, or any information for the design of a CP patch antenna.

My design needs are circular polarized and VERY SMALL!! Am I overlooking any designs?

Please email me with any information.
Thanks & 73,

Are you into HOT CHAT? We've got the world's largest voice-personal dating system, as well as the hottest, sexiest "1 on 1", "2 on 1", and "PARTY-LINE" chat you'll find anywhere, all in one place! And you don't have to call a 900 number to get in on this hot phone fun!

You can choose from 5 hot programs that are sure to fulfill your every desire!

You can press 1 from the main menu to choose from our sexy "1 ON 1" PLEASURE MENU, then:
*to talk to a BEAUTIFUL SEXY GIRL, press 1.
*for a 1 on 1 session with an experienced DOMINANT MISTRESS, press 2.
*for steamy talk with a LUSCIOUS TRANSVESTITE, press 3.
*for an erotic 1 on 1 chat with an EXOTIC TRANSSEXUAL, press 4.

*for some man to man action with a HOT GUY, press 5.
You'll be billed just $3.99 per minute for your selection.

Or you can press 2 from the main menu to DOUBLE YOUR PLEASURE, then:
*to speak to 2 HOT SEXY GIRLS, press 1.
*to get it on with a swinging WILD COUPLE, press 2.
You'll be billed just $4.99 per minute for your selection.

Or you can press 3 from the main menu to join the GROUP ORGY LINE!
*You can party with the nations nastiest swingers for only $2.50 per minute.

Or you can press 4 from the main menu, then:
*Press 1 to join the FANTASY NETWORK. This is the world's only phone service that allows you to connect with people who share your personal fantasies. This state-of-the-art voice mail system lets you listen to messages from beautiful girls, sexy transvestites and she-males, gay and bisexual males, and dominant women. Leave them a hot and sexy message, then call back to see what erotic message they have left for you. You'll be billed just $3.50 per minute.
*Or press 2 to listen to a hot selection of recorded fantasies steamy enough to make you explode! Choose from beautiful, sexy women's fantasies or domination stories. You'll be billed just $2.49 per minute.

Or you can press 5 from the main menu for the HOT AND NASTY DATELINE, where you can listen, and respond, to voice personal ads from hot horny girls in your neighborhood, including their real names and home telephone numbers! You can also leave your own personal message for people to get in touch with you. Make new friends on the world's busiest voice personal lines! Meet singles or couples, gay or straight; you'll be billed only $2.99 per minute.

***JUST CALL 1-800-756-3906 to use your Mastercard, Visa, or American Express card. The charge is just $2.49-$4.99 per minute, plus a 50 cent connection fee. 18+ only.

***OR CALL 1-900-745-4398. The charge is just $2.49-$4.99 per minute. Must be 18 years of age or older.

Call now!!! YOU WON'T REGRET IT!

>integration.

Actually, there are 5 states to Morse, you left out the intra-letter
space. But only 2 of the states are transmitted when OOK is used, the
dot and the dash. So you don't get a QAM-like constellation. Instead
you get two detectable states and three unknown states that you have to
infer from context. This is a horrible code design for a gaussian noise
environment. (Of course OOK Morse was designed for the landline where a
high SNR is guaranteed by the nature of the transmission medium. It was
never intended to be used by radio.)

>It's not a nice, "predictable" digital-type signal, but you do have leading
>and trailing edges to synchronize on every dash and dot. What may help is
>to pass the raw audio through some noise filtering, then pick off the
>edges. You can always make the software more intelligent, have it adapt to
>some of the mutual information/common letter and number combinations.
>After all, CW conversations are rarely about anything more than the
>weather, right? ;-)

The problem with using differentiation to do edge detection is that
the edges contain very little energy, so for weak signal work they
are easily obscured by noise, and any attempt at noise filtering rounds
off the edges and destroys timing information. You need to integrate the
energy of the whole element to get it above the gaussian noise floor. But

you can't do that unless you know its timing, and you can't know that because the code doesn't have equal length elements, so you can't be sure a priori where one element will end and another start.

The solution to that problem for Morse is out of band clocking. By synchronizing transmitter and receiver to an external timing reference, the element edges can be precisely lined up on dot interval boundaries. You can then integrate each dot interval separately and piece together all the elements of the characters. This is what coherent CW does.

For example, an 'E' is a letter space followed by transmitted energy for one dot interval, followed by another letter space. A 'T' is a letter space followed by *3* consecutive dot intervals of transmitted energy followed by another letter space. An 'A' is a letter space followed by one dot interval of transmitted energy, one dot interval of no transmitted energy (the intra-character space), 3 consecutive dot intervals of transmitted energy, and finally by a letter space. Etc. Letters with more than one element have a complicated timing sequence, but the principle is easily implemented *provided* you know where the interval boundaries are. That's what the external clocking does for you.

Wniform codes can carry their own embedded clock in every element, but Morse carries it only in transmitted dots. Since you can't know a priori when a dot is coming instead of a dash or one of the space intervals, you can't do a good DPLL to recover the clocking information from the received code. But using out of band clocking can solve that problem. Coherent CW enthusiasts use a standard time signal as their external timing reference, IE WWV, CHU, or some other standard source available to both the sending station and the receiving station.

The other problem remains that only 2 of 5 of the states of the code are transmitted, and the other 3 have to be inferred against the gaussian background. This gives a serious SNR penalty for the decoder when signals are weak or fading. With strong signals, differentiation can be used on edges, as you suggest, and that lets you derive a clock, and lets you synchronize your slicer to the middle of a dot interval. This makes the decision point of whether transmitted energy is present or not in that interval more noise immune, but that merely gets you orthogonality and not antipodal signaling. For weak and fading signals, even an externally clocked Morse signal suffers a 10*log(.4) = -3.98 db penalty on average compared to a code which transmits energy for every element in an antipodal fashion. Depending on the text being transmitted, the penalty can be worse, but it can never be better than -3 db. Without the external clock, the penalty is much worse.

Lacking the advantage of the out of band clocking of coherent CW, about the best you can do is to sample the incoming signal at a rate above the Nyquist limit for a continous dot string at the fastest keying speed you expect to receive, then use a sliding window to examine the energy of the signal over groups of samples to try to find where the element edges *should* be. Then you can go back and resample the signal using that information.

You need to be able to hold several seconds worth of samples in memory to make this work. Once you have a trial decoding, you can use contextual clues to evaluate it to see if it "makes sense", IE forms valid letters. If it doesn't, you can displace the clock phase and try again. (You can do this very quickly at machine speeds, so the reception lag is essentially only the lag attributable to the amount of sample you hold in memory at any given time. This is a serious case of "copying behind". A manual operator can't hold this much information in his head, so he can't copy this far behind.)

This can get you the most probable alphabetic sequence which was sent, but there is no deterministic way of gauging a confidence factor for that probability. You can't know whether an element was corrupted by channel impairments, or whether it was actually transmitted in error, IE the other operator made a keying error (you can use a soft decision heuristic in the slicer to give you clues about when you might have experienced a channel impairment however). You can then apply a heuristic to see if the alphabetic string *spells* something which makes sense, or whether it is just gibberish. If it is gibberish, you've probably made an error in element timing extraction, but it could be that the sending operator is just a chronic misspeller. (This is where the human operator has an advantage, he can apply a more complex heuristic to determining if what is spelled, or misspelled, makes sense.)

There is no absolute assurance possible that you've received and decoded the message properly because there is no explicit error check sequence sent. Nor can simple repetition of a message assure you of eventually getting it through error free. Every attempt could have one or more errors, distributed in different parts of the message, but you have no idea *where*, so you can't combine the retries to form a complete message. If FEC were used, however, you could know where the errors were in each attempt, and if there weren't too many consecutive errors, correct them on the fly. You could expect with confidence to be able to eventually piece together the entire correct message. And you can statistically expect to do it with many fewer retries than if you only know an error exists. If you can't even know an error exists, then the situation becomes hopeless. That's the case with hand sent Morse, you can never be 100% sure you've copied what the other operator intended to send. (With fairly strong signals, you can be *pretty* sure you've copied it correctly, but never 100% sure.)

Modern codes and protocols *can* give you 100% assurance that you have a correct copy of the message sent. And antipodal modulations give you a *minimum* 6 db advantage in gaussian noise over OOK. Combining FEC coding gain with the coherent antipodal signaling of a modern signaling system, you can expect to operate (with some level of retries) at signal levels as much as 30 db (raw SNR number) below where OOK Morse operation (at the same rate) is possible.

The advantage acrued in Eb/No is much less, *but* because you don't know where the bits *are*, you can't exploit Morse beyond raw SNR,

so you can't realize the full Eb/No potential of the Morse signal.
You can exploit the full Eb/No potential with a modern coding, and
that's where the big coding gain advantage occurs for modern techniques.

Note that the integrate and dump technique gives you a Eb/No
gain which is proportional to the square root of the bit time.
In other words, for every 4x you slow the code rate, you get
a 3 db improvement in Eb/No. Now in practice, a human operator
cannot work much below 5 WPM in a gaussian noise channel. The
mental integrator doesn't have a long enough time constant.
But machine sent codes can be slowed to an arbitrary degree.
This is exploited by the Lowfers in systems where a bit time
is up to 100 seconds in duration. That gives a 13.9 db improvement
in Eb/No over the best which a human operator can achieve by ear
with Morse. Combined with the other factors listed above, this
can allow signals to be copied which are 50 db (raw SNR) below
the threshold of audible copy for Morse. (And that's with zero
decoding errors too.)

Now that may not sound very useful, but using a compression technique
called "common codebook compression", it is easily possible to compress
20 WPM text into a 3.33 bps transmission rate, IE a compression factor
of 7.2:1. So instead of taking 2,400 seconds to send 20 words, you can
send them in 333 seconds. That's slow, but for the low content of the
typical amateur QSO, it isn't intolerably slow given that the SNR can
be more than 50 db below the weakest level usable by ordinary by hand
and by ear OOK Morse. (Note that's raw SNR in a fixed bandwidth capable
of holding either emission. The Eb/No can't go negative, at least not
more negative than -1.6 db, because of the Shannon limit. What's being
exploited here is the gross difference between OOK Morse and a better
technique in the *utilization* of the available Eb/No.)

Note too, that if you *don't* slow things down, IE if you maintain
the 20 WPM information rate, this technique is also a way to pack
many more QSOs into a given amount of spectrum than achievable using
ordinary OOK Morse. As noted in another post, 20 WPM OOK Morse occupies
about 83 Hz, this emission can be coded efficiently into 1.665 Hz. That
gives a band packing density of 50x what is possible with OOK Morse.
And since it is antipodal and coherent, and can use FEC, it can still
operate at least 30 db (raw SNR) below the level at which 20 WPM OOK
Morse becomes unusable. This means less QRM because everyone can run
less power, and that can improve frequency reuse, so packing densities
beyond 50x become practical. Who said our bands are too crowded?
They are only crowded if we persist in using inferior techniques.

Gary

Craig is incorrect in this notion. The INMARSAT satellite service is but one component of the GMDSS, as is the use of MF/HF TELEX and DSC (Digital Selective Calling). In fact, it is not a requirement to carry an INMARSAT terminal. Even if it is, the ship still has to carry MF DSC and TELEX. If Craig has any doubts, I refer him to the appropriate ITU Appendices which stipilate the DSC calling and distress and safety frequencies on HF. Another indication of Craig's error, he may wish to confer with the Admiralty "Blue Books", although not perfect, give the most comprehensive listing of any similar publication in the world of MF and HF stations that are capable of GMDSS operation.

the point is that at the present rate of decline 1,000 a year how long
will it be before the rsgb go bang, there will be a critical mass.
but why dont the rsgb publize the figure and bring it to the attention
of the members, why should i have to do it.
the sad part is that every year the rsgb general manager used to say
in his right up that the memebrship had once again risen. thankfully
after publicizing the 10,000 membership drop over the last ten years
that has now stopped.

: ><1997Feb6.190947.28180@ke4zv.atl.ga.us>...
: >[other messages deleted]

[likewise]

: The problem with using differentiation to do edge detection is that
: the edges contain very little energy, so for weak signal work they
: are easily obscured by noise, and any attempt at noise filtering rounds
: off the edges and destroys timing information. You need to integrate the
: energy of the whole element to get it above the gaussian noise floor. But
: you can't do that unless you know its timing, and you can't know that
: because the code doesn't have equal length elements, so you can't be sure
: a priori where one element will end and another start.

True enough...you are much better if you want to go this route to try to
detect the "middle" of a pulse..that's precisely how the newer GRAPES
modems work..they estimate the timing for the middle of the pulse and do
their sampling at that point.

: The solution to that problem for Morse is out of band clocking. By
: synchronizing transmitter and receiver to an external timing reference,
: the element edges can be precisely lined up on dot interval boundaries.
: You can then integrate each dot interval separately and piece together
: all the elements of the characters. This is what coherent CW does.

This is all a problem of SYNCHRONIZATION. You've mentioned an external
synchronization mechanism here.

: The other problem remains that only 2 of 5 of the states of the code are
: transmitted, and the other 3 have to be inferred against the gaussian
: background. This gives a serious SNR penalty for the decoder when signals
: are weak or fading. With strong signals, differentiation can be used on
: edges, as you suggest, and that lets you derive a clock, and lets you
: synchronize your slicer to the middle of a dot interval. This makes the
: decision point of whether transmitted energy is present or not in that
: interval more noise immune, but that merely gets you orthogonality and
: not antipodal signaling. For weak and fading signals, even an externally
: clocked Morse signal suffers a 10*log(.4) = -3.98 db penalty on average
: compared to a code which transmits energy for every element in an antipodal
: fashion. Depending on the text being transmitted, the penalty can be worse,
: but it can never be better than -3 db. Without the external clock, the
: penalty is much worse.

There is something else you can look for though...assuming that your CW keyer uses a gated oscillator, then you can lock onto the phase/timing of the oscillator. It's not antipodal signalling, but it will still work very well because you can eliminate a lot of noise by a simple deconvolution. Better yet..if the "edge" shapes on the pulses are well known, you may also be able to combat pulse noise and/or fading with knowledge of what a pulse edge is supposed to look like vs. that choppy spike and/or slow fadeout that you see.

Also, you are dealing with a channel with erasures here. So you get three possible states: keyed, not keyed, erased. There's an ambiguity with the not keyed/erased case. So what you do is try both cases and see which one makes the most sense (has the highest probability of being correct).

: Lacking the advantage of the out of band clocking of coherent CW,
: about the best you can do is to sample the incoming signal at a
: rate above the Nyquist limit for a continous dot string at the fastest
: keying speed you expect to receive, then use a sliding window to examine
: the energy of the signal over groups of samples to try to find where the
: element edges *should* be. Then you can go back and resample the signal
: using that information.

This is an application of the Viterbi algorithm. You just need to insert feedback which estimates timing. The Viberbi algorithm provides the maximum likelihood function of the state tree with controllable complexity.

: You need to be able to hold several seconds worth of samples in memory
: to make this work.

Nope..the Viterbi algorithm gives you a general structure for that problem. Tree coders and such also work the same way.

: Once you have a trial decoding, you can use contextual
: clues to evaluate it to see if it "makes sense", IE forms valid letters.
: If it doesn't, you can displace the clock phase and try again. (You can do
: this very quickly at machine speeds, so the reception lag is essentially
: only the lag attributable to the amount of sample you hold in memory at
: any given time. This is a serious case of "copying behind". A manual
: operator can't hold this much information in his head, so he can't copy
: this far behind.)

Do it in two stages. First make estimates on the "carrier present/no carrier present" decision. Then move up to contextual decoding. The reason for two stages is that you really cut down on the amount of data by time you get to the context stage of the game.

: This can get you the most probable alphabetic sequence which was sent,
: but there is no deterministic way of gauging a confidence factor for
: that probability. You can't know whether an element was corrupted by
: channel impairments, or whether it was actually transmitted in error,
: IE the other operator made a keying error (you can use a soft decision
: heuristic in the slicer to give you clues about when you might have
: experienced a channel impairment however). You can then apply a heuristic
: to see if the alphabetic string *spells* something which makes sense, or

: whether it is just gibberish. If it is gibberish, you've probably made
: an error in element timing extraction, but it could be that the sending
: operator is just a chronic misspeller. (This is where the human operator
: has an advantage, he can apply a more complex heuristic to determining
: if what is spelled, or misspelled, makes sense.)

Actually there is. It's called "soft decoding". Unfortunately, a screwed up transmission is harder to judge..but the same soft decoding algorithm will still make a best guess. You may dip into the realm of synchronization errors (missed "dot") for instance, but the principle is the same.

: There is no absolute assurance possible that you've received and
: decoded the message properly because there is no explicit error
: check sequence sent. Nor can simple repetition of a message assure
: you of eventually getting it through error free. Every attempt
: could have one or more errors, distributed in different parts
: of the message, but you have no idea *where*, so you can't combine
: the retries to form a complete message. If FEC were used, however,
: you could know where the errors were in each attempt, and if there
: weren't too many consecutive errors, correct them on the fly. You
: could expect with confidence to be able to eventually piece together
: the entire correct message. And you can statistically expect to
: do it with many fewer retries than if you only know an error exists.
: If you can't even know an error exists, then the situation becomes
: hopeless. That's the case with hand sent Morse, you can never be 100%
: sure you've copied what the other operator intended to send. (With
: fairly strong signals, you can be *pretty* sure you've copied it
: correctly, but never 100% sure.)

There are ways to combine results. With hard decisions, do the old "best 2 out of 3" approach. With soft decisions, you can weight the received data according to how good it looks.

: Modern codes and protocols *can* give you 100% assurance that you
: have a correct copy of the message sent.

Nope. This is never true. But you can reduce the probability of error to say somewhat less probable than the chance of all of the electrons in your radio tunnelling out into space simultaneously.

: And antipodal modulations give you a *minimum* 6 db advantage in gaussian
: noise over OOK.

At the expense of synchronization problems. There are some heavy advantages to orthogonal modulations, such as robustness in the face of noise and trivial suboptimal or nearly optimal receivers.

: Combining FEC coding gain with the coherent antipodal signaling
: of a modern signaling system, you can expect to operate (with some
: level of retries) at signal levels as much as 30 db (raw SNR number)
: below where OOK Morse operation (at the same rate) is possible.

True enough...then if you go to a turbo code, you can operate at 0.5 dB or even a little below that (negative decibels) at a coding rate of around 0.25. And at that point, even using computers and some serious horsepower to beat out human operators, they're not even close to error rates of less than 1%.

: The advantage acrued in Eb/No is much less, *but* because you don't
: know where the bits *are*, you can't exploit Morse beyond raw SNR,
: so you can't realize the full Eb/No potential of the Morse signal.
: You can exploit the full Eb/No potential with a modern coding, and
: that's where the big coding gain advantage occurs for modern techniques.

Ahem...realize that in almost ALL of the information that you are quoting from, they conveniently IGNORE the problem of synchronization. Synchronization is NOT necessarily a trivial and/or solved problem, especially if you want burst and/or packet transmission. Morse code is an orthogonal, not antipodal, code, so you can't trivially make the "on/off/erasure" decision, but it's not as bad as you make it out to be. Remember...antipodal signals get you a net gain of only 3dB (assuming coherence in both cases). And quadrature signalling gets you double the bandwidth at the same SNR.

The reason I'm harping on synchronization is that I've been working on designing a high speed packet relay in the range of 1 mbps with packet sizes on the order of less than 10,000 bits (for switching purposes). At that size, if you were going to go for say spread spectrum with a spreading rate of say 100, without a matched filter and lots of other tricks, you are dead in the water because a sliding synchronizer which takes a half second or so is just way too slow. And that's a typical implementation.

I owned a 93 Explorer. Last month I bought a 97 Expedition. I have a
50-watt dual-band mobile installed on a mag-mount roof-mount antenna,
and a 100-watt HF Yaesu FT900 installed using a 20-meter ham-stick
mounted on the rear hatch-back using a Diamond deluxe hatch-mount.
This is a little different than my Explorer install, but the same
radios.

After installation I did have a small alternator-whine problem on
the VHF+ radio. Changing the grounding point solved this problem.

Other than that, I have not experienced any problems with RFI
interference either to or from the radios.

3302. Long Island Hamfest This Sunday 2/16

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-11 00:00:00 UTC
From: "H. Mark Nadel" <hmn@i-2000.com>
Message-ID: <33013FEC.6254@i-2000.com>
Source record: 204890

YES, THERE ARE STILL SOME TABLES AVAILABLE FOR THIS SUNDAY !

Hamfest - Sunday February 16, 1997
Sponsored by - The Long Island Mobile Amateur Radio Club
Where - New York State Armory, 63 Babylon Turnpike, Freeport, New York
Time - 9:00 - 2:00 (doors open at 7:00 am for sellers)
Admission - $25.00 / 6 ft table (LIMARC Supplied): $ 6.00 General Admission All others

Make your check out to LIMARC and mail it to:

Hamfest
22 Springtime Lane East
Levittown, New York 11756-4419.

For any additional details on the Hamfest call the LIMARC information line at 516-520-9311 any time 24 hrs/day.

There will NOT be any amateur radio exams given at the Hamfest.

Directions:

1. Take the Northern State Parkway, Southern State Parkway or Hempstead Turnpike to the Meadow brook State Parkway South to Exit M 7 west, Babylon Turnpike. You will see the
New York State Armory on you left side as you exit onto Babylon Turnpike.

2. From Sunrise Highway you can pickup the Meadow brook Parkway Noth the exit M7 west, Babylon turnpike to the Armory just on your left side as your exit onto Babylon Turnpike
west.

3. If you are Coming from any of the following bridges: Throgs Neck, White stone or George Washington follow signs to Long Island Via the Grand Central Parkway to The Northern State and follow above instructions from paragraph 1.

If you are coming from the Verrizano Bridge, take the belt parkway, to Long Island to The Southern State parkway and following the above directions in paragraph 1.

Door Open at 7:00 am for sellers and 9:00 am for the general public.

Phillip -

Since the Baycomm is only a modem, all the Ax25 work is done by your cpu.
You are right in thinking your cpu is too slow! I used to attempt to
run a baycomm on my toshiba t1000 XT laptop ... it would lock up.

For a nice portable setup, I would recommend your HP200, with something
like a Heathkit HK-21. The HK-21 is a cigarette pack sized TNC, with a
spot to pop in a 9 volt battery. It's standard KISS mode compatable as
well. Good luck finding one.

73's and good luck!

I also don't really know what the transmissions might be, but I have also heard transmissions like the ones that you mention. A couple of times after work (approx. 11:00 PM Pacific Stnd. Time) I have received strange transmissions that were voices & a digital transmission on my 440 HT. The voices were disjounted (I only heard one side of the conversation), but the conversations were some medical instructions of some type. My QTH is in Redlands/San Bernardino California, and off hand I don't remember what frequency I received these transmissions. My HT is an Alinco DJS41.

Message-ID: <33009FE5.2D04@Oxy.com>
Source record: 204900

It's with great regret that I inform the amateur community the passing of Bill York, KA5EOI. Born December 6, 1920 became a silent key February 10, 1997 at 11:30 CST. in Dallas, Texas.

If anyone knows him or knows of people in the Cedar Creek area of east Texas, please pass along this news.

Bill's funeral will be at Restland, Greenville and LBJ at 3:30 CST.

Bill has been involved in radio for many years dating back to his service days with the U.S. Navy in World War II. He has helped countless people become hams and learn electronics. I will especially miss the swapping of stories, and the occasional horse trading from time to time. He will be missed by all that knew him.

73es OM KA5EOI de N5RWC sk

Source record: 204902

Well I think the subject is very descriptive :) I own a Icom IC-Z1A and I would like to get any infos about capabilities and mods for this handheld, or where to find them. I had some infos more than a year ago and I want to update my knowledge.

I am especially interested about extended RX in 800-900 MHz bands. I can actually access these frequencies from the keyboard but I don't receive anything. Some time ago I heard that a specific hardware mod can add that ability to the handheld. Someone have info about this?

Please reply to yac@total.net

Thank you!

Correction ... the statistic was that 40% of US hams operate CW to some
degree.
(could easily be read to mean "occasionally" ... so don't assert that a
solid 40%
of all HF operation is CW ... the statistics don't support that.)

> (Gary said:)
> : The skill is technically obsolete, just as the skill of hand hammering

Aw, come on ... how many times do we have to post the same resons?
Besides never remembering, them, you're unlikely to ever accept them,
as evidenced by your attempts to discount them every time they're posted.
(I use the collective "you" here to refer to pro-coders as a group, not
wishing
to single out Mr. Craig on this ...)

> Why not get a group together to lobby the ITU for some HF allocations
> for 'advanced mode' experimentation?

That exists already ... it's called the AMATEUR RADIO SERVICE. No need
for something new ... all we need to do is start using what exists in the
manner
in which it was intended to be used ... instead of just playing games and
having

stupid contests to see who can stomp who into the ("ethereal") ground on
any
given weekend.

> It's possible such a request might
> be granted considering how HF is being abandonded by other services
> lately.

I don't know where you get the idea that everyone is bailing out of HF ...
most of the users of HF want more ... not less.

> For some reason I could not hit the repeater that day, but sure was
> fun trying.

Once I was waiting in line at a Pizza Hut and talking simplex to a friend
at
the other end of the mall. I noticed that whenever I keyed up the cash
register
beeped. When I got right near it I keyed up to ask my friend what she
wanted
and the register display went BLANK. Actually I crashed the entire system.
Did you know all the register were interconnected? I didn't. When they
restarted the system it insisted on printing the day end receipts which
took
quite some time. Despite them seeing me key up they had absolutely no
idea I caused the problem. I have since refrained from using the ht near
electronic equipment that has the possibility of delaying lunch.

From reading the .homebrew and QRP forums you're wrong (as usual).

>I am not interested in simply yacking on HF ... I want to design and build
>and experiment and improve our technology ... and Morse has no place in
>those activities ... so it's simply a waste of time and effort.

So what gear do you currently operate on the air that you've designed
and built yourself? You never answer this question.

>Actually *hams* DO design and build ... however there are many current
>licensees who are, as both Gary and I have said, are simply CBers who beep

I'll go out on a limb and say that the largest group of homebrewers today
are those who beep. It's rare for me to see a homebuilt SSB, VHF-FM or
digital radio, but homebrewed CW gear abounds on the air. So again, as
usual, you're wrong.

>where they can yack and act like asses to their heart's content without any
>need for any knowledge of radio at all ...

I don't hear anyone on CW (beepers) acting like asses; what the heck
are you talking about? Your sentence began with CW ops and it ends in
outer space. Let's hope the stuff you design works better than your
structure. (Ever if there was misbehavior on the CW segments you wouldn't
know - you can't copy fast code. So how can you make such a claim?)

One popular shareware program is SUPER MORSE (current version is 4.15).
available on the ARRL BBS as a down loadable file at 860-594-0306. there
are probable other sources, including an ftp site, but I don't have the
addresses

Yes! Through the magic of the Internet and FTP, I am now proud to offer you...the distinguished readers and participants of rec.radio.amateur.misc...the opportunity to download five newly created and digitally mastered sound files! Hear for yourself why I affectionately refer to 3894-dot-5 as "The Zoo of Amateur Radio." Just listen to what you get:

1) BIG-AL-SAT-NITE-LIVE...Hear Big Al, "cranked up" and ready for a night's entertainment as he encourages and provokes his arch-rival "Pork Butt!"

2) PORK-BUTT...Listen to Pork Butt return the fire! Featuring the famous "white trash in America" monologue.

3) PIG-PEN-PETE..."HO HO, HO HO, HO" Here's our friend Pete, getting in his two cents' worth...and being severely admonished by his fellow amateurs for his efforts.

4) RALPH-THE-THIEF...Check out Big Al's response when he discovers Ralph's attempts to wreak havoc on his reception by transmitting the sounds of a BABY CRYING in Al's neighborhood!

5) THE-JAMMING-STOPS...Pork Butt on the offensive, commenting on Al's latest attacks.

It's amateur radio at it's best! Hear for yourself what I've been talking about on this forum. All original hits by the original stars of 3894.5 that made 'em famous! Digitally mastered for optimum sound quality and available NOW via your modem at the following FTP site: members.aol.com:/mnmaniac/3894.5

Don't delay! Download today! And thanks for yer support! :-)

-Drew in Sunny Central Florida-
CB Radio KADF-6895 since September, 1976
Amateur Radio KF4DDM since September, 1995
Radio Personality since August, 1983
Scanner Freak since portable radios with "Police Band" were high-tech

I've got to admit George, that was pretty good. I'm sure even ol' Bert had good laugh on it.

Or as Bert would say, HiHiHiHiHi..... and so on

3328. Interference on 70cm band in Colorado Springs

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-11 00:00:00 UTC
From: wblair@rmi.net
Message-ID: <33000c27.3611373@news.rmi.net>
Source record: 204948

I've been trying to monitor various amateur satellites listed as having 70cm FM downlinks (a few). I keep hearing, on a wide range of frequencies in the 70cm band (435.075 and 437.025 _simultaneously_ for example) a two-tone sequence followed by digital comm. sounds followed by a voice message, many times telling so-and-so to call a four digit number. Since the hospital term "STAT" is used occasionally, I _think_ I'm hearing a hospital paging system. However, I can't remember anyone paging a "doctor" so-and-so. There are no hospitals near me. Any ideas about what I'm hearing and why I'm hearing it on amateur frequencies?

3329. Cleartone CM6500 PMR Set MODS?

Source record: 204949
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.amateur.homebrew

Hi All,

Bought a Cleartone CM6500 PMR set at the weekend, very cheaply too, just wondering if it's possible to mod the radio into the 70cm's band, and also where I can find any information to do this. Unfortunately, there is nothing obvious inside like a diode matrix or Eprom, so any help would be gratefully accepted.

Thanks in advance and 73's de G7UOZ, Max.

I like your thinking.
May I offer, perhaps, a middle of the road idea?
Lets spend more time talking about the good ham radio is and has done.
Also, let start looking for ways to add more modes, I am thinking
digital audio etc.

: > >to use this feature to monitor both the repeater input AND output
: > >frequency AT THE SAME TIME.

: In addition to the others already mentioned, let me add
: the discontinued Icom W2A which may be had for about $300
: on the average at ham fairs, or rec.radio.swap. It sports
: two separate displays for each band (VHF vs UHF).

: ray -
: N 47* 34'
: W 122* 18'
:

The poster wanted to monitor 2 frequencies in the SAME band...the W2A can
NOT do this.
I should know...I've had one for years (and love it), but I do know it's
limitations.
P.S. they cover full 800(with 30 Khz steps available, yet)with good
performance.
the mod is just a keypad sequence.
Actually, the same mod makes the unit a pretty decient scanner(although
it IS a bit deaf around 470(but the performance is still ok there).

3332. Vanity Callsigns Seem to be Moving

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-11 00:00:00 UTC

Source record: 204952

I've been checking the fcc ftp site
ftp://ftp.fcc.gov/pub/XFS_AlphaTest/amateur
the past few days, and they've been processing maybe a dozen vanity
callsigns a day. The application dates today (mon.zip) are around
November 15 to November 27 (1996), plus a couple from June and
September.

Congrats to the lucky winners!

I'd re-post an edited version of the indiv.dat, but I'm on
a UNIX system and I have to do a 3-machine tap dance to
use PKUNZIP.

3341. More from the world of NZ2T

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-11 00:00:00 UTC
From: Burt Fisher <burtfisher@geocities.com>
Message-ID: <33005AC7.5EC2@geocities.com>
Source record: 204961

I received the following from NZ2T, he is running for re election as SM in North Texas. I ask one question, does he deserve to be re elected?

NZ2T@aol.com:
One more thing, fool. I sent my "reply" to your moronic tirade to the group.
I may, or may not, continue to play with you. You're a total asshole, lol.
Even assholes become boring after awhile. I got a message this morning from
one of your "fans", who seems to think that I am beating up on a "retard". I
see his point, but we both seem to share in the joy of plucking your feathers
now and then.

The "one more thing" is this, and it concerns Rick Palm. I know Rick, of course. Frankly, we disagree on more than we agree on, but I respect him for
the job he has to do. Assholes like you, who pluck at people who have done
you no harm, make me wanna puke...on you, that is. So, that is what I will
do. Rick Palm, though he and I do not agree on much these days, care more for
amateur radio when he is asleep that you ever could while fully awake. He has
the temperment and knowledge to do his job well, and has one other thing you'll never have" some skill in dealing with people, and the character to
stand by his convictions. You are not worthy to lick his balls, sport !

You're a pathetic, impotent, vile little worm, who (like all worms) has no
balls and no backbone. All you know how to do is move dirt and eat manure.
Well, so sorry that the wind has shifted and some of the fecal matter is hitting poor Burt in the face.
Wah WAH WAH WAH !!! You're a little sissy, Burt. And you ain't a leatherneck either - I checked. A peckerhead, peckerwood, dickhead, and maybe
a red neck ... but not a leather neck. The only "Marines" you were in, was
when you were 12 and wet your bed, hawr hawr !

See how much I give darn about that last message you sent. Did you
really
think I could be swayed by some midget and a few of his jerks? Like I
said to
you once before, sport: YOU really ARE a funny guy, Burt !

Now, go back and talk to those munchkins of yours, and when you find one
who
will listen to your witless tripe, give them a quarter and tell them to
call
someone who cares.

ADLER SAYS
==========
The guy who throws the first punch wins the fight 90% of the time. The
guy
who throws the last punch ALWAYS wins the fight.

Burt's response:
Take your best shot.

>equipment, ...

This is false. There is nothing in Part 95 to prohibit a person interested in 11m from designing and building their own receivers and peripheral receiving equipment. 11m antenna design is an open field. Selective calling tone encoding and decoding systems are fair game, too.

There's lots one can do as long as they keep their hands out of a type-accepted transceiver.

A.N.A.R.T.S. News Bulletin 944 2 February 1997

ANARTS MEETING

There will be a meeting of the Society next Friday evening at

7.30 pm in West Lane Cove. Items to be discussed include the

Wyong Field Day and possible problems in disseminating news of

the ANARTS Worldwide RTTY Contest with news of the demise of

two magazines in the digital field - the Digital Journal and

SARTG Newsletter.

Come along and share your views. Contact Col VK2CTD QTHR or

ring 9427 0530 a/h.

Silent key

I have been advised by Glen vk6iq that the highly esteemed member of our RADIO AMATEUR OLDTIMER GROUP Passed away Monday night at approx 7-00 p.m. R.I.P. Fred your many years of PAIN are no more..

The Funeral notice will appear in Thursdays West Australian Newspaper giving FULL details of the arrangments. Present information to hand is that it will be a Burial Service at Karrakatta Cemetery Friday afternoon , as yet the time has to be determined .

All VK6 R.A.O.T.C. Members and Friends are requested to attend and pay their last respects to one of our Radio Pioneers and a FRIEND to all who new him .

Vale VK6FH. De Clem VK6CW.

Col's Column

This week we continue with the ''Early Telegraph''. Starting with a giant, Joseph Henry. His story is quite a long one and it will probably take 3 or 4 weeks to relate. These early experiments fascinate me, without them we would not now be getting excited about the Heard Island Dx-expedition and the like. If you miss receiving the cast any Sunday and miss these notes, make sure you catch it on Packet Radio addressed to RTTY at VKNET.

Joseph Henry was a cultured and unassuming man who carried out some remarkable experiments of great value to the Telegraph and indeed to Electrical Engineering. Henry has been pretty

much neglected by Scientific Historians, even in America, his own country. This despite the fact that his work was successful and of the greatest value. He did not patent any of the apparatus he developed and was reluctant to publish the results of his experiments. Because he delayed publishing his work on Electromagnetic Induction, he was beaten to it by the Englishman Michael Faraday, thus losing for American Science the great honour of this fundamental discovery.

In 1826, henry witnessed a lecture by J.F. Dana. The lecture concerned an electromagnet constructed by William Sturgeon (England 1783-1850). The magnet fired Henry's imagination and he condtructed an improved model with increased magnetic power. He insulated the wire, instead of the Core as Sturgeon had done. In this way he was able to use many closely wound turns of wire in several layers. Henry wound the wire at nearly right angles to the core, thus utilising the magnetic field of the current to the full. He exhibited his electromagnet at the Albany Institute N.Y., where he was a Professor. His experiments with this apparatus was not published till 1831.

Finally for this week, to provide power for his equipment, Henry carried out experiments with batteries consisting of many cells in series, that is, he connected Zinc to Copper, Zinc to Copper and so on, the 'free' Zinc and the 'free' Copper in the two end cells being the terminals of the battery. We now know that such a battery has a high voltage and a high resistance, Hentry called it an ''Intensity Battery''. On the other hand he tried using a single cell in a big container with one large copper and one large Zinc plate. This he called a ''Quantity Battery". We now call it a low-volage, low resistance cell. These batteries had a profound

influence upon the Telegraph both in America and in Europe.
Thats all for this week, the next episode gets a little
technical, so you have one week to brush up on Ohms law, (and
me).
73s DE Col VK2CTD.

MEMORY IN MINIATURE

A new substance that could multiply computer memory 100,000
(one hundred thousand) times has been discovered by
scientists. the find concerns the behaviour of a Molecule
sized magnet created from Manganese, Oxygen, Carbon and
Hydrogen. If scientists can devise a technology to read and
write from the tiny magnet, it will create the basis for a
data storage unit one molecule in size. using magnets the size
of molecules, it is theoretically possible to store hundres of
gigabytes of data in an area no larger than the head of a pin.
The announcement was made by researchers at the University of
Barcelona, Spain on 28th Jan 1997.
>From the Sydney Daily Telegraph, Weds 29 Jan 1997.

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT
(24 JANUARY - 30 JANUARY)
ISSUED ON 31 JANUARY 1997
SUMMARY
Date 24 25 26 27 28 29 30
10cm 74 73 74 74 73 75 74
A 4 7 15 18 20 8 (8 ESTIMATED)
T 14 16 14 -22 20 -32 -4
SOLAR ACTIVITY WAS VERY LOW ALL WEEK.
THE GEOMAGNETIC FIELD AT LEARMONTH, W.A. WAS QUIET FROM 24TH

JANUARY UNTIL 1000 UT ON 26TH WHEN MINOR STORM LEVELS WERE
REACHED, UNSETTLED TO ACTIVE ON 27TH, UNSETTLED TO MINOR STORM
ON 28TH, REDUCING TO QUIET TO UNSETTLED ON 29TH. cONDITIONS
INCREASED FROM QUIET TO ACTIVE ON 30TH. THERE WERE SHORT
PERIODS OF SPREAD F ON ALL DAYS EXCEPT 29TH, WITH SOME
SPORADIC E OBSERVED ON 26TH.
FORECAST (31 JANUARY - 06 FEBRUARY)
SOLAR: VERY LOW
GEOMAGNETIC: MAINLY QUIET, WITH UNSETTLED TO ACTIVE PERIODS
POSSIBLE DURING 5TH TO 6TH FEBRUARY.
FREQUENCIES: NEAR PREDICTED MONTHLY VALUES.
Courtesy IPS Radio and Space Services.
RTDX0124 RTTYDX
VK2SG RTTY DXNOTES FOR WEEK ENDING 24 JAN. 1997 (BID RTDX0124)
This is the last weekend for VK0IR. After Heard Island, you
will have an opportunity to put St. Peter & Paul Rocka into
your RTTY log. See note below. P.S. Heard Is had 80,673 logged
QSOs according to the Heard Is Listserver.
Our information this week came from DJ3IW and the Central
Europe DX Cluster DB0SPC, I5FLN and the IK5PWJ Packetcluster,
IK1HSR, OH2BUA, W5KSI, WB2CJL, WX5L, ZS5S and the Minnesota DX
Packetcluster Network.

notes of Interest:

ST. PETER & ST. PAUL ROCKS, PY0 - The RTTY equipment sent by Randy, WX5L, to Karl, PS7KM, has been received, Karl has hooked it up to his TS-50S and checked it out on the air with VP8CKN. The DXpedition will arrive at the Rocks around 5 February after a 4-1/2 day boat ride.

Karl, PS7KM, will operate as ZY0SK on SSB/RTTY. QSL to CBA.

Tino, PT7AA, will operate as ZY0SG on CW. QSL to CBA. They plan to stay on the island 2-3 weeks.

The VK2SG RTTY DX NOTES are also available on Internet at reflector digital-dx(at)st.rim.or.jp . See also the OH2BUA WebCluster at URL http:www.clinet.fi/jukka/webcluster.html

For next week's bulletin send your bandpass ansd notes of Interest to Luciano I5FLN at ZS5S.ZAF.AF

ARLD004 DX news

This week's bulletin was made possible with info provided by Tedd, KB8NW, the OPDX Bulletin, Stephan, N2MAU, 425DX News, the DXNS and Contest Corral from QST. Thanks to all.

VIETNAM, 3W. Rolf, SM5MX, is QRV as XV7SW and has been

working the US West Coast on 160 meters. Please note that 1827 kHz is his only permitted frequency. He will be QSX on 1824 kHz. QSL to SM5MX.

MADAGASCAR, 5R. Maurizio, 5R8FH, is a lay missionary in Madagascar and is active on 20 and 15 meters. QSL via I1PIN.

ANTARCTICA. ZL5ANT is reported QRV from Scott Base on 40 meter CW around 1600 to 1700z. 8J1RL is QRV on 40 and 20 meter CW from Showa Base. CE9OH is QRV from O'Higgins Base at 2300 to 0200z.

INDONESIA. Tjok, YB0RX, states the IOTA Dxpedition to Tukang Besi Islands has been rescheduled for March 1997. They will use the callsign 8B8WI. 8B8KB, worked on 40 meter CW and other frequencies, was a PIRATE.

A tidbit from

The Ohio/Penn Dx PacketCluster

DX Bulletin No. 289

OH0, ALAND ISLAND. From January 31st through February 2nd, OH1NX, OH1NYP, OH1TX and OH2BH (returning from his XX9TR operation this past weekend) will activate OH0NYP on 160 meters. The variety of other callsigns may be heard on the higher bands. The 160 meters station will transmit 1825 kHz, especially focusing on the JA and U.S. openings.

Also, members of the Contest Club Finland will be working CQ 160 Meter Contest as OH0AM from Aland Islands. They are especially looking for the USA and Japan with their new antenna. Operators are OH1EH, OH1MDR, OH6EI and OH6YF.

Outside the contest, Harry, OH6YF, will be looking for the WARC band QSOs as OH0MYF.

COMING EVENTS

FEBRUARY 8-9TH CQ WW RTTY CONTEST

A.N.A.R.T.S. News Bulletin 945 9 February 1997

COLS COLUMN

YOU WILL RECALL LAST WEEKS EPISODE REGARDED JOSEPH HENRYS
EXPERIMENTS WITH ELECTRO MAGNETS AND 'INTENSITY' AND
'QUANTITY' BATTERIES. HE CONNECTED A LARGE SINGLE CELL
'QUANTITY' BATTERY TO AN ELECTRO-MAGNET THAT HAD JUST A FEW
TURNS OF WIRE. BECAUSE THERE IS LITTLE RESISTANCE IN THE
BATTERY AND IN THE WINDING A HEAVY CURRENT FLOWED, PRODUCING A
POWERFUL MAGNET, FOR THE HEAVY CURRENT MADE UP FOR FEW TURNS
OF WIRE ON THE MAGNET.

IF ONE HAD AMPLE SUPPLY OF WIRE AND INCREASED THE NUMBER OF
TURNS, THE CURRENT WOULD BE REDUCED DUE TO THE EXTRA
RESISTANCE OF THE WIRE. AS MENTIONED ABOVE THE RESISTANCE OF
THE BATTERY IS SMALL, SO ALL THAT WILL AFFECT THE VALUE OF THE
CURRENT IS THE NUMBER OF TURNS. IF THE NUMBER OF TURNS IS
DOUBLED THE CURRENT IS HALVED BUT THE STRENGTH OF THE MAGNET
REMAINS THE SAME.

THIS IS PRECISELY THE EXPERIMENT THAT HENRY PERFORMED.
REMEMBER WE HAVE THE BENIFIT OF HAVING LEARNT ELECTRICAL
THEORY, HENRY DID NOT. HE CONTINUED HIS EXPERIMENTS WITH A
HIGH VOLTAGE, HIGH RESISTANCE OR 'INTENSITY BATTERY' TO USE
HENRY'S WORDS. HE CONNECTED A HIGH VOLTAGE BATTERY TO A MAGNET
WITH FEW TURNS AND A HIGH CURRENT FLOWED IN SPITE OF THE HIGH

RESISTANCE OF THE BATTERY, IT WAS CAUSED BY THE HIGH VOLTAGE.

SAY A BATTERY HAS A RESISTANCE OF 200 OHMS WITH A VOLTAGE OF 50 VOLTS. IT IS CONNECTED TO A MAGNET WITH A RESISTANCE OF 1 OHM. BY OHMS LAW THE CURRENT WOULD BE 50 VOLTS OVER 201 OHMS. IF WE DOUBLE THE NUMBER OF TURNS ON THE MAGNET THE RESISTANCE IS DOUBLED, MAKING THE TOTAL RESISTANCE 202 OHMS. THE CURRENT WOULD BE 50 VOLTS OVER 202 OHMS, HARDLY ANY DIFFERENCE, LESS THAN HALF OF ONE PERCENT.

HOWEVER THE MAGNETIC POWER OF THE MAGNET IS ALMOST DOUBLED BECAUSE THE INCREASED RESISTANCE IN THE WINDING IS VERY SMALL RELATIVE TO THE TOTAL RESISTANCE. HOW FAR CAN WE ADD TURNS TO THE WINDING BEFORE MORE IS LOST THAN GAINED? HENRY'S EXPERIMENTS SHOW THERE IS LITTLE ADVANTAGE TO BE GAINED AFTER THE RESISTANCE OF THE WINDING HAS BECOME EQUAL TO THE RESISTANCE OF THE BATTERY. IN THE WORDS OF MODERN ELECTRICAL ENGINEERS 'THE RESISTANCE OF THE LOAD (THAT IS THE WINDINGS) MUST BE ''MATCHED'' TO THE RESISTANCE OF THE POWER SOURCE (THE BATTERY)'.

HENRY'S DISCOVERY WAS AND STILL IS OF THE GREATEST IMPORTANCE IN COMMUNICATION ENGINEERING AND NEXT WEEK WE SHALL HAVE A LOOK AT HOW AFFECTS HIGH RESISTANCE RECEIVING EQUIPMENT.

THATS ALL FOR THIS WEEK, STAY TUNED, DE COL VK2CTD.

ANARTS AT WYONG

ANARTS WILL BE THERE AT WYONG. COME AND MEET THE COMMITTEE MEMBERS AND ASK THEM YOUR QUESTIONS ON RTTY, AMTOR, PACTOR AND THE OTHER DIGITAL MODES WHICH ARE SO SUCCESSFUL ON HF (AND CAN BE USED ON VHF AND UHF AS WELL).

WE DO NOT KNOW WHERE THE STAND WILL BE, BUT WE WILL MAKE SURE THERE ARE SIGNS TO GUIDE YOU. COME AND VISIT US AT WYONG RACECOURSE OBN 23RD FEBRUARY ON THE OCCASION OF THE CENTRAL COAST AMATEUR RADIO CLUB FIELD DAY.

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT
(31 JANUARY - 06 FEBRUARY)

ISSUED ON 07 FEBRUARY 1997

SUMMARY
Date 31 01 02 03 04 05 06
10cm 72 71 78 80 81 75 74
A 10 5 10 6 4 5 (11 ESTIMATED)
T 12 6 8 -3 -1 22 28

SOLAR ACTIVITY WAS LOW ON 2ND FEBRUARY, AND VERY LOW
OTHERWISE.

THE GEOMAGNETIC FIELD AT LEARMONTH, W.A. WAS QUIET, OR MOSTLY
QUIET, ON 31ST JANUARY, 1ST AND 4TH OF FEBRUARY; QUIET TO
UNSETTLED ON 2ND TO 3RD, AND 5TH TO 6TH.

FREQUENCIES WERE NEAR PREDICTED MONTHLY VALUES EXCEPT FOR A 30
PER CENT ENHANCED PERIOD DURING LOCAL NIGHT ON 6TH. SPORADIC E
WAS PRESENT DURING LOCAL DAWN HOURS ON 2ND, AND SPREAD F WAS
REPORTED DURING LOCAL NIGHT ON 6TH.

FORECAST (07 FEBRUARY - 13 FEBRUARY)

SOLAR: VERY LOW

GEOMAGNETIC: UNSETTLED 7TH TO 9TH, WITH A CHANCE OF ACTIVE
CONDITIONS DURING LOCAL NIGHT; QUIET THEREAFTER.

FREQUENCIES: MOSTLY NEAR PREDICTED MONTHLY VALUES, WITH A
CHANCE OF MILD DEPRESSIONS AFTER LOCAL DAWN ON

8TH AND 9TH.

Courtesy IPS Radio and Space Services.

VK2SG RTTY DXNOTES FOR WEEKENDING 31 JAN. 1997 (BID RTDX0131)

We surely must say tnx to all of VK0IR team for their effort
and a special one to Peter, ON6TT for the rtty operation.
Surely it has been a record, statistics say 80,673 contact
with 2056 qsos on rtty during their stay.
It has been a busy week with the VK0IR operation; really
each one must be happy I feel also the west coast guys. But
look on sunday 26th it has been reported three different
stations on the band all of them listening up; let us hope u
have got the right one.....
Our thanks this week go to: ZS5S, W2JGR,WB2CJL, W5KSI, AA5AU,
WX5L, KB2ZP, WS7I, ON4BX, PA0HVF, DF2KU, DL7AFV,
IK1HSR,I2PKF,I5KG,I5IGQ, I1JQJ and the 425 DX gang, DJ3IW and
the Central-Europe DX Cluster DB0SPC the NJ0M Node of
Minnesota and the IK5PWJ Cluster.

NOTES OF INTEREST:

BARBADOS, 8P. AA4NC and K4MA will operate from 27 Feb. to March 4 as 8P9Z on all bands and modes including RTTY. Qsl via K4MA.

ST. PETER and ST. PAUL ROCKS, PY0. Randy, WX5L who has loaned the equipment for rtty, reports that Karl, PS7KM and

Tino, PT7AA will be leaving on 1st February. They hope to be qrv as ZY0SK and ZY0SG starting from 5 February for about two or three weeks.

The VK2SG RTTY DXNOTES are also available on Internet at reflector digital-dx(at)st.rim.or.jp. See also the OH2BUA WebCluster at URL http://www.clinet.fi/jukka/webcluster.html.

For next week's bulletin send your bandpass to Bob, WB2CJL at W5KSI.(hashsign)NOLA.LA.USA.NA.

Gl de (DX2) Luciano, I5FLN at ZS5S.ZAF.AF

ARLD007 DX news

This week's bulletin was made possible with info provided by Randy, WX5L, Michael, KO7V, Tedd, KB8NW, the OPDX Bulletin, Robert, KE2FB, Joerg, YB1AQS, and Contest Corral from QST. Thanks to all.

CAMBODIA, XU. Robert, KE2FB, is with the US Embassy, and is QRV as XU2FB. He works 80 through 10 meters, using CW, SSB, RTTY, and FM on 10 meters. QSL via N4JR.

BANGLADESH, S2. Hannes, DL3NEO, Mar, DL3DXX, and Joerg, DL8WPX/YB1AQS will arrive in Dhaka on February 2, and will be QRV as S21ZX and possibly S21XY. Activity will be on all HF bands, although emphasis will be on the low bands. QSL both calls to DL3NEO.

TURKS AND CAICOS ISLANDS, VP5. Steve, N9CK, will be QRV as VP5/N9CK from February 4 to 11. Activity will be mainly CW and RTTY. He will also be QRV during the WPX RTTY contest using the callsign VP5CK. QSL to N9CK.

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 290. EXCERPTS

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, ARRL DX Bulletin, AD1C, K1HT, K3DI, K7BV, KO7V, W7TSQ, K8KS, N8BJQ, KX9X, DL8WPX, EA5KB, F5OZF, F6AJA, PS7AB and ZS5S for the following DX information.

S2, BANGLADESH. By the time you read this, Hannes/DL3NEO, Mar/DL3DXX and Joerg/DL8WPX/YB1AQS should have arrived in Dhaka. Mar and Joerg will stay until February 14th and Hannes until the 17th. Activity will be on all HF bands (sorry NO satellite operations this time). A 20m/66ft Titanex vertical and beverage-parts will be in their luggage. Also included

will be a RTTY modem and other antennas such as a R7, R-7000
and wires.

V2, ANTIGUA. Sean, KX9X, and Matt, NM9H, will be active from
February 12-19th, from the Caribbean super-station V26B. They
will be on CW, SSB, RS-12, and maybe RTTY.

COMING EVENTS

FEBRUARY 8-9TH CQ WW RTTY CONTEST

SAGEM TELEPRINTER PART WANTED

VICTOR VK3BVJ IS LOOKING FOR A 'MODULE BOARD' FOR A SAGEM
TX20 TELEPRINTER. IF YOU HAVE ONE OF THESE BOARDS FOR
DISPOSAL YOU CAN EITHER SEND A MESSAGE TO COL VK2CTD AT VK2WI
WHO WILL PASS IT TO VICTOR DURING THE SUNDAY CAST CALLBACKS.
OR YOU CAN CONTACT VICTOR VK3BVJ QTHR.

ALSO YOU COULD BRING THE MODULE TO THE CENTRAL COAST FIELD DAY
AND GIVE IT TO COL ON THE ANARTS STAND FOR ONWARD RELAY TO
VICTOR.

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065
Australia, for such matters as membership and general
enquiries. Enquiries can also be made by packet to the
President (Col) VK2CTD at VKWI2, or the Secretary (Pat) VK2JPA
at VK2WI.

Email addresses

Broadcast officer patl(at)pitt.conmusic.su.oz.au
or patl(at)extro.ucc.su.oz.au

President colin.davies(at)dse.com.au
or c.davies(at)sunink.com

What a source of entertainment. This newsgroup is more fun than "Gator Steaks" on 3895 on Friday nights back in the 80's. Lets see now, we have the no-coders and the anti no-coders. We have the "Big Al" wanna-be down there in Florida. We have lively discussions on being ARRL members and also complete election opinion polls from time to time. And who could ever forget those now famous "Burtisms". I think it was also the start of a new software product that just recently hit this newsgroup. So see, all you ney sayers, this group CAN BE FUN. Wasn't it Rodney King who axed (I mean asked) "Can't we all just get along"? Well Rodney, this group just wouldn't be the same.

Hmmm... 'the validity of a gay amateur radio club,' huh?
the *point* is if you start with a poor basis, nothing you build on top
will ever be any better...homosexuality **HAS** those problems and more
than sufficient proof that they are against nature...now try to convince
people tyhat you are 'normal' and recruit people to your group (misery
loves company) now to further flaunt your problem and use ham radio as
your forum makes me sick.now build a 'club' on top of that and you
have a predictable result... a sick club. All to recruit
victims(partners)[if not so then why even mention homosexuality at all?
or should we also have 'DELTA - the Heterosexual Radio Club' ?]

As the saying goes, 'There's no right way to do a wrong thing'
any you LAMBDA and related groups are sick.

(no 73, I am anti AIDS and refuse to take the chance)

In article <jlowmanE5I5II.7v8@netcom.com>,
Jim Lowman <jlowman@netcom.com> wrote:

[woes of club inactivity deleted]

I've been involved in two Rhode Island clubs for the past five years. One club -- the Ocean State Amateur Radio Group -- was RI's largest club with almost 300 members. There I was a member for four years, and served as a board member-at-large and treasurer for two of those years. For the past three years I've been an active member of the Associated Radio Amateurs of Southern New England (W1AQ), where I have served as Vice President and Secretary for two years.

Eventually I had to give up and quit OSARG, because the politics associated with all the little clicks in the club became too overwhelming to deal with. At the club's six business meetings each year, there was little discussed except a bunch of arguing about club by-laws and other political issues of the moment. The club almost never did anything related to amateur radio -- in the four years that I was a member we had >one< picnic, and never a field day.

Apparently a lot of other people also got fed up with the nonsense, because the last I heard membership was down to something like 150 members, and the club's officers (once one of the 'clicks' fighting for control of the club) are now experiencing the same problems with the 'newer' clicks forming in the club.

W1AQ, on the other hand, is a joy to be a member of. The club has its own clubhouse, club station, and has a membership limit of 50 members. Although we don't have people banging down the door to join, we have maintained our membership at around 50. However, I must admit that over the past two years I have become concerned about activity in the club, because activity has dropped off considerably -- we still have a two-station field day each year (about 15 members show up) and have a monthly meeting (where 15 members show up). Last September we ran a 70th anniversary special event station (where we made over 1,000 contacts in a 24-hour period) and had about a dozen club members show up to operate and participate.

What concerns me about activity in AQ is that the "newer" hams that join the club do not stay active. Most of the active members are 'old timers' (I jokingly say that the signal-to-cane ratio is quite high in our club) and when new people join they stay active for six months to a year and then drop off and do not renew their membership. Our "base" membership of 35-40 members is getting older, and I've noticed that the Silent Keys plaque on the wall (euphemistically referred to as the "Death Plaque" or

"Vanity Calls Short-List") has been getting progressively larger since
I became a member, and I can see the day coming when we have
10 or so "active" members that regularly show up to club functions.

Having been involved in both large and small clubs, I can definitely
say that smaller clubs are better. You do not get the political clicks
forming as much (if at all, we have none at AQ) and everyone knows one
another on a much more personal level. I still remember the first
business meeting that I attended as a new member there was an item on
the agenda to raise the membership cap from 50 to 75 members. During
the discussion phase of the motion, I gave a short speech about clubs
and why they should stay small. I explained how I joined AQ because it
was small, and people knew one another like family members. After the
meeting was over, I had several 'old timers' come over and congratulate
me on what they thought was an excellent speech and succinct point of
view.

Smaller clubs do have problems though. Smaller means less revenue.
Less revenue means you can't do as much as bigger clubs, like setting
up a large repeater network or maintaining a clubhouse and club
station, without major financial sacrifices on the part of members.

>I don't blame the Internet so much. The issues that I'm aware of are a) a
>couple of sticky political issues and b) the feeling that some of the OTs
>have been on the Board for too many years.

Yes, these are typical feelings that newcomers have. In one respect
I agree with Pasternack's comments a while ago that newcomers into
the hobby do not seem to be joiners (i.e. they do not join local
clubs). Those that do join local clubs seem very intolerant of
existing viewpoints and believe that the club should change to meet
their expectations. This is one reason why we had so many personality
problems in OSARG that rendered the club ineffectual.

I recently picked up a C-line. Since I was off the air for twenty-some years, say from the time of the 2B to the early 90s, I am greatly ignorant of the whole culture of these rigs. I like 'em a lot on CW. Got all the filters, noise blanker, etc.

I hear a lot about the Sherwood mods. What are they? Had any? Like em? Worth it? Still available?

Please e-mail me directly at radio@udel.edu.

Thanks.

Bob N9GG Frankford Radio Club Manager, Ham Radio Outlet, Delaware

>hear is sold in such small quantities that it's probably hard to justify
>the development cost for very many true custom ICs ...

I need my above-mentioned custom ICs due to having two unrepairable
80s-era radios; custom ICs were used in those rigs and are no longer
available.

>Correction #4 ... even if there is a truly custom IC, you can order the
>part
>and replace it yourself a lot faster than sending the rig in for repair

"Supplies are exhausted" was the response from the factory.

>(if you have a clue, that is)

I find it ironic that my over 30+ year-old radio gear still works FB yet
the few modern boxes I own sit collecting dust due to being unrepairable.
And of course, my homebrew gear (with its archaic discrete component
construction) continues to work flawlessly.

3364. RFI into answering machine

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-12 00:00:00 UTC
From: "P. Stemish" <stemish@tlg.net>
Message-ID: <3302B990.15FB7483@tlg.net>
Source record: 204785

My roommate's answering machine is triggered by the RF from my HF rig. I've put ferrite coils around the phone line and it still gets set off by my transmitting, recording my SSB-distorted voice in the process. Can anyone recommend a fix short of putting the machine in an RF-proof box? Is there any brand of answering machine that ISN'T affected by RF in this manner? (the current one is a Radio Shack special, I believe.) Thanks.

QST QST QST.....calling all FARTS. There is a FARTS club in Fremont, CA & one in Florence, OR. I would like to find others around the country to set up a "Worked All FARTS" certificate.

FYI: FARTS stands for "Fremont Amateur Radio Transmitter Society" KF6IHQ and Florence Amateur Radio Transmitter Society"

Conatct:
Don W6IQ
For snail mail address is in call book under W6IQ or N6FNL.

I have done exactly this from time to time. I found that CW accounted for much less than 40% during my impromptu observations. When I posted my observations I was severly flamed by the procode factions. Truth is the first casualty in any religious war and I guess I have to accept that.

3367. Chris Greenhalgh FAQ -- PLEASE READ

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-12 00:00:00 UTC
From: kmhebert@seas.gwu.edu
Message-ID: <5drjpu$nin@felix.seas.gwu.edu>
Source record: 204818
Cross-posted to: alt.mcdonalds,alt.food.mcdonalds,rec.radio.amateur.misc,alt.radio.pirate,rec.radio.amateur.digital.misc,comp.os.ms-windows.misc,rec.radio.amateur.policy,alt.support.diet,talk.politics.animals,rec.radio.amateur.equipment,rec.games.chess.misc

THE CHRIS GREENHALGH FAQ
Available http://www.seas.gwu.edu/student/kmhebert/chris.html

This FAQ is Copyright 1997 Kevin M. Hebert. Any use of it without permission of the author is illegal.

This FAQ is intended to provide an objective view of Chris Greenhalgh, and while some commentary is involved, the majority of this FAQ is posts made by Chris Greenhalgh. His own words are allowed to speak for themselves. Therefore, an information between the words "BEGIN AUE and END AUE may be cited freely. Those words are the words of Chris Greenhalgh.

This FAQ will be posted twice monthly on alt.mcdonalds, alt.food.mcdonalds, rec.radio.amateur.misc, alt.radio.pirate, rec.radio.amateur.digital.misc, comp.os.ms-windows.misc, rec.radio.amateur.policy, alt.support.diet, talk.politics.animals, rec.radio.amateur.equipment, and rec.games.chess.misc.

1.) Who is Chris Greenhalgh?

Chris Greenhalgh is a member of the USENET community. He is a frequent poster on alt.mcdonalds, alt.food.mcdonalds, rec.radio.amateur.misc, alt.radio.pirate, rec.radio.amateur.digital.misc, comp.os.ms-windows.misc, rec.radio.amateur.policy, alt.support.diet, talk.politics.animals, rec.radio.amateur.equipment, rec.games.chess.misc, and is an infrequent poster on other newsgroups. He is widely considered to be a net-cop and spammer by other members of these groups.

2.) Why is Chris Greenhalgh considered a net-cop?

Chris has sent email to the system administrators of various netizens. He has done this for several reasons. The most common has been emailing sysadmins when someone from one of the newsgroups has sent Chris an email he did not like.

3.) Does Chris Greenhalgh believe he is a net cop?

No. Chris considers a net-cop to be someone who tells others what to do in Usenet newsgroups. However, even with this limited condition, Chris is still a net-cop. He ordered several users of the alt.mcdonalds newsgroup to take a discussion to email. This was just one example of Chris' chronic hypocrisy. When Kevin Hebert asked Chris to leave the alt.mcdonalds newsgroup in 1996, Chris posted news accusing Kevin Hebert of harboring a desire to take over the group and somehow control it. And yet, when Chris did a similar thing, Chris did not feel he was a net-cop.

4.) Why is Chris considered a spammer?

Chris' posts, at least to alt.mcdonalds and alt.food.mcdonalds, are nearly always off-topic. Alt.mcdonalds has long been a newsgroup which could tolerate the occasional off-topic post, and most posters put up off-topic posts from 10 to 50 percent of the time. This leaves an at worst 1:1 signal:noise ratio. In Chris' case, up to 100% of postings in a given week are off-topic. The ones that are on-topic are generally replies that accuse another posting of lying or making up information about the topic at hand (for factual evidence, see http://www.dejanews.com and search under Chris Greenhalgh).

ACTUAL USENET EXAMPLE (AUE)
Subject: Re: Big Rip-Off
From: cgreenha@magnus.acs.ohio-state.edu (Christopher K. Greenhalgh)
Date: 1996/10/11
Message-Id: <cgreenha.759.325E5E7A@magnus.acs.ohio-state.edu>

>: : Where's the "racial tone"? All he said was that they speak Chinese.
>: : I don't consider it racist when someone says I speak English, or that my
>: : friend speaks Italian. . . . Get a life!

>: Agree re portion about speaking a language; I feel "... Yellow, ..." adds
>: a racial tone.

So you "feel" when someone calls me "...White..." or OJ Simpson "...Black..."
that is a "racial tone"??

Christopher K. Greenhalgh, N8WCT

END AUE

What does this have to do with McDonald's? Nothing. There are abundant other examples available via DejaNews.

The other major spamming Chris does is his posting of the alt.mcdonalds FAQ. This FAQ, written by Kevin Hebert and contributed to by many others, is copyright material. Chris Greenhalgh downloaded a copy of it, made cursory changes, and took credit for it in the form of putting his name in the From: header. This FAQ differs little from the original accepted FAQ. For the original FAQ, see http://www.seas.gwu.edu/student/kmhebert/alt.mcdonalds.html for an excellent page showing the cursory changes Chris made, as well as what he copied verbatim, see http://home.sprynet.com/sprynet/awilhelm/mcfaq.htm The red represents what Kevin wrote and Chris left behind. The black represents what Kevin wrote and Chris stole. The green represents Chris' additions.

5.) Can you describe Chris Greenhalgh's hypocrisy in more detail?

Certainly. Note: most of the following AUE's come from Chris's post "
Re: ATTN: Christopher Greenhalgh -- give us a break!", message-id
<cgreenha.587.32519F90@magnus.acs.ohio-state.edu> posted 10/01/1996.

>No, no, no, Chris. You deal in exact words. You can't now change your
>mind and say "well that's what I meant," or "it means the same thing."

Sure I CAN.

END AUE

Here, Chris claims that he can say one thing, then change his mindd
later as to what it means. In many other exchanges, however, Chris holds
the poster to the letter of their word. The next AUE also shows that Chris
holds others to a high standard:

BEGIN AUE

>That's NOT what you said. Are you amending your statement now?

Fact is, I cant remeber what i said. :)

END AUE
That last one is particularly hypocritical, considering the following AUE:

Subject: Re: Court System (was Bloody Chicken Nuggets)
From: cgreenha@magnus.acs.ohio-state.edu (Christopher K.
Greenhalgh)
Date: 1996/12/10
Message-Id: <cgreenha.838.32AD8F14@magnus.acs.ohio-state.edu>

BEGIN AUE

Sorry Molly...better look again, you mis-quoted me.

There was a question mark at the end...that makes it a question.

When quoting someone, it may behoove you, and your creditbility
to do so accuratly.

END AUE
Chris often calls people "proven liars" when they make mistakes. Well, in
message-id <cgreenha.838.32AD8F14@magnus.acs.ohio-state.edu>

Chris says the following:
BEGIN AUE

I have in the past participated in off-topic threads...but no longer do
so.

END AUE

That post dates from 12/10/1996. Since then, Chris has made dozens of
off-topic posts . . . including the one containing that quote.

Chris also calls people names, even though (in message-id
<cgreenha.563.32505D31@magnus.acs.ohio-state.edu>) he says he

doesn't:

BEGIN AUE

Just read some of your childish and immature name calling posts...you dont
see
me doing that...I dont have to resort to that level to make a point, or
win any
debate with you.

END AUE

And yet, on rec.radio.amateur.misc, message-id
<cgreenha.326.319DCF5E@magnus.acs.ohio-state.edu>. Chris calls someone a
bigot:

BEGIN AUE

>>Try to ignore drew. He is a narrow minded bigot, who will attack you,

END AUE

And in message-id <cgreenha.334.3184D106@magnus.acs.ohio-state.edu>
Chris says:

BEGIN AUE

This is a medical fact, but still off topic for this group. I will no
further
comment about it here, as it would only be responses to ignorant
uneducated
buffoons anyway.

END AUE

And in message-id <cgreenha.334.3184D106@magnus.acs.ohio-state.edu>,
Chris states:

BEGIN AUE
Is that right? Out of all the messages I got over this, all but 2 agreed
with
me, and stated, in so many words, that you are a homo-phobe buffon, who
has his
head up his a**. (direct quote from one writer)

END AUE

Note that here, he does not directly call names, yet obviously is
directing these names at the victim. There are innumerable other examples.

6.) What do others think of Chris Greenhalgh?

Chris has been referred to as a "pompous ass" (message-id
<199701290337.UAA07695@user2.inficad.com> et al.), a "fuckhead"
(message-id <azzy-2407961232060001@news.io.com>), a "moron"
(message-id <519g1t$2e9@felix.seas.gwu.edu> et. al.), an "idiot"

(message-id <52u7pg$ros@felix.seas.gwu.edu> et. al.) and other names.

However, Chris seems to think that "everyone" is in agreement with
him. Not a selct group of people, not the majority, but "everyone". The
classic example is excerpted for you here:

BEGIN AUE

Subject: Re: LAMBDA
From: cgreenha@magnus.acs.ohio-state.edu (Christopher K.
Greenhalgh)
Date: 1996/04/29
Message-Id: <cgreenha.334.3184D106@magnus.acs.ohio-state.edu>
Newsgroups: rec.radio.amateur.misc

BEGIN AUE

You may have THOUGHT it, but everyone and myself knows the truth (fact)
about
HIV and AIDS.

END AUE

In other words, "everyone" knows the truth about AIDS. In that case,
why is the government spending so much money on AIDS education?

7.) What does Chris Greenhalgh think of others?

Chris thinks very little of anyone but himself. He tends to attack
people who disagree with him. Here are a few examples.

BEGIN AUE

Subject: Re: What can you do??
From: cgreenha@magnus.acs.ohio-state.edu (Christopher K.
Greenhalgh)
Date: 1996/10/02
Message-Id: <cgreenha.741.3252AD3C@magnus.acs.ohio-state.edu>

>So, based on your "feeling" you can dismiss my statement and/or feelings?

I dismiss your statement about being insulted based on how you post, and
what
you. I believe you fabricated the statement, in an effort to argue a point
that you were not winning.

END AUE

In other words, Chris doesn't think someone was insulted by a post he
made, and hence that person is a "liar".

BEGIN AUE

Subject: Re: Let's get on with the Stupid Customer Bashing!
From: cgreenha@magnus.acs.ohio-state.edu (Christopher K.
Greenhalgh)

Date: 1996/09/11
Message-Id: <cgreenha.482.32371FF7@magnus.acs.ohio-state.edu>

>> Try to ignore Tom...he has no constructive input for the group...just
>> immature name-calling, grade school antics, and unsolicitated
>> insults.

[response snipped]

Oh...and I forgat to say...Tom is a proven liar as well.

END AUE

Yet another person who Chris considers "immature", a "liar", etc.

BEGIN AUE
Subject: Re: ATTN: Christopher Greenhalgh -- give us a break!
From: cgreenha@magnus.acs.ohio-state.edu (Christopher K.
Greenhalgh)
Date: 1996/10/02
Message-Id: <cgreenha.592.3251E0F6@magnus.acs.ohio-state.edu>

I attack no one...more fabrications from you.

END AUE

BEGIN AUE
Subject: Re: What can you do??
From: cgreenha@magnus.acs.ohio-state.edu (Christopher K.
Greenhalgh)
Date: 1996/09/25
Message-Id: <cgreenha.529.3249C75C@magnus.acs.ohio-state.edu>
B

Untrue Kevin...another lame attempt by you to discredit me.

I can have a very thorough debate, without resorting to name-calling and
insults.

END AUE

BEGIN AUE

Subject: Re: What can you do??
From: cgreenha@magnus.acs.ohio-state.edu (Christopher K.
Greenhalgh)
Date: 1996/10/01
Message-Id: <cgreenha.575.325156B6@magnus.acs.ohio-state.edu>

(yawn) Look up the word "prove" Kevin.
[...]

"Aha!"? Gee Kevin...it must really excite you when you think you have won
something over me, eh?

I should have guessed...I mean...all you do here is follow me around here anyway.

Do you play any sports Kevin?

[...]

I only call people who are immature, that conduct themselves that way.

And of course, only people who are proven liars are labled such by me.

And again, you put your foot in your mouth Kevin...I have NEVER called James
immature, childish, OR a liar.

END AUE

BEGIN AUE

Subject: Re: Court System (was Bloody Chicken Nuggets)
From: cgreenha@magnus.acs.ohio-state.edu (Christopher K. Greenhalgh)
Date: 1996/12/10
Message-Id: <cgreenha.837.32AD5AD9@magnus.acs.ohio-state.edu>A
You are a liar Mr. Ortis, and Im glad others are seeing what you really are.

I NEVER flamed you in any way. You are the one on the immature offensive.

>He grammar flamed me
>and when I challenged, he didn't have the courage to respond.

Because I dont post off-topic to Usenet, and dont wish to waste my time with your childish and immature insults.

END AUE

BEGIN AUE

Subject: Re: One total moron
From: cgreenha@magnus.acs.ohio-state.edu (Christopher K. Greenhalgh)
Date: 1996/09/17
Message-Id: <cgreenha.658.323EC9D2@magnus.acs.ohio-state.edu>

Kevin Hebert is a liar...I NEVER claimed or indicated the FAQ was/is my "own work".

END AUE

There are literally hundreds of other examples available at http://www.dejanews.com.

8.) What does Chris Greenhalgh think of himself?

A lot. This is how he justifies his various other problems.

9.) What is Chris Greenhalgh's problem?

It appears to be an inability to separate fact from fiction. Example:

BEGIN AUE

Subject: Re: An open letter to Chris Greenhalgh (Was: Re: Militant
Vegetarianism)
From: cgreenha@magnus.acs.ohio-state.edu (Christopher K.
Greenhalgh)
Date: 1996/04/08
Message-Id: <cgreenha.274.3169005B@magnus.acs.ohio-state.edu>

Here are some facts Kevin:

1. My sig is smaller than yours, and follows netiquette guidlines.
2. I have not, and do not call names.
3. I do not participate in off-topic (vegan) threads.

END AUE

10.) What can be done about Chris Greenhalgh?

An email campaign to his postmaster, root@magnus.acs.ohio-state.edu
or postmaster@magnus.acs.ohio-state.edu is the start. This document has
been emailed to those people. Please contact Kevin M. Hebert
(kmhebert@seas.gwu.edu) if you have further information to contribute to
this FAQ.

Source record: 204820

Hi, I have had a idea concerning converting the Fisher Price Units over to
a small, cheap repeater. I would be great for hamfests and such. As it
would have no ID, you would have to ID for it. It should not be to hard to
re-xtal the units over to 6 meter. The low power would not be a problem in
this application, really a plus. Any comments?

I am considering buying an Alpha 91B but have heard very litle about how the amp really stacks up to some of the other HF amps out there. I would love to hear from any of the owners of this amp and their station set up and what they really think about this amp. Please I want to hear both the good and the bad if there is any and if there is any bad how ETO handled it. Thanks for reading this and please respond if you don't mind taking the time. 73, DE-KS4HK, Steve

3371. Announce: RF Propagation (LOS & Diffraction) Windows freeware

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-12 00:00:00 UTC
From: cseymour@crl.co.uk
Message-ID: <5ds0h6$ebt@eagle.crl.co.uk>
Source record: 204822

I have uploaded to Simtel.Net:

http://www.simtel.net/pub/simtelnet/win3/ham/rfprop.zip
ftp://ftp.simtel.net/pub/simtelnet/win3/ham/rfprop.zip 69546 bytes

rfprop.zip Radio Propagation & Diffraction calc. v1.01

This is a radio frequency propagation calculator for the transmission path between an RF transmitter and a receiver. It is aimed mainly at short range radio applications, such as in-building LAN and point-to-point links up to a few km where there is a direct line-of-sight or a simple diffraction profile, or a modified range law model, but it can also support calculations for satellite, aeronautical and space communications where the line-of-sight model can be applied. It is useful to both ham operators and radio professionals.

The knife-edge diffraction calculation option allows the effects of a hill or other obstruction to be taken into account. Loss factors can be included, e.g. building penetration loss.

Maximum range and path budget margin are rapidly calculated and viewed while modifying the input parameters conveniently using the main graphic window. The parameters are displayed against a bitmap of radio stations and a hill to visually aid entry of the various parameters. A text- mode window can be opened up to list the results, with additional information, and then output to an Ascii file. A built-in help file includes information about the various parameters and calculated results.

Special requirements: Windows 3.1, also 95 & NT compatible.

Freeware. Uploaded by the author.

[1017]

C l o s e d C i r c u i t A d v i s o r y

The following advisory is not necessarily for transmission over amateur radio. This is just a reminder that the address for the Newsline Support Fund is:

Newsline
c/o Andy Jarema-N6TCQ
P.O.Box 660937
Arcadia, California
91066

Again, and as always, we thank you. This ends the closed circuit with Newsline report number 1017 for release on Friday, February 7th, 1997 to follow.

(*****

The following is a QST

Powerline safety comes to the world wide web thanks to ham radio. This story and more on Newsline report number 1017 coming your way right now!

(*****

POWERLINE SAFETY ON THE WWW

A Georgia ham has set up a site on the world Wide Web dedicated to promoting safety in dealing with overhead power transmission lines.

Andrew Funk, KB7UV is the Assistant News Operations Manager at WAGA television in Atlanta. For the past year he has been working on safety

guidelines for those involved in Electronic News Gathering. This, as a result of reports from around the country where engineers and reporters were hurt or killed when the mast of a news gathering van was inadvertently extended into overhead power lines.

While the guidelines were developed primarily for broadcasters, Andy believes that this material might be of interest to Radio Amateurs as well since the powerline contact accident procedures were developed in cooperation with the safety department of Georgia Power. You can find it by taking your computer over to the Internet and then going to

http://www.wagatv.com/eng

courtesy of Andrew Funk, KB7UV.

(*****

ARRL ELECTIONS AND THE INTERNET

And in case you have not noticed, more and more ARRL election campaigns, and even some recall campaigns, are going world wide over the Internet. In the past year or so you have probably noticed announcements from several candidates in local and regional League elections posted to the Internet news groups. Some candidates have posted campaign literature to the World Wide Web and sent it as e-mail to national ham radio news outlets.

Obviously, these candidates are hoping for some added recognition that will help put them over the top. This is a far cry from the old days when candidates in League elections paid little attention to anyone outside their geographic area. Obviously it also signals another way that the world wide web is changing the face of ham radio.

By the way, it is Newslines policy is not to comment on League elections until after the results are in.

(*****

ARRL MEMBERSHIP UP IN 1996

The ARRL says that its membership is growing despite the latest negative figures in overall growth in the hobby. The League says that it ended 1996 with its largest membership in history.

The grand total was 175,023, up 1,461 from the previous month. This is an increase of 3,574, or approximately 2.1% from a year earlier. By comparison, in 1995 League membership showed a decline of about 0.6%.

Demographically, the Southeastern Division is now the largest, overtaking the Atlantic Division for the first time. The Rocky Mountain Division posted the largest percentage increase for the fifth time in the past six years.

(*****

ARRL TO OFFER WEEKEND HAM CLASS

And the ARRL is going into the ham radio training business. Beginning in March, the League will sponsor three Amateur Radio licensing classes, to be held at ARRL Headquarters in Newington, Connecticut.

Classes will cover the Technician class test elements and an upgrade class will instruct the General class theory. Each class will include proper amateur operating procedures and repeater etiquette. There will also be a radio and test equipment display and demonstration.

Instructing will be Ed Hammond, WN1I. Ed is a well known author and lecturer and a ham for 25 years. Technician licensing classes will be held March 14, 15 and 16, and April 11, 12 and 13. A General theory upgrade class will be held April 25, 26 and 27. Classes will run from 6 to 10 PM on Friday evening, and from 9 AM to 5 PM on Saturday and Sunday.

If you know someone who is interested in ham radio, tell that person that he or she can see a part of ham radio history at the same time. Advance registration is required and thee is a fee for this class.

(*****

WA4SIR TO SPEAK AT DAYTON BANQUET

A well known ham has been named as the banquet speaker of the Dayton Hamvention. Ron Parise, WA4SIR will address the crowd in Dayton on Saturday night the 17th of May.

Ron came to fame in the world of amateur radio when he pioneered packet radio from the Space Shuttle in December of 1990. The mission was STS-35 aboard the Columbia. And Ron held dozens of voice QSO's with fellow hams all over the world. In addition to the packet operation on that early day SAREX mission. He had to wait almost three years to fly. After the Challenger put a hiatus on manned space flight.

Later, Ron flew again aboard STS-67 aboard the Endeavor in March of 1995. Using voice and packet again very effectively for SAREX. In deed, Ron Parise a key member of the SAREX team.

Working from his home base at the Goddard Space Flight Center as an engineer scientist, WA4SIR is not an astronaut, he is a payload specialist. The payload NASA calls ASTRO-1 is his specialty.

Astronauts are pilots or mission specialists. Ron handles a highly technical payload. So sophisticated that is calls for very special operation. He plans to give details that, as well as highlights of his missions at the Dayton Banquet on the 17th of May.

And here is some good news for those of you wondering how to get to and from the Hamvention site once you get to Dayton. According to its planners, Hamvention has found a replacement for those costly hotel buses that have discontinued running. Instead they have arranged with a taxi cab company to have a number of cabs at Hara Arena along with a curbside starter to facilitate the operation.

And here is the good part. The cab company agreed to a flat rate between the local hotels and Hara Arena. In other words, the rate charged will be per trip depending on distance, instead of a per person fee.

The Hamvention has also added free bus service to and from Dayton Mall and the University of Dayton Arena. They will also continue the free buses to and from Hara Arena from the Air Force Museum, Forest Park, the Salem Mall and the KOA Campgrounds.

(*****

MITNICK SENTENCING AGAIN DELAYED

The sentencing of computer hacker Kevin David Mitnick, N6NHG, on parole violation and cellular telephone fraud convictions will be reset after a February 24th hearing on motions filed by his new lawyer. The defense and the prosecution agreed to postpone the sentencing date while the defense files some new motions. Mitnick's sentencing has been delayed twice since he changed attorneys last September.

These charges are separate from a new twenty five count indictment returned last September. It alleges that Mitnick stole proprietary software from manufacturers, damaged University of Southern California computers and stole computer passwords. That complaint also alleges Mitnick and an accomplice used cloned cellular phone codes to make their calls and computer connections untraceable. Mitnick has pleaded not guilty to those charges.

(*****

ARCC ON THE WWW

The Area Repeater Coordination Council which is the VHF and UHF frequency coordination group for Eastern Pennsylvania and Southern New Jersey has just updated their online repeater database. You can reach it on the Internet at:

http://www.arcc/inc.org

According to K3NXU, area hams can review the database for your club's coordination information.

ARCC is not the only coordinator on line. We have found several by using the Alta Vista and Yahoo search engines on the world wide web. Use the words ham radio and coordinator in your search request.

(*****

HAMTRONICS WEB SITE

Jerry Vogt of Hamtronics Incorporated has announced that his company has a new site on the world wide web. One of the things found on the Hamtronics web page is the company' 1997 catalog and other special information. You can check it out at:

http://www.hamtronics.com

(*****

ORLANDO HAMCATION

The 1997 Orlando HamCation and Computer Show, sponsored by the Orlando Amateur Radio Club, will be held on February 14, 15 and 16, in Orlando, Florida. The Orlando HamCation is the second largest hamfest in the southeastern U.S. with over 400 swap tables, 150 commercial exhibitors and the largest tailgate area in the southeast.

For further information about the Orlando HamCation, please visit the Orlando Amateur Radio Club's home page at:

http://www.cycat.com/users/oarc

(*****

TULSA HAMFEST

This years Tulsa Green County Hamfest in Tulsa will feature a special guest appearance by Roy Neal, K6DUE. Neal was supposed to be last years banquet speaker but was forced too beg off when do to last minute health reasons. This year the planners say that Roy has again accepted their invitation and will be there.

The Tulsa Green County Hamfest will be held March 15 and 16. For more information on this event go to their internet home page at:

http://www.greencountry.com/hamfest

(*****

SISTER ALVERNA IMPROVING

Some names in the news and some good news. First, Patrick Tice, WA0TDA reports that Sister Alverna O'Laughlin, WA0SGJ, of the Handi-Hams spent Christmas at her mother house in Assisi Heights. Sister Alverna was injured in an auto accident last May.

(*****

ARRL HONORS HAMS

The American Radio Relay Leaue has bestowed honors on several hams. Dr. Robert C. Smithwick, W6JZU, and Mr. Ken Kirk-Bayley, GJ0KKB, have won the ARRL International Humanitarian Award for 1996. The two are the co-founders of MediShare International, a program of the Medical Amateur Radio Council.

James Jacobs, K1GHT, was tabbed for the ARRL Certificate of Merit in recognition of his lifetime of humanitarian service and goodwill through Amateur Radio.

Also, Michael Pilotti, N3IRZ, also won an ARRL Certificate of Merit in recognition of his arranging for the travel of Ukraine radio amateur Nick Bortnick, UX0ZZ, to the United States for special medical care.

(*****

ALBANY APPOINTMENT

Albany County New York ARES Emergency Coordinator George Odom, KB2SIY, has appointed April Stack, KA2QIG, as Assistant E C for Public Information. KA2QIG also serves as an ARRL Public Information Officer. Her new appointment was announced at the combined County RACES and ARES Christmas dinner held in Albany.

(*****

WISCONSIN TEEN NET

And Tony Olivero, N9ZWM is 14 year old ham and the net control of a Teen Net on the W9UDU repeater. The system is on 147.27 MHZ. It covers southeastern Wisconsin and northern Illinois. The net meets on Thursdays at 7:00PM Central time. Tony says that all teens in its coverage area are invited to check in and take part. You can contact Tony via the Internet to:

N9ZWM@aol.com

(*****

SCHOOLS SELECTED FOR STS-83 SAREX CONTACTS

Sixteen schools, including institutions in the People's Republic of China and on Okinawa, have been picked for scheduled SAREX contacts during NASA's STS-83 space shuttle mission. The tentative launch date is March 27th.

Three hams are scheduled to be aboard the shuttle Columbia. They are Mission Commander James Halsell, KC5RNI, Payload Commander Janice Voss, KC5BTK, and Donald Thomas, KC5FVF, mission specialist.

The STS-83 flight is scheduled to last 16 days and will carry a SAREX station that is configured for voice and packet. The mission's primary payload is the microgravity science laboratory.

(*****

DAYTON ARC ZIPCODE CONTEST

The Dayton Amateur Radio Association, the same people who bring tou the annual Dayton Hamvention, has a novel contest that the club is sponsoring during 1997. The object of the DARA FM Zip Contest is to work as many amateur stations in as many different United States postal Zip Codes as is possible. This using FM on the recognized national simplex frequencies in the 2 meter, 1 and a quarter meter and 70 centimeter bands.

Only FM voice is permitted, with the contest running from 19:00 UTC to 23:00 UTC on April 6th, June 8th, August 10th, October 5th and November 30th of this year. The first outing of this new contest took place on February 2nd, but that was to late to make this weeks newscast.

(*****

DX

DX wise, the Island DX News reports W1BIH will be active as PJ9JT from Curacao through March 30th. Activity will have an emphasis on CW, with operations on 160 through 10 meters. QSL via W1AX.

Also, ZS6EZ who serves as the QSL Manager for ZS8RI, reports that a lot of people are losing their QSLs mailed to him because they put "Edward and Marion Island" on their envelopes. ZS8IR's QSL route is via ZS6EZ in South Africa. Whatever you do, never put Edward and Marion Island on the envelope.

And, K8PYD, from the 8th Area QSL Bureau would like to remind everyone with a new vanity call sign to send new SASE envelopes with your new callsigns on them. Also, you should still send an envelope or two with your old callsign on it just in case some cards continue to show up over the next few years at your QSL bureau.

(*****

FISTS

Finally, have you ever hear of FISTS. FISTS is a special interest group with an interest in preserving the use of Morse code and to perpetuating its use on the ham radio bands. This, by encouraging friendships on the air and making it fun to use the code. FISTS wants hams to want to learn CW. Not because is simply a requirement for operating on the high frequency bands. Rather, because CW can be a neat thing to do and allows them to communicate with a skill they can be proud of.

The group was formed in England by G3ZQS in 1986 as an Elmering and Ragchewing type club. Ironically, even with the moves to delete the code as a mandatory licensing requirement, FISTS is growing at a phenomenal rate as more and more hams seek information. For more information about FISTS contact Nancy Kott, WZ8C, the North American FISTS Representative at her Callbook address or by e-mail to:

nancy@tir.com

Harry:

I think you will have a hard time finding a 7th edition or newer of the RADIOTRON DESIGNER'S HANDBOOK. The last was the 4th Edition and I believe the last printing was in 1957. This is the big red book and the 1957 printing has several more pages in the appendix. I do not know of any later printings. Be advised that this book is very pricey these days and can cost upwards of $100.00 and even more.

This was a subject of discussion on the Boatanchors-List a while ago....

73 and good luck!

Debunks? Tune down to the CW subbands and listen for lids. You won't hear any. The "CW lid filter" means those who know and use CW as their primary mode are generally very well-behaved.

That there are lids on SSB who've passed a code test only reinforces the notion that even the riff-raff can learn 13wpm Morse.

Do you understand now?

>likes to do this and what he reports is true. If as much energy was put

While I myself do not like nor do I intend to use code and would like the
code requirements reduced for expanded HF privileges, the above arguement for
keeping 5 WPM is the most valid I have heard. If we are to maintain our
existance as being able to provide emergency communications, we must be able
to perform in worst case situations. That means for most of us the ability to
send and recieve code. This is just plain common sense and certainly
fullfills the minimum requirement to do so.

Now if only we could all get behind a common sense proposal, get it done and
over with, so we could get on to the next series of arguements, or just all
get onb our radios and communicate, what a concept. I will be there, won't
you join me?
73's all

Try taking your own advice. That you resort to attacking the person usually means that you have no valid intelligent arguement.

Now I am sure that you will have some profound or profane comment for me.

3383. Ideal budget/compact antenna for TENTEC Scout

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-12 00:00:00 UTC
From: Will White <will.white@asu.edu>
Message-ID: <3301C553.551B@asu.edu>
Source record: 204834
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc,rec.radio.amateur.equipment

What would be the best 40-20-15-10 antenna for an apartment dweller, at under $150? I have considered the MFJ 16010 random wire, and the MFJ 1621 portable whip/tuner. I am limited to a <20' vertical setup, or a sloper/wire up to 30'. So, what should I do? I am running a TENTEC Scout, 50W PEP.

--Will

3384. Phonetic alphabets (Alpha Bravo Charlie Delta) (revised)

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-12 00:00:00 UTC
From: Brian.Kelk@cl.cam.ac.uk
Message-ID: <5dsjj3$skl@lyra.csx.cam.ac.uk>

Archive-name: radio/phonetic-alph/full
Posting-Frequency: six weeks

Phonetic Alphabets (Alpha Bravo etc)
February 1997

There is a widely known alphabet Alpha Bravo ... Yankee Zulu.
Such alphabets are variously known as phonetic/radio/
spelling/telephone alphabets, and the term analogy alphabet
is also used. This collection currently includes alphabets
for the following languages:

English, French, German, Dutch, Flemish, Spanish,
Portuguese, Italian, Romansh, Danish, Norwegian,
Swedish, Finnish, Czech, Slovak, Polish, Hungarian,
Croatian, Serbo-Croat, Romanian, Turkish, Hebrew,
Russian, Swahili, Kwanyama, Ndonga, Afrikaans,
Chinese and Esperanto.

This posting supersedes the one of 30th December. Changes
are minor. (There is a summary of recent changes in the Web
page mentioned below).

My thanks to the many contributors, not all of whom are
acknowledged below.

Please report any errors. Please also mail or post any
further information or anecdotes, or additional references.

In my capacity as the editor of this collection I have no
objection to the further electronic distribution of this
posting in full in circumstances where it is likely to be of
interest, and where a document of this length is acceptable;
in the case of Web pages I ask that care be taken, as it is
easy to mangle something. Note that there is also a brief
version of this collection.

A copy of this article and some other material can be found
on the World Wide Web at:

<http://www.cl.cam.ac.uk/users/bck1/menu.html>

Copies of this article may also be found at:

***** ENGLISH *****

The NATO phonetic alphabet:

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India
Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo
Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

[This alphabet dates from about 1955 and is approved by the International Civil Aviation Organization, the FAA and the the International Telecommunication Union; note that different bodies prefer different spellings, so one also sees: Alfa Juliett Juliette Oskar Viktor]

[The alphabet above is from the Cambridge Encyclopedia of Language. An alphabet with Alfa X-ray can be found in The U.S. Department of Defense Dictionary of Military Terms. Alfa Juliett X-ray appears in A Concise Dictionary Of Slang And Unconventional English]

[UK police use Indigo(??) instead of India.
German army handbook 90/91: Alfa Foxtrott Juliett.
Italian version: Alfa Charly FoxTrot Giuliet Romio Wiskey.
An Indonesian phrase book: Beta Ultra Volvo Whisky X-ray.
A precursor of the present alphabet (1952?) had: Alfa Coca Metro Nectar Siera Union Whisky Extra]

Phonetics for digits (from an amateur radio FAQ):

zero one two tree fower fife six seven eight niner

From the Cambridge Encyclopedia of Language:

zero wun too tree fower fife six seven ait niner

'Telecom B':

[Note similarity to Apples Butter Charlie]

Alfred Benjamin Charles David Edward Frederick George Harry Isaac Jack King London Mary Nellie Oliver Peter Queen Robert Samuel Tommy Uncle Victor William Xray Yellow Zebra

[Found also in Swedish, Dutch, Hungarian telephone directories. An 'analogy alphabet' in a Kenyan directory

has Charlie and no Y. A Swiss directory: Andrew Charlie Lussy Queenie Sugar. French/German vocabulary books: Andrew Charlie Lucy Mike Nelly Sugar Xmas. English phrase books for Spanish/Italian speakers: Charlie]

'British A':

Amsterdam Baltimore Casablanca Denmark Edison Florida Gallipoli Havana Italia Jerusalem Kilogramme Liverpool Madagascar New_York Oslo Paris Quebec Roma Santiago Tripoli Uppsala Valencia Washington Xantippe Yokohama Zurich

[An 'international' alphabet in a Dutch telephone directory has: Danemark. A 'French' alphabet in a Hungarian directory has: Cassablanka Danemark Que'bec Upsala Zu"rich.
An 'international' alphabet in a business book for French has: Italy Kilogram Zu"rich; the corresponding book for German has: Italy Kilogram Xanthippe Zu"rich]

[West Berlin telephone directory 1965: Danemark Je'rusalem Madagaskar Que'bec Upsala Xanthippe Zu"rich.
Santa Fe (Argentina) 1955: Dinamarca Habana Jerusale'n Kilogramo Nueva_York N~andubay Upsala Wa'shington Xantipo Yokoama.
Azores 1966: Danemark Ita'lia Jerusale'm New-York Que'bec Upsala Yokoham]

Bombay telephone directory 1962 (also a later source):

Army Brother Cinema Doctor English Father Gold Hotel India Jam King Lady Mother Navy Orange Paper Queen Raja Sister Table Uncle Victory Water X-ray Yellow Zero

Kenyan and Tanzanian telephone directories 1966:

Africa Bombay Charlie Durban England Freddie George Harry India Japan Kenya London Mombasa Nairobi Orange Peter Queen Robert Sugar Tanga Uganda Victory William X-Ray Yellow Zanzibar

Johannesburg telephone directory 1965:

[Note similarity to Alfred Benjamin]

Arthur Betty Charlie David Edward Frederick George Harry Isaac Jane Kate Lucy Mary Nellie Olive Peter Queen Robert Simon Thomas Union Violet William X-Ray York Zero

Malayan telephone directory 1964:

Australia Bombay China Denmark England Fiji Ghana Hongkong India Japan Kedah London Malacca Norway Osaka Penang Queensland Russia Singapore Turkey Uganda Victoria Wales X'Ray Yokohama Zanzibar

Used by police in New York City:

[Note similarity to ARRL and Western Union]

Adam Boy Charlie David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Peter Queen Robert Sam Tom
Union Victor William X-ray Young Zebra

[Variants: Eddie Larry Nancy Thomas Yankee Yellow]

Used by police in Nassau County, Long Island, New York:

Adam Boston Chicago Denver Edward Frank George Henry Ida
John King Lincoln Mary Nancy Ocean Peter Queen Robert Sam
Thomas Union Victor William X-ray Young Zebra

Used by police in San Diego, California:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Queen Robert Sam Tom Unit
Victor William Xray Yellow Zebra

Used by police in Hutchinson, Kansas:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Q.. Robert Sam Tom Union
Victor William X-ray Yankee Zebra

Alternative phonetics sometimes used unofficially in amateur
radio:

America Boston Canada Denmark England France Germany
Honolulu Japan Kilowatt London Mexico Norway Ontario/Ocean
Pacific Radio Santiago/Spain Tokyo United Victoria
Washington Yokohama Zanzibar

[Also: Amsterdam, Baltimore, Brazil, Chile, Egypt, Finland,
Geneva, Greece, Guatemala, Hawaii, Italy, Kentucky, King,
Luxembourg, Montreal, Nicaragua, Portugal, Romania, Russia,
Sweden, Texas, Uruguay, Venezuela]

The ARRL (American Radio Relay League) alphabet (1948):

[Note similarity to Western Union and Able Baker]

Adam Baker Charlie David Edward Frank George Henry Ida John
king Lewis Mary Nancy Otto Peter queen Robert Susan Thomas
union Victor William x-ray young zebra

[Nowadays the ARRL endorses the NATO/ICAO/ITU alphabet]

Pre-1954 U.S. Navy Radio Alphabet:

(Communications Handbook, 1945)

[Note similarity to Able Buy Cast]

Able Baker Charlie Dog Easy Fox George How Item Jig King
Love Mike Nan Oboe Peter Queen Roger Sugar Tare Uncle Victor
William X-ray Yoke Zebra

"Used by Armed services of USA & GB" (ARRL Handbook, 1945)

Able Baker ... Easy ... Tare ...

Allied Services 1945:

Able Baker ... Edward ... Tape ...

From a book entitled "The Complete Morse Instructor..." (1944):

Able Baker ... Easy ... Tare ...

RAF 1943-56:

Able-Afirm ... Item/Interrogatory ... Jig/Johnny ...
Nab/Negat ... Peter/Prep ...

[In similar alphabets: affirm, cast, hypo, inter, negat,
option, over, prep]

RAF 1942-43:

Apple Beer Charlie Dog Edward Freddy George Harry In
Jug/Johnny King Love Mother Nuts Orange Peter Queen
Roger/Robert Suga Tommy Uncle Vic William X-ray Yoke/Yorker
Zebra

[cf. aircraft in Dambusters raid: A-Apple B-Baker C-Charlie
E-Easy F-Freddie G-George H-Harry J-Johnny K-King L-Leather
(officially L-London) M-Mother N-Nuts O-Orange P-Popsie
S-Sugar T-Tommy W-Willie Y-York Z-Zebra]

Western Union:

Adams Boston Chicago Denver Easy Frank George Henry Ida John
King Lincoln Mary New_York Ocean Peter Queen Roger Sugar
Thomas Union Victor William X-ray Young Zero

British Army 1927:

Ack Beer Charlie Don Edward Freddy George Harry Ink Johnnie
King London Monkey Nuts Orange Pip Queen Robert Sugar Toc
Uncle Vic William X-ray Yorker Zebra

RAF 1924-42:

Ac Beer Charlie Don Edward Freddie George Harry Ink Johnnie
King London Monkey Nuts Orange Pip Queen Robert Sugar Toc
Uncle Vic William X-ray Yorker Zebra

Royal Navy 1917:

Apples Butter Charlie Duff Edward Freddy George Harry Ink
Johnnie King London Monkey Nuts Orange Pudding Queenie
Robert Sugar Tommy Uncle Vinegar Willie Xerxes Yellow Zebra

U.S. Army 1916:

Able Buy Cast Dock Easy Fox George Have Item Jig King Love
Mike Nap Opal Pup Quack Rush Sail Tape Unit Vice Watch X-ray
Yoke Zed

British forces 1904:

Ack Beer C D E F G H I J K L Emma N O Pip Q R Esses Toc U
Vic W X Y Z

[The OED has a reference for Beer and Emma dated 1891]

3386. FORSALE:HEATH MOST ACCURATE CLOCK.

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-12 00:00:00 UTC
From: kovar@zeus.ia.net
Message-ID: <5dsmct$t45@hera.ia.net>
Source record: 204837

I have a HEATH MOST ACCURATE CLOCK II FOR SALE.

It displays 24hr or 12hr. Has alarm.

It can be interfaced into master clock to be updated/sync to

WWV time base. Has battery back up for Alarm too!

I took it out of the box and read the book once.

I have all the original goodies with it.

Let me know if you are interested?

I will attempt to sell it for reasonable offer in next two days.

Then to the Hamfest on Sunday.

Thanks,

Jack Kovar

3387. IMPORTANT!!!

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-12 00:00:00 UTC
From: Clif <avvid@onramp.net>
Message-ID: <3301E36D.6AA9@onramp.net>
Source record: 204838

I am writing you this to inform you of a very important matter currently under review by the FCC. Your local telephone company has filed a proposal with the FCC to impose per minute charges for your internet service. They contend that your usage has or will hinder the operation of the telephone network.

It is my belief that internet usage will diminish if users were required to pay additional per minute charges. The FCC has created an email box for your comments, responses must be received by February 13, 1997. Send your comments to isp@fcc.gov and tell them what you think.

Every phone company is in on this one, and they are trying to sneak it in just under the wire for litigation. Let everyone you know hear this one. Get the e-mail address to everyone you can think of.

Alert everyone in your addressbook, and most importantly the subject line should have "CC Docket No 96-263". FULL NAME AND ADDRESS SHOULD ACCOMPANY THE EMAIL otherwise it will be deleted. Again, the email to FCC is
isp@fcc.gov

More information can be found at the FCC website:
http://www.fcc.gov/isp.html

^^
Cut everything above and send this to:

isp@fcc.gov

I am writing in response to the proposal made by telephone providers to the FCC. I do not think it is the best interest of the general public, nor is it in the best interest of the economy of the United States. The proposed "per-minute" charge scheme would be highly damaging to the fledgling economy developing across the computer networks in this country.
It would also be harmful to researchers, students, and government agengies across the country and world-wide. If per-minute charges are allowed to take effect, the effect would be a reduction of consumer interest, and a stagnation of academic progress and communications. I urge you to deny the proposal as it would deny many people the right to fast communications, as they would no longer be able to afford the charges. Many non-profit organizations and research groups would have a much more restricted access to this indispensable mode of communication. I urge you to do what is right for the general public of the United States, and for its many invaluable organizations. Please do

not grant telephone providers' proposal as it is a monopolistic measure and would contribute to the rapid decline of services involved with the internet. You should consider how much economic damage this proposal will do to local access providers, major access providers (e.g. AOL), and universities as these groups attempt to develop and improve the communications and services provided on the internet. They would be hard pressed to deal with this new burden. Thank you for your time and consideration.

Sincerely,

(your name here)

Clif

Thank you very much, Kevin, for your accurate FAQ about our friend Mr. Greenhalgh. As you know, he has called me practically every name in the book on this newsgroup over the past several months. When I would ask him to refrain from the name-calling and debate the issue, he would then resort to accusing me of engaging in illegal activities and other such nonsense.

Worst of all, he posts this drivel from an Internet account of a public university. Our tax dollars at work.

The purpose of this FAQ is to allow people to have a resource they can
cite when dealing with Chris Greenhalgh. Wherever I quoted him, I cited
message-ids for verification. The original posts are available via
DejaNews. Therefore, by citing this FAQ, people can respond to Chris much
more concisely. If used properly, it will svae bandwidth.

Interesting idea, although I am not familiar with the Fisher Price baby monitors. There might be other uses that don't immediately to mind. Well, if you did put an ID on it, then you could use it as a 6 meter monitor!

In message <5drorq$rgk@acmey.gatech.edu> - wt2@prism.gatech.edu (William C. Thompson)12 Feb 1997 01:44:10 -0500 writes:

Hi, I have had a idea concerning converting the Fisher Price Units over to
a small, cheap repeater. I would be great for hamfests and such. As it
would have no ID, you would have to ID for it. It should not be to hard to
re-xtal the units over to 6 meter. The low power would not be a problem in
this application, really a plus. Any comments?

Fine. Let the greedy slobs do it. They'll kill their own goose that laid the golden egg and it will be a blessing in disguise for us as it will speed up development and implement of new and superior means of access...cable modems, direct-satellite, etc. More reliable, no busy signals, and amazing bandwidth.

I don't know Chris Greenhalgh from Adam, but I object to your lengthy flame about him posted under the disguise of a "FAQ" spammed to numerous usenet newsgroups.

Your claim that it provides "an objective view" is not accurate, and your stated intention to repost the message on a periodic basis is a total abuse of the usenet concept.

Hans

: been quite inactive on Ham Radio.

I can't comment on your club, but ours seems to be suffering some of the same problems. Out of 188 members, we had 15 at the monthly meeting on Friday; six of which are Board members.

I've been Treasurer for nearly two years, and have yet to meet some of the members.

We have cancelled our Christmas dinner, and the annual picnic may go the same way. We may also drop back to a two-transmitter effort for Field Day, due to lack of interest in operating. We had over 100 people stop by last Field Day, but the operating position was vacant at one of thestations most of the time.

I don't blame the Internet so much. The issues that I'm aware of are a) a couple of sticky political issues and b) the feeling that some of the OTs have been on the Board for too many years.

: I geuss socioty has changed & we have changed & radio has
: changed. Back when I had no computer, no packet, only 1 job, & just a
: Heathkit tube rig, it was a little more fun than it is today. My first
: contact, my first special event experience, my first field day were all
: memorable. Maybe they will be fun again someday.....If they stop
: expanding 11 meters! 73

FWIW, it seems that everyone has way too many demands on their time these days, and something has to give. It's unfortunate that it has to affect the club, though.

I'd be interested in others' thoughts on this issue...as if I'd need to ask!

:-)

Just saw an update on that article in this month's issue- including
the missing diagram from the original article. Problem is, I believe
that it was CQ not 73!

Basic 2m J pole with swivel made from PVC "cross" to allow placement
of reflector/ director elements.

You mean that after 20 years there are still countries
left that you haven't worked? That's amazing. I would have
thought that after that long any Dxer would be reduced to
county hunting, snagging oblasts, and chasing grid squares
on microwave.

****
FCC Seeks Access Fee Comments
****

The Federal Communications Commission is asking for input
from the online and telecommunications industries to help
it rule on the imposition of access fees on Internet
Service providers.

The access fees imposed on long-distance telephone carriers
as a means to reimburse local telcos for the use of their
equipment and to fund improvements to the telephone
infrastructure. Internet services have been excluded from
the access fees since 1983, but the phone companies believe
that the online industry should shoulder a portion of those
costs.

The issue is complicated. It is obvious that increasing
data transmissions will eventually bring the need for massive
expansion of the telephone infrastructure, and some telcos
have begun plans to move all data traffic to a new, high
speed network separate from that used for voice calls.

But the online industry largely believes that it does pay a
fair share of the cost for local telco access -- through the
monthly fees paid for business telephone lines.

One thing that is clear is that the facts will need to be
clarified and documented before the FCC makes a decision on
the access fee issue.

Those who wish to provide input of comments to the
FCC on this issue should send their statements via e-mail to
isp@fcc.gov prior to the February 21 deadline. (This is
the published Deadline for Comments on the NOI to the
NPRM).

Let's see... will they make sure the only people who get this are
lawfully elegible? Personally, I think such things go far beyond the scope
of scanning... then again, simply the topic of how exceedingly insecure
such systems are is worth being raised. Yet another reason hard encryption
should be free and unrestricted.

3417. FS: 37' Telescoping Mast - $30 <San Jose, CA>

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-12 00:00:00 UTC
From: gvs@netcom.com
Message-ID: <33021e5a.85243654@192.0.2.3>
Source record: 204904
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.antenna,rec.radio.amateur.misc

<<< Sale in San Jose, CA. >>>

37 foot Telescoping Mast originally designed to support a 10-80 meter inverted-V, but could be used to support a small rotor and beam (28mhz up to vhf/uhf).

Material used is schedule 80 PVC Tubing, in 4 sections, with O.D's: 3.50", 2.75", 2.25", and 1.75". The sections are held in place by a u-clamp and thru center eye-bolt arrangement. Each u-clamp has 2 outer eye-bolts, along with the thru center eye-bolt, which are used as guy points.

The bottom 3 sections use PVC sched 80 reduction union joints (very beefy) which I reamed out to allow upper sections to slide thru freely. The three over-lapping sections are over lapped by 12, 16, and 18 inches, from smallest to largest dia., respectively. Each upper section has 2 sets of 3 spacer bearings that take up the excess play inside each over-lapping section.

As you may well have gathered, I have an Engineering background and took some time designing this Telescoping Mast. It wasn't something I just threw together.

The last 2 years in San Jose, CA, has brought storms with winds as high as 75 mph. This Mast barely moved during these storms. Also, I use three sets of guys which are marine-type nylon rope that is UV resistant.

Mast is more durable and can withstand higher wind speeds than a steel mast, when guyed properly. Also, Mast doesn't interact with antenna like a steel mast would.

147.300, -600, no tone. You have to be fairly close to the park in order to access it, though. Power & antenna height is purposely kept low so that visitors can use the machine. Otherwise, it would be tied up with day-to-day Orlando amateur traffic.

Oh, I'm sooooo sorry. I didn't realize there was a law against someone enjoying both CB and amateur radio. Next time I'll ask your permission, okay? I do have a question, though...if you don't enjoy the postings, why do you read them? It should be obvious from the subject heading what the message is about. Nobody's putting a gun to your head and forcing you to read them.

>This turdhead is only a tech-plus because he's too damn
>stupid to pass the code.

Now THAT makes a lot of sense. I'm too stupid to pass the code...but yet I passed the code. What do you think Tech-PLUS means, Mr. Amateur Radio Authority? Better get off the computer and review your copy of "Now You're Talking" again.

>If the code requirements were waved, he and
> others like him would ruin what's left of the HF band.

That's right. Heaven forbid those scum-of-the-earth, unwashed, lowly no-coders should tarnish the outstanding tradition of excellent amateur operating procedures that are found on 3894.5 and 14.313. We simply MUST protect the professionalism exhibited here at all costs. Keep the code; it's our only chance!

Yes! Through the magic of the Internet and FTP, I am now proud to offer you...the distinguished readers and participants of rec.radio.amateur.misc...the opportunity to download five newly created and digitally mastered sound files! Hear for yourself why I affectionately refer to 3894-dot-5 as "The Zoo of Amateur Radio." Just listen to what you get:

1) BIG-AL-SAT-NITE-LIVE...Hear Big Al, "cranked up" and ready for a night's entertainment as he encourages and provokes his arch-rival "Pork Butt!"

2) PORK-BUTT...Listen to Pork Butt return the fire! Featuring the famous "white trash in America" monologue.

3) PIG-PEN-PETE..."HO HO, HO HO, HO" Here's our friend Pete, getting in his two cents' worth...and being severely admonished by his fellow amateurs for his efforts.

4) RALPH-THE-THIEF...Check out Big Al's response when he discovers Ralph's attempts to wreak havoc on his reception by transmitting the sounds of a BABY CRYING in Al's neighborhood!

5) THE-JAMMING-STOPS...Pork Butt on the offensive, commenting on Al's latest attacks.

It's amateur radio at it's best! Hear for yourself what I've been talking about on this forum. All original hits by the original stars of 3894.5 that made 'em famous! Digitally mastered for optimum sound quality and available NOW via your modem at the following FTP site: members.aol.com:/mnmaniac/3894.5

Don't delay! Download today! And thanks for yer support! :-)

The electric fuel pump in the tank is a major noise generator on HF.
Ford has a filter that does a good job of clearing it up.
they will install it as a no charge warranty item.

The Northeast Wisconsin Radio League of Green Bay, Wisc. announced over the air tonight that it is suspending monthly meetings. The Club has one of the best repeater systems in this area, and has probably the biggest weekly net. I'm wondering if the key to it's active demise is due to the growth of the internet. I have noticed that there is little activity on most repeaters in this area. I myself since getting on the internet have been quite inactive on Ham Radio.
It think though that the group did pretty good. I do suspect though that one individual may have broken his arm patting himself on the back. Of course he may have also short circuited his brain telling himself stooories. Certainly many of us didn't think he was that funny. What do you expect from a white Johnny Cochran!
I did serve on the board of the club for a while, but when half of the board meeting was dedicated to complaining about the other club, I felt I had beytter things to do.
I geuss socioty has changed & we have changed & radio has changed. Back when I had no computer, no packet, only 1 job, & just a Heathkit tube rig, it was a little more fun than it is today. My first contact, my first special event experience, my first field day were all memorable. Maybe they will be fun again someday.....If they stop expanding 11 meters! 73

Many of us agree that what we have on 75M is kind of childish and maybe slightly embarrassing. Anyway when locals here tried it on 2M, it wasn't all that funny. N9LDC playing the harmonica on the repeater frequency. KA9YYR talking about erections on the same freq here locally, & probably a lot worse in other cities. I don't know. .... What keeps us coming back? Back in Okinawa we had a guy in the Army, who at 47 was just about a terminal alchoholic. Anyway he crapped in his bed one Sunday morning, & everyone had to walk by at least 2 or three times for another smell! They would come back & complain some more! Why did they keep going back? Well sometimes the idiots on 3985 3898 14313 or whatever, are funny. I geuss the amateur radio purists would say there is no place for these people, but as long as they don't swear in church, I geuss I don't care. By the way, whats this I read in the newsgroups! Someone trying to pass themselves of as a CB radio personality! Wow! Anyway this brings up a whole lot of thoughts including "Why do the local "00"'s pretend to be saying one thing & doing another. We all know you are a figurehead wearing blinders. Yeah!.....What about.....PACKET GODS?..... .....&..... .....O.j.? LATER 73

3425. Nwe Yaesu FT-840 For Sale

I would love to hear from anyone interested in this subject. I am actively working on finding/building devices to use this band.

I'm supprised as well, and I'm *very* interested in this development! At the very least, I want a transceiver pair to experiment with a friend, 1.5 miles away (let alone my ISP, which is 3 miles away...). I'm picturing a transmitter/receiver interfaced to an Ethernet card in a pc, either via the AUI or TP ports. This shouldn't be too expensive, and would be of windfall benefit to have a 10Mbps Ethernet connection to the Internet!!! (Ethernet encoding requires 20Mbps bandwidth to deliver 10Mbps data throughput) The telcos won't be bringing us anything near this speed for a long time, and even then it will be outragiously priced. Cable TV companies won't do any better (except for isolated pockets), and again, they're overpriced. TCI receintly announced a big scale-back of their Internet efforts. Free airwaves are the way to go for a 'free' Internet! Talk about bypass!!! I love it for being able to give a thumbed nose and raspberry (complete with wiggling fingers!) to those that should have already provided us with reasonably priced, high speed communications. Such was the spirit that gave birth to MCI and countless (well, hundreds anyway) telcos and long distance carriers. RBOC's fear of losing overpriced leased line suibscribership has and will (IMHO) keep them from delivering high speed comms, allowing their lunch to be eaten (again!!!)!

Please contact me if you have knowledge of or interest in this NII development, equipment to use it, as well as the implied opportunities.

Attention hams:

Note that this positive observation about Drew's sanity comes from one
of his fellow CBers. Drew is absolutely OBSESSED with 3894.5, and a
couple of characters on that freq are encouraging him.

Most of the inhabitants on that frequency would just like a little peace
and quiet without all the garbage. Drew is not developing any kind of
"cure for the sickness", as John seems to think. He is simply a lost
soul looking for some attention.

Dave

>I'm really tired of hearing about all the problems in ham radio today !
>What about some solutions ??
>Any jackass can bitch about something. Put your money where your mouth
>is, and start coming up with some good solutions, then lets put them
>into use, NOW !!

I think we all recognize the problems we face.

1) Our spectrum is at hazard.
2) Our service is at hazard.
3) Our members are aging.
4) The service's growth has become stagnant.
5) The service's methods have become stagnant.
6) Too many members have lost sight of the purposes of the service.
7) Some of our members are growing unruly.

7 is a result of abandonment of enforcement by the FCC, and is
only indirectly related to the other factors. We can exert peer
pressure to cause most amateurs to behave, but without the backup
of a vigorous and sure FCC willing to take enforcement action
against the worst of us, our moral suasion loses power. Belief
that any form of testing has an effect on behavior is misguided.
It has no more effect than a driver's test has on drunk driving.
Only moral pressure and the ultimate sanction of vigorous enforcement
can curb the actions of the lawless. To believe otherwise is folly.

The only way we're going to deal with this issue is to persuade the
FCC to resume enforcement action. And the only way we can do that is
to demonstrate that the effort is worth the candle. If the service
is perceived as just a hobbyist playground like CB, then it will be
treated like CB by the FCC. We need to show that we are still a vital
service meeting our charter goals and worthy of government action to
support our efforts. (Unfortunately, too often we aren't.)

Now on to more serious matters. 1 and 2 are the result of 3, 4, 5, and
especially 6. Our spectrum is at hazard because we aren't utilizing it
effectively in relation to our charter goals, thus leaving it open to
attack by commercial interests. And our service is at hazard because
it has lost its place as a national asset, and has become in the eyes
of too many "just a hobby" with no intrinsic public worth. It has
become self-involved and has developed a fixation on the past and not
a drive toward the future.

The fact that our service is aging is an unhealthy sign that we are
failing to attract fresh blood at a sufficient rate. That our growth

is stagnant says we are not marketing amateur radio as something relevant to today's technically inclined public. And a major reason for that is that amateur radio has indeed become irrelevant due to lack of progressive action to adopt newer, better, and more relevant ideas, methods, techniques, systems, and organizational structures. In other words, we're perceived as hopelessly old fashioned, and indeed too many of us are guilty as charged on that score.

In common with all other radio services, amateur radio is chartered to render emergency communications in support of the people of our nation at times when other systems dedicated to emergency service are overwhelmed or unavailable. And in common with some other radio services, we are also chartered to perform some public service communications tasks under non-emergency conditions. Too often, we are failing to meet these goals, because too many of our members lack motivation, and because our systems have become hopelessly obsolete compared to systems available in other services. In other words, we have allowed ourselves to become technologically backward, and have in fact *insisted* on remaining technologically backward to the point where our assistance is often of little value.

Now the one thing which makes amateur radio unique among radio services is our charter goal to experiment with radio systems in order to develop SOTA communications systems, and act as a technological training ground for our members and prospective members. Amateur radio is in essence intended to be a lifelong experimental laboratory course in radio communications. We are expected to field trial new ideas, techniques, systems, and methods. And we are supposed to self-educate ourselves and our colleagues in these techniques, systems, and methods so that the service becomes a trained pool of communications experts. It should be self-evident that the expertise so gained should be relevant to modern communications needs and wants if we are to be of value to the public interest.

It should also be self-evident that the role of testing for an amateur license has the purpose of serving as an entrance exam to this learning laboratory. It allows us to demonstrate that we have the prerequisite knowledge to safely and productively exploit the learning opportunity amateur radio's experimental laboratory presents to us. Passing the exam should not be viewed as the time for learning to stop, rather it should be viewed as the time for the lifelong learning process to begin.

The root of our service's problems is mainly a matter of attitude. If we are to salvage amateur radio, we have to change the attitudes of current members toward the service and its goals and purposes. In earlier days, our service members were mainly young, enthusiastic about radio technology, and focused on the service goals which made amateur radio valuable to the public interest. We need to regain that youthful spirit (even though many of our heads are grey). We need to vigorously pursue new ways of achieving our communications goals,

and communicate those ways to others, including those who are at present merely prospective amateurs. We need to rededicate ourselves to being able to provide the best and most effective emergency and public service communications radio technology will allow.

We cannot achieve our purposes by looking backward or inward. We must be forward looking and outward looking. Instead of asking how grandpappy might have done it, we need to be asking how junior is going to be doing it in the future, and take the steps necessary to bridge the gap from where we are to where we need to be. We cannot remain insular. We must look outward and observe what the rest of the communications world is doing. Amateur radio does not exist in a vacuum. We must constantly measure ourselves against the *best* methods in use in the communications world. We need to provide amateur systems and methods which equal if not surpass those used by other services. We must regain our leadership role. Then we will be living up to our charter and serving the public interest. Then we will regain the respect of the public, and those in government, responsible for allowing us the privilege of being radio amateurs and using public spectrum.

By becoming relevant to modern communications wants and needs, we will also again attract those technically inclined members of the public we need to reinvigorate the service and perpetuate it into the 21st century. Static things are ultimately dead things. Living systems constantly change and evolve. If we want amateur radio to continue to be a living thing, and not a dead relic, then we have to welcome change and drive its evolution. We must allow the old dead things to slough off, like a snake shedding its skin, so that the new and vigorous can see the light of day.

From: pjbenner@worldonline.nl
Message-ID: <5dvhcr$j7j$10@neptune.worldonline.nl>
Source record: 204725

Hi All!

I'd like to get some information about amateur radio in
Switzerland.
I'd like to know about the legal aspects as well as about
the necesary equipment and its possibilities.
Also links to other newsgroups or sites where I could get
more information are welcome.
Reactions preferably by e-mail.
Met vriendelijke groet / With kind regards
Paul Benner

>and let live.

Hmmm. I may still have a soldering gun around here somewhere.
I haven't needed to use it in a decade or so, however. That's
part of your problem Jeff, you're so hopelessly behind the times
that you think people still use soldering guns to build modern
equipment.

Modern methods are fine for passing large files, or short conversational
sentences. And in general they'll do either under conditions where older
methods fail, and at power levels where older methods cannot compete.
They are also well within reach of any homebrewer who isn't still using
a soldering gun and scrounging obsolete vacuum tubes from antique equipment.
The power of VLSI makes that possible, and cheap.

You have to develop a higher level of abstraction in thinking about
communications systems to fully exploit the power of VLSI. And you need
to learn a few simple new techniques to build with it, but it is well
within the reach of anyone who built their own S100 computer in the
70s, or assembled a TNC2 in the 80s. And tens of thousands did, but
any who tried to do it with a soldering gun ended up with a charred
mess.

It is well past time that you updated your knowledge and skills to
those needed in the modern world instead of the dead past. If you
do, you'll find it is both easy and fun to work with modern circuits
and systems. And you'll find that those systems are far more powerful
than the ones you've been recreating over and over from decades old
manuals and magazine articles.

Note, it is fine to occasionally recreate an antique as a lark, but
to live forever in the past is a sign of serious loss of touch with

reality.

3442. I AM LOOKING FOR A MOTOROLA UHF DUPLEXER

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-13 00:00:00 UTC
From: ka2qep@webspan.net
Message-ID: <5dvj26$kp9@news.webspan.net>
Source record: 204727

Hello, I am looking for a Motorola UHF Duplexer to buy. I am currently using one from a friend. We do not know what model it is, so it is a problem trying to get another. It was originally used at 462MHZ with a 5 meg split. It seems to work fine on the UHF 440 -450 Band with a five meg split. The duplexer consists of 2 square, rectangular, cavities with a slot on each one to adjust the reject frequency. The shell is made of silver plated copper and has a pass screwdriver adjuster on the end. There is a interconnect cable which is permanently secured between the cavities. If anyone knows what model this is and, or has one for sale, please let me know. Also I was told that there is a four cavity model which will work also.

Thanks and 73, Bill DiCarlo

>that.

Gee, you mean you don't have the IC Master on CDROM? It's sure easy
to use, and takes up less space than the 25 pounds of paper it replaces.
But I suppose if you're an antique, you'll want the antique paper version,
and it is still available too. In fact, you can buy last year's version from

the publisher as a remnant for a pittance. Anyone who can't afford a nearly new copy of the IC Master can't afford to be a radio amateur.

>>Correction #4 ... even if there is a truly custom IC, you can order the part
>>and replace it yourself a lot faster than sending the rig in for repair (if
>>you have a clue, that is)
>
>Tough to troubleshoot the part if there isn't any data on it, isn't it?

The service manual for the equipment gives you enough information to troubleshoot to the component level. You don't need to know the detailed interface specs or internal organization of the part to determine if it is defective. The equipment manual will have a functional breakdown of complex VLSI parts, and that's all you need to determine if it is functioning correctly. You *do* buy the service manual for your equipment don't you? If you won't even do that, you certainly are beyond hope.

Fred, self-policing means that each of us is to police *ourselves*
in our every action on the air. It doesn't mean that we are to
police *others*. That would be other-policing, and is the role
of constituted authority.

I don't think so. All the baby Bells knew YEARS ago that the demand for this type of service would reach this level. Currently most networks are 8:1, where 8 users share one actual circuit. They decided, despite all the indicators to NOT convert to 4:1 and now they are feeling the pain. Frankly I feel the phone companies are responsible for this failure not the consumer. But, should it happen, we should not be charged a usage fee as a separate group, but the entire phone using population should be included to broaden the base and lessen the burden since they too use the same analog network as our modems do.

Let the Bells cry, they deserve to feel what it is like to NOT get what they want sometimes.

How many levels should this decision produce, 2 , 4 or, say 10 ? (e.g.
99 % certainity carrier present, 75 % certainity carrier present, 75 %
certainity no carrier or 99 % certainity no carrier).

It helps a lot if you can concentrate on the most "suspect" decisions.

Memory problems in ni-cad batteries are possible, but they are hard to duplicate even in laboratory-controlled circumstances. It is not that big of a problem in every day use, but it is possible. He is not necessarily misleading the public by saying that, but advertisers have been trying to scare the public for years by referring to this rare condition. I get a kick out of listening to hams on repeaters who say things like, "I hope this battery goes soon! I can't go to bed until it's all the way run down before I charge it! I don't want to have 'memory' problems with it tomorrow".

This is a pretty sad comment, since drew, by his actions and comments has proven himself to be little more than another dumbshit redneck bigot. You think that's good?? Why don't you ask him for a date, maybe you could go ballroom dancing together.
I have particularly strong doubts about anyone who brags, in their sig, that they have been on CB so long they still have the callsign issued by the FCC. But then he's so lame, he probably doesn't even think about it.

Try the phone filters made by K-COMM. They solved this problem for me
when ferrites didn't. They cost about $15. You plug the filter into the
phone, and the phone cord into the filter. They are available from
Amateur Radio Supply in Milwaukee, and I'm sure, many other sources.

This one's an actual proposal, though the "crying wolf" of the computer community in the past has made it difficult to convince others that it's for real.

This is a very important proposal being considered by the FCC (both as a Notice of Inquiry, Common Carrier Bureau Docket Number 96-263: Internet Access and Information Service Providers, and Notice of Proposed Rulemaking, Common Carrier Bureau Docket Number 96-262: Access Charge Reform). However, before proceeding to make comments to the FCC, I would strongly recommend reading the following page at the FCC Web Site:

http://www.fcc.gov/isp.html

which describes the NPRM and NOI in some detail (which you should really read before forming an opinion, let alone making comments), how to submit both formal and informal comments to the FCC in response to this NPRM/NOI (the distinction is very important, and may very well determine how much weight your comments are given by the FCC Commissioners), as well as on-line copies of initial comments that have already been submitted.

Michael P. Deignan (kd1hz@anomaly.ideamation.com) wrote:

: Eventually I had to give up and quit OSARG, because the politics
: associated with all the little clicks in the club became too overwhelming
: to deal with. At the club's six business meetings each year, there was
: little discussed except a bunch of arguing about club by-laws and other
: political issues of the moment. The club almost never did anything related to
: amateur radio -- in the four years that I was a member we had >one<
: picnic, and never a field day.

So...one has to ask what the purpose of having the club was?

We just worked through our constitution and by-laws revisions; not what I would call interesting. There are still some issues I'd like to see changed, but elections for the Board will be coming up in June, so we decided to wait until next month to deal with a biggie; reduction of the size of the Board of Directors.

Someone got the bright idea, years ago, that having more Board positions available would stimulate activity in the club. We now have 10 Board members, and positions are usually uncontested at election time. I'd like to see us cut down to the basic officers; President, Vice President, Secretary, Treasurer and Editor. I advanced the notion that we don't need a Past President, since we seem to recycle the same members at each election. I also proposed that the remaining Board Members' duties by absorbed by the five elected officers, or be delegated to committees.

: Apparently a lot of other people also got fed up with the nonsense,
: because the last I heard membership was down to something like 150
: members, and the club's officers (once one of the 'clicks' fighting
: for control of the club) are now experiencing the same problems with
: the 'newer' clicks forming in the club.

: W1AQ, on the other hand, is a joy to be a member of. The club has its
: own clubhouse, club station, and has a membership limit of 50 members.
: Although we don't have people banging down the door to join, we have
: maintained our membership at around 50. However, I must admit that over
: the past two years I have become concerned about activity in the club,
: because activity has dropped off considerably -- we still have a two-
: station field day each year (about 15 members show up) and have a
: monthly meeting (where 15 members show up). Last September we ran a
: 70th anniversary special event station (where we made over 1,000
: contacts in a 24-hour period) and had about a dozen club members show
: up to operate and participate.

: What concerns me about activity in AQ is that the "newer" hams that join
: the club do not stay active. Most of the active members are 'old timers'
: (I jokingly say that the signal-to-cane ratio is quite high in our club)
: and when new people join they stay active for six months to a year and
: then drop off and do not renew their membership. Our "base" membership of
: 35-40 members is getting older, and I've noticed that the Silent Keys
: plaque on the wall (euphemistically referred to as the "Death Plaque" or
: "Vanity Calls Short-List") has been getting progressively larger since
: I became a member, and I can see the day coming when we have
: 10 or so "active" members that regularly show up to club functions.

: Having been involved in both large and small clubs, I can definitely
: say that smaller clubs are better. You do not get the political clicks
: forming as much (if at all, we have none at AQ) and everyone knows one
: another on a much more personal level. I still remember the first
: business meeting that I attended as a new member there was an item on
: the agenda to raise the membership cap from 50 to 75 members. During
: the discussion phase of the motion, I gave a short speech about clubs
: and why they should stay small. I explained how I joined AQ because it
: was small, and people knew one another like family members. After the
: meeting was over, I had several 'old timers' come over and congratulate
: me on what they thought was an excellent speech and succinct point of
: view.

: Smaller clubs do have problems though. Smaller means less revenue.
: Less revenue means you can't do as much as bigger clubs, like setting
: up a large repeater network or maintaining a clubhouse and club
: station, without major financial sacrifices on the part of members.

: >I don't blame the Internet so much. The issues that I'm aware of are a) a
: >couple of sticky political issues and b) the feeling that some of the OTs
: >have been on the Board for too many years.

: Yes, these are typical feelings that newcomers have. In one respect
: I agree with Pasternack's comments a while ago that newcomers into
: the hobby do not seem to be joiners (i.e. they do not join local
: clubs). Those that do join local clubs seem very intolerant of
: existing viewpoints and believe that the club should change to meet
: their expectations. This is one reason why we had so many personality
: problems in OSARG that rendered the club ineffectual.

Why? Because of one post you don't like? Listen: to everyonw ho considers this spam, ask yourself one question: Do I know who Chris Greenhalgh is? If yes, you won't consider this spam, believe me. If you don't, then take my word for it: it isn't spam.

I have gotten several complaints from people regarding this FAQ. To a man, they have included a phrase like "I don't know who Chris Greenhalgh is, but . . . ". And my answer to them is, "If you did, you wouldn't have sent this email".

So grow up.

I see too many "I think's", followed by conjectures. If you read what is actually on the web site, you'll see that the original note is very misleading. The local phone companies are not out to charge home users, but ISP's. The FCC is recommending "no", but asking for public comment. The FCC is getting royally flamed for suggesting exactly what the flamers want.

You've been taught wrong. Read the threads here, do the research, and
make up your own mind. There is a "memory effect" but it's nearly
impossible to duplicate, even in the lab, and is not a factor in
consumer use.

>>Oh, and by the way, dude, there is no "memory effect" in nicad
>>batteries, so including that in your advertisement is misleading.

It is a BFD to plenty of folks. There are lots of cheap things that
will work in any application, and always one or two high quality items
that work better. This is one of those better quality things. I do not
mean to make anyone think that they can't use a Taiwanese piece of
junk, rigged up with duct tape and tin foil. Perhaps this would be the
most economical solution for Yugo owners to use. Like the Yugo,
gel-cells and NiCads have plenty of problems and headaches that are
very well known to users of handheld radios. Like, for instance, the
fact the Gel-Cells last only a small fraction of their quoted lifespan.
You will go through at least five or six Gel-Cells to match the life of
my battery. Now use your calculator and tell me which is "cheaper", and
don't forget to factor in the time and aggravation of shopping for
them, re-wiring the unit, etc.

And don't forget to try and charge your Gel-Cell from your car socket!
I want to see that trick, but from a distance.

The NiCad "memory effect" I mention has been the bane and the
heartache of millions of users of NiCad powered devices, including
aviation radios, cel-phones, laptop computers, and I believe all kinds
of amateur radios. Whatever the technical name for this problem is, it
exists and it is a major concern of most users of these devices. This
is why the Lithium Ion, Nickel Metal Hydride, and other technologies
were developed. These new batteries have advantages and disadvantages
too.

My product is a very useful item that offers the most user friendly characteristics, is of the best quality, and lasts the longest. If this is of no interest to the readers of this newsgroup then I apologize and I overestimated their need for good quality products. But I do not believe this is true and I will wait to see if the majority of this group agrees.

>I think the FCC will likely grant them the right to charge whatever
>they want. "Deregulation" is the way we are going;

The local telcos have NO way to differentiate the lines used
by an ISP and any other business line customer. That's there
regulatory problem. They want an FCC mandate that would
force ISPs to identify their dial in lines and then pay a surchage
of some type.

In reality, these are just plain old telephone lines that you
and I have at home except they are in an ISPs server
location. It is the USE that the telcos want ISPs to
pay for...the incoming use, not any dial out use since
literally all the ISP lines are dial-in and never used to
originate calls.

Message-ID: <3303A4B7.4B2E@k12.wcsu.ctstateu.edu>
Source record: 204756

Thanks to all reading this message. The Bethel Educational Amateur Radio Society, the BEARS, has recently had a Kenwood TS-520S HF transceiver donated to the school. The only thing missing is a power cord. We have contacted Kenwood and they no longer support this unit in any way. They don't even have an Operating Manual or schematic. We would like to get this rig up and running for the students. Can you help us out? We would appreciate very much receiving a copy of the power cord wiring diagram, schematic, or even a pin number wiring diagram so we can get on the air. If you know of someone who is willing to donate a cord or a copy of the manual, that would be nice too, but am not greedy, hi.

Please respond to:

BEARS, Bethel Middle School, Educational Park, Bethel, CT 06801

email: bears@k12.wcsu.ctstateu.edu

packet: KZ1Z @ K1UOL.ct

Thanks again for your assistance.

You know, i am starting to believe that no one READS news groups
anymore, they all just post. I say this because well, I have posted,
and posted, and yet to get anykind of response. Anyway, here is what I
have.

When getting started, remember at least the following 10-codes:

10-1 Receiving Poorly
10-4 Ok, Message Received
10-5 Relay message
10-7 Out of Service, Leaving Air (you're going off the air)
10-8 In Service, subject to call (you're back on the air)
10-9 Repeat Message
10-10 Transmission Completed, Standing By (you'll be listening)
10-20 "What's your location?" or "My location is..."
Commonly asked as "What's your 20?"
10-33 EMERGENCY NOTE: NOT an auto accident like many people think
10-42 vehicle accident
10-100 Need to go to Bathroom

Also, remember that 10-4 only means "message received". If you want
to
say "yes", use "affirmative". For "no", use "negative".

* What are the CB 10-codes?

10-1 Receiving Poorly
10-2 Receiving Well
10-3 Stop Transmitting
10-4 Ok, Message Received
10-5 Relay Message
10-6 Busy, Stand By
10-7 Out of Service, Leaving Air
10-8 In Service, subject to call
10-9 Repeat Message
10-10 Transmission Completed, Standing By
10-11 Talking too Rapidly
10-12 Visitors Present
10-13 Advise weather/road conditions
10-16 Make Pickup at...
10-17 Urgent Business
10-18 Anything for us?
10-19 Nothing for you, return to base
10-20 My Location is ..... or What's your Location?

10-21 Call by Telephone
10-22 Report in Person too ......
10-23 Stand by
10-24 Completed last assignment
10-25 Can you Contact ....
10-26 Disregard Last Information/Cancel Last Message/Ignore
10-27 I am moving to Channel ......
10-28 Identify your station
10-29 Time is up for contact
10-30 Does not conform to FCC Rules
10-32 I will give you a radio check
10-33 Emergency Traffic at this station
10-34 Trouble at this station, help needed
10-35 Confidential Information
10-36 Correct Time is ....
10-38 Ambulance needed at ....
10-39 Your message delivered
10-41 Please tune to channel ....
10-42 Traffic Accident at ....
10-43 Traffic tieup at ....
10-44 I have a message for you (or ....)
10-45 All units within range please report
10-50 Break Channel
10-62 Unable to copy, use phone
10-62sl unable to copy on AM, use Sideband - Lower (not an official code)
10-62su unable to copy on AM, use Sideband - Upper (not an official code)
10-65 Awaiting your next message/assignment
10-67 All units comply
10-70 Fire at ....
10-73 Speed Trap at ....
10-75 You are causing interference
10-77 Negative Contact
10-84 My telephone number is ....
10-85 My address is ....
10-91 Talk closer to the Mike
10-92 Your transmitter is out of adjustment
10-93 Check my frequency on this channel
10-94 Please give me a long count
10-95 Transmit dead carrier for 5 sec.
10-99 Mission completed, all units secure
10-100 Need to go to Bathroom
10-200 Police needed at ....

And FYI----------

10-codes originated in the USA and are, apparently, only used in English- speaking countries. However, no matter which codes are used in your country, be aware that there are local dialects in every urban

area and region. You have to listen to others to learn the phrases
and
codes in you area.
Be aware that the use of codes specifically to obscure the meaning of
a trans- mission is probably illegal in most countries. The
difference
is this - codes which are well known and make communications shorter
or more efficient are normally allowed.

> Why do you need to X-mit out of band anyway?

The marine band is in the 160+ MHz range, while 2m is in the 146MHz range. Unfortunately most transmitters can't over this wide of range unless they are specially built. Most ham transcievers aren't in this catagory (in fact I don't know of any that might be). To span this range you are talking about tuning over+10% in frequency. This isn't easy with high Q output stages.

I won't get into receive problems, but with 10.7 MHz IF's iimmaaggeess come to mind as being especially troublesome.

As always, your mileage will vary.

The cheaper solution is to buy another radio, IMHO.

A Yaesu FT-2500 will easily do this. The mod is in the Artsci books- you just cut a green wire. I've used this rig on the marine bands with no problem. Also have done the same with a Yaesu FT10 HT.

> Bill/KC4ZUB

If you keep it on 49 Mhz, you don't need an ID'er.. As I understand it,
under Pt 15 it is legal to operate
duplex allowing for a QRP repeater (under 100mw)

There have been a few articles in 73 and QST regarding the baby
monitors. Easiest to use a pair of 49 Meg
HT's (about $10/pr) and rig them up with COR's as a true repeater than
to use the monitors ($29+)

Good luck and have fun!

Jim..

It's not time to make noise - it's time to comment.

> I think the FCC will likely grant them the right to charge whatever
> they want. "Deregulation" is the way we are going; I was somewhat
> surprized they had to apply to FCC at all for the increase.

I suggest that all read the NPRM and NOI on the Commission's web site.
It's pretty long and deals with a lot more than just internet access.
In the section regarding the internet and information service providers,
I saw no mention of charging "per minute fees" to users. What was
suggested was that service providers pay for interstate access like
other telephone carriers.

These charges could create a cost burden on your ISP that would have to
be pass on to you in the form of higher rates or some change in the rate
structure such as "by the minute" or something.

The Commission did not go along with this idea. To quote the
NPRM, "We [the FCC] tentatively conclude that information service
providers should not be required to pay interstate access charges as
currently constituted. As we have explained throughout this Notice, the
existing access charge system includes non-cost-based rates and
inefficient rate structures. We see no reason to extend this regime to
an additional class of users, especially given the potentially
detrimental effects on the growth of the still-evolving information
services industry."

They don't want to make internet access too expensive that people won't
go online or stay online enough to provide investment incentive. But
they want a better cost and charge structure - they don't want to add
more nonsense to the exisiting structure.

The Commission wants your comments and suggestion on ways to make the
internet usuable while not bursting the local phone companies'
capacity. There are some smart people out there that might have good

ideas for getting internet users off the phone. I am not using a phone line to access my providers network - so it is possible.

The point is that NO emergency services organization has any use for CW ops
these days ... they want folks with VHF/UHF HTs and mobiles, and HF ops
with
SSB and advanced digital modes ... the latter being the preferred method of
moving volumes of traffic over long distances with speed, accuracy, and
reliability.

The probability of "CW saving the day when all else fails" has become
vanishingly
small ... we'd save many orders of magnitude more lives each year by
requiring hams
to be CPR-certified.

Visit http://www.hamradio-online.com

License data, technological, demographic, political and economic change (such as spectrum auctions) demand a dramatic rethinking of all aspects of Amateur Radio as we find our place in the 21st century. Do not underestimate the challenges we face - if we continue down our present course, Amateur Radio may fade into the static of history. We present a wide ranging, no-holds barred set of critical questions to encourage you to understand the problem and then think through the solutions.

Did you know, for instance, that the FCC rules actually prohibit innovation in modern digital communications? Did you know that our own "voluntary" band plans stifle innovation and tend to create unused bands ripe for the picking by other radio services?

43% of all hams are now Technician class licenses who operate mostly at VHF/UHF. According to a W5YI report, in 1996, the combined total of General+Advanced+Extra class hams actually declined - yet our "incentive" licensing system has all of the incentives at HF - does this make any sense?

We ask a lot of tough questions and we'd like your opinion.

That was the ticket.

Be aware that the green wire is covered in clear glue and that you have to loosen the front panel (2.5 mm hex nuts) as well as undo 5 screws to get the top plate off.

Jim (an others)

Our Club, the Copper Country Radio Amateur Association (Houghton/Hancock/Calumet -- Michigan's beautiful Upper Peninsula) is alive and well. Our Christmas party is pretty well attended, Field Day seems no better than your, but no worse -- and some of our people really enjoy it. Our meetengs ARE small, but that is often the case when people are satisfied with the way a group is being run -- a controversy really brings people out to meetings, it seems.

We have an education committee, and generally add 10-20 each year to the ranks of Amateur Radio. Another local club, affiliated with Michigan Tech, also does a great job of recruiting and trainging.

We are active in ARES and have a RACES group. We have a lot of hams working in community service events, and many are part of or working with Superior Search and Rescue.

We have old-timers (many decades in the hobby) down to my 9.5 year old son KC8FUT. We have HFer and VHFers, and boast people like WB8WKN (see the

Feb. QST about the Rocket Launch). We have contesters and anti-contesters, pro-CW and anti-CW, and a lot of good people of all ages.

I have a lot more that I could say, but I am sure you get the point: Not everywhere is the hobby on the way down. Hang in there, keep working at it, find some other hams who are enthused about the hobby and get fired up again.

Or come up a few miles north of Green Bay and visit us (meetings at 7:00 p.m. EST -- first Tuesday of each month -- almost every month). Talk to us on our repeaters, or drop us a packet note (CMXBBS or at MTUBBS).

Sure there ARE some problems and differences out there -- we have them too. There is competition for people's time. But if you love the hobby (any part of it) there is always something you can do to make it better: teach a child, fix an old radio, talk to an old0timer who has a lot of memories to share. Enjoy!

Hope things get better for you all!

3495. Help: I want to become a Ham

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-13 00:00:00 UTC
From: Viking <viking@add-inc.com>
Message-ID: <01bc1971$bfc3a480$2b08aacf@viking.add-inc.com>
Source record: 204800

I was all hyped up to get into amateur radio a while back but then I had kids
and was too busy and too broke. Now I'm thinking about it again and I am looking for advice on how to proceed. I have the following questions:

1)What is the best way to get started as far as the different licenses goes? I studied Morse Code in preparation way back when but never used it, therefore I have forgotten all but I am willing to re-learn. I was think I would re-learn CW so I could do 5wpm and then take the code test, the Novice exam, and the Technician exam all at the same time to become a Technician-plus from the start; is this possible? From reading the Radio Shack manual it seems like this would be allowed since you can now enter as either a Novice with code or a Technician no-code but the rules are not crystal clear to me.

2)There must be some good shareware out there for learning/practicing for both the written exams and the code test. I just found NuMorse and NuTest on the Internet today but I have not had a chance to try them yet. Are they OK or is there something better out there?

3)My biggest confusion is about equipment, about which I know next to nothing.

a)Transeiver:I would like to be able to operate across as many bands as possible and with sufficient power (within whatever my license would allow) without having to have a separate transceiver for everything, if that is practical.
With what little (very little) knowledge I have gathered in the last couple of days I have been steered towards the Icom 706 because it includes 2 meter and HF in one unit. Would I be missing out on a lot if this was all I had? What bands does the term HF include? What goes on below 2 meter? Would I maybe be better off with 2 separate transceivers?

b)Antenna(s):Yikes, what do I get and where do I put it? I could stick a dipole in my attic or mount a vertical antenna outside. My guess is that the vertical would give better performance but it is a guess. I am lucky enough to have a two-story house on a hill so that is good. Would I have to attach a tower to the side of my house for a vertical antenna or can I just stick it on the roof? Is the antenna grounded like my TV antenna? Someone suggested that I should get a multiband antenna for some bands and a Yagi for the rest, I don't know which bands would be covered by which antenna but I am sure that the best transceiver suffers if the antenna chosen is poor. I am assuming I would have an antenna switch to go from antenna 1 to antenna 2 to dummy load to ground to make my life easier. Do most modern transceivers automatically match impedance to the antenna?

c)Money: I do not mind spending extra if it is going to make a difference. I am torn between going really basic on equipment and trying to get started for about $500 or spending $1500 (MAYBE $2000) for EVERYTHING to get a really nice serious setup. I figure my computer cost me more than that and in 3 or 4 years it's worthless while good amateur radio equipment should last me a while. I just want to do it right the first time which is why I'm posting this long request for experienced advice.

4)Miscellaneous silly questions:
a)Since I have a computer the possibilities of linking it with amateur radio intrigue me. What are the possibilities? I have read a little about RTTY and packet radio but I do not yet understand how they work in practice. Any explanation of how computers and radio can be used together is welcome.
b)sidepaddles: I read somewhere that these allow you to execute perfect dits and dahs, any comments?
c)amateur television: I have also read blips about receiving/transmitting television over amateur radio frequencies. What extra equipment would this require and how does it work?

Many thanks to those who take the time to respond. I know this is a long-winded information request but I really want to do this right the first time instead of stumbling my way through like an idiot.

Thanks, Eric

Yes Burt,
it takes a real work of art like you to re post a message that among
other things deprecates the actions of the American bombing missions
in WWII, a lot of those early bombing runs in Europe were actual
suicide missions, but I suspect you would defile your own mother if it
gave you the attention/notoriety that you appear to *SO* desperately
crave.

3498. Super Battery product announcement

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-13 00:00:00 UTC
From: as-w20@ix.netcom.com
Message-ID: <5duig2$9fh@sjx-ixn4.ix.netcom.com>
Source record: 204803
Cross-posted to: rec.radio.cb,rec.radio.amateur.misc,rec.radio.scanner,rec.radio.swap

New product announcement... Dura-Pack portable rechargable power supply for all handheld radios, scanners, CB, etc!

Dura-Pack is the intelligent solution to your portable electronics power problems! Run your handheld radio up to five times longer than a standard 500 mAh NiCad! Say goodbye to NiCad "memory" problems forever. Say goodbye to spending $5.00 to $20.00 on alkaline cells each time you "recharge".

Dura-Pack will power any handheld electronic devices that have or have available a car adaptor plug. Dura-Pack recharges right in your car in about an hour or so, and requires NO separate charger. Forget about six hour or overnight charging. It supplies 12 volts and 2.5 ampere hours through two standard automotive cigarette lighter sockets. It weighs less than three pounds, measures only 8 x 2.75 x 1.75 inches. Comes with nylon case and belt loop. Includes car charge cord that stows in the case.

Dura-Pack is made with aerospace quality, mil-spec sealed cells that will not offgas, leak, or require any maintenance. It is NOT a cheapie NiCad, Gel-Cell, or lantern type battery. It does NOT develop a memory, it does NOT need a special delicate charge cycle, it does NOT need "cycling" or discharging to maintain its performance. Charge all at once, or in little bits. Lasts over 2000 cycles, not the 200 real world lifespan of NiCads and Gel-Cells.

This is the ultimate power source for emergency kits, mobile communications, field use, or backup power you can count on. Made in the USA. Retail is $129.95 including shipping in the lower 48.

Please feel free to Email or call for more information before you buy! For your security and peace of mind, either checks COD orders are available.

BFD. A plain old lead-acid gel cell, available all sorts of places at
a fraction of that price.

Oh, and by the way, dude, there is no "memory effect" in nicad
batteries, so including that in your advertisement is misleading.

I think the FCC will likely grant them the right to charge whatever they want. "Deregulation" is the way we are going; I was somewhat surprized they had to apply to FCC at all for the increase. But there is a positive side to this. With deregulation, long distance carriers such as ATT now have the right to offer local phone service as well. So, if Bellsouth (in my case) adds a surcharge, I can just imagine ATT, who already offers me a free 5 hrs per month internet service, and who deregulation is now allowing to offer local service again, for the fist time in several years, also offering local phone service with no internet surcharge, just to get my long distance business. I will then drop Bellsouth like a hot potato. Bellsouth is only left with customers who do not care about logging on to the internet; ATT gets the customers who do log onto the internet, and who may tend to use long distance more often for business, etc.. You get the idea. The free market may squash this one out. I think FCC probably has little choice but to grant them this if they really want it. If local carriers really want to lose good customers, charging per minute internet fees will be the way to do that.

I have finally got the chance to update a few things on my pages. Just been
to busy with other things and I havn't posted a update for awhile now.
Would like to get some hits on my pages and feel free to comment via email
or sign my guestbook.
Have you ever wanted to view more than just one DX Web-Cluster ??
Check out the page I made to view three of them, just click on "Mega-Web"
to see plenty of DX from the worldwide clusters.
Plus the Club pages have been updated The Central Virginia Contest Club and
if you into kayaking or canoeing check out the Blue Ridge River Runners page.
I also have a kayaking page but hasn't been updated for awhile and will be in
the works soon on a new page.
Stop on by and have a visit and THANKS for everyone who has stopped by for a
view.

Message-ID: <19970213140900.JAA17282@ladder01.news.aol.com>
Source record: 204815

I agree....this group is alot of fun!

It sure beats the "packet-crap" I've experienced. The "God-like"
sysops of the packet world want to censor every damn word
that comes across! They even have those silly little programs
that are meant to find those "offensive words". Problem is....
those programs "kick in" on peoples last names like "HanCOCK"
or certain words like harrASS.

Then you have the politically correct sysops who love Clinton so
much, they won't allow anything but "praise for the Prez" come
through their TNC's!

Some of these sysops even make it a full time job to look for
ANYTHING that may resemble being "vulgar". I once posted a
message and used the word "damned" in a literal sense....describing
a "damned" soul. The asshole sysop wrote back saying he killed
my message for "cussing"! What a dork!!!

This newsgroup....and the Internet....beat amateur radio by a mile!
And now I can use my webphone to have "qso's" with other hams,
interference and jamming free! Life IS good!

Fred

3511. What does "self policing" mean???

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-13 00:00:00 UTC

I've heard this ridiculous phrase "self policing" so many times,
I want to gag!

You CANNOT police without enforcement. You CANNOT enforce
without punishment! The "self" in "self policing" can do neither!

So does this mean we are allowed to take part in vigilantism
to accomplish our "self policing" policy????????

If you think it would be useful, you certainly should do that. After all, we keep hearing from you that VHF amateur operations have gone to hell in your state, so some documentation would be useful. We aren't hearing the sort of things Drew has been reporting to be occurring on 75m on the 2m band down here. So feel free to give us a sample of the horrors you're experiencing up there and let us judge if your VHF mess is worse than the plainly evident HF mess. Put some WAV files up so we can listen for ourselves, as Drew has done.

The funny thing is, his radio can't be modified. Never could.
The one good thing about the 212 is the narrow filtering. So
he never got the answer he wanted because that wasn't the answer!

[rest deleted]

Gary,

You make a lot of good points and clearly understand communications and information theory; I think I should clarify/elaborate on my thoughts.

Yes, there are two OOK format signaling states in CW (the signaling "alphabet" - 0,1); symbols are generated by combinations of these states over time. I'm thinking of the dots, dashes, letter-spaces and word-spaces symbols as variable length codewords. The empty/off portion separating dots from dashes is a suffix of the symbol. If you think of it in Digital terms, a dot is (111111100000), a dash is (11111111111100000), a letter-space is (00000000000) and a word-space is "longer than a letter-space".

You may have noise in the sampling instances, but the ADC usually samples much more frequently than the human hand sends the code. Dashes have more 1's than dots and about the same number of trailing 0's; letter-spaces have more 0's than dots and dashes and word-spaces have more 0's than all the others. It's just a little adaptive filtering; there are known average dot, dash, letter-space and word-space that can be used as starting points.

The QAM-like constellation I was referring to is what you'd get after sending this VLC through your sample-and-hold/periodic-integrator. You would need to bias the decision threshold so that dashes appear above dots

above the "zero", with the letter-spaces above the word-space, both below the "zero".

It's all software and very sharp band-pass filtering. ;-)

Yes, signaling systems like QPSK are significantly more efficient, IF you have the equipment to encode and decode the signals in the first place. The beauty lies in the fact that you don't NEED a computer to encode or decode CW; it's the most "flexible" human-computer, computer-computer, human-human information transmission mode I know of. Voice wastes bandwidth, voice-recognition on a computer is MUCH more computationally intensive and computer voices leave a great deal to be desired. I propose we convert all voice bands to digital and keep the CW portions since obviously they are far more efficient. (Just kidding. hi hi :-)

It's all a matter of perspective. Most people I know can't listen to an ASCII bit stream, even at slow speed, and determine what the computer is transmitting. ;-)

Andrew.

Source record: 204623

I'd like to get a ham radio license so when my husband and I sail around the world, we'll have access to weather faxes, email, and other people to talk to (those long passages can be lonely!). I've found information on "how to become a ham" but I'm not sure which type of license to get. I'd rather not have to learn morse code if I don't have to. We already have so much to learn that I'm trying not to drive myself crazy with more to absorb in the next year or so. Also, we don't have a radio yet-(we don't even have our boat, but we're looking) so if you have any suggestions for reasonably priced equipment that will tolerate a marine environment, I'd like to hear about that, too. I'd appreciate it if someone would email me directly (jimpatti@cnw.com) with the answers since my news server doesn't pick up all postings.

Thanks alot,

Patti

Propagation Forecast Bulletin 7 ARLP007
From Tad Cook, KT7H
Seattle, WA February 14, 1997
To all radio amateurs

SB PROP ARL ARLP007
ARLP007 Propagation de KT7H

Solar activity continues to stay very low. Solar flux slowly drifted down over the past week, with average values almost three points lower than the previous week, and average sunspot numbers down about 15 points.

Geomagnetic disturbances were not down, however, and the planetary A index was above 20 over three days, indicating a geomagnetic storm.

Look for quiet conditions over the coming contest weekend, with no expected geomagnetic disturbances and solar flux remaining in the low seventies. Solar flux is expected to remain in the low seventies over the next few weeks. February 22 through 24 could see a recurrence of geomagnetic activity, and again to a lesser extent around March 5 through 7.

Sunspot Numbers for February 6 through 12 were 35, 38, 11, 11, 0, 0 and 0 with a mean of 13.6. 10.7 cm flux was 74.2, 75.7, 75.2, 73.2, 72.3, 71.1 and 70.9, with a mean of 73.2. Estimated planetary A indices for the same period were 9, 3, 21, 16, 21, 20, and 7, with a mean of 13.9.

Here are some contest weekend path projections from the center of the United States.

To Europe, check 80 meters from 2330z to 0730z, 40 from 2230z to 0230z and 0730z to 0930z, and 20 from 1530z to 1830z.

To Africa, check 80 meters from 0000z to 0330z, 40 from 2330z to 0300z and 20 from 1830z to 2130z. There is a chance for a 15 meter opening around 1900z.

To South America, check 80 meters from 0000z to 1000z, 40 from 2330z to 1100z, and 20 from 1500z to 0000z, with the best 20 meter

conditions toward the end of the period. Check 15 meters from 1700z to 2030z, and 10 meters has a chance for some propagation around 1900z to 2100z.

To the South Pacific check 80 meters from 1000z to 1330z, 40 from 0930z to 1400z, 20 around 1530z and 15 around 2200z to 2300z.

To East Asia check 80 from 0830z to 1400z, 40 from 0830z to 1500z and 20 from 2130z to 0000z.

Don't confuse the excellent front end filtering of the HTX202
with the mediocre filtering of the HTX212. The latter *will* receive
out of band, and suffers the intermod which commonly accompanies
such a "feature" (I'm tempted to say "such a defect"). It will
also transmit out of band (MARS/CAP enabled), but not very far
out of band. The firmware won't let it operate on Marine channels
(where it would be illegal to use anyway since it isn't Type
Accepted for that service).

I'd like to add that it is important for amateurs to fight against
this sort of misuse of amateur equipment by people operating in
other services. We should all recall the uncomfortable restrictions
placed on amateur amplifiers due to misuse by members of the CB service.
We are likely to see similarly uncomfortable restrictions placed on
amateur VHF/UHF equipment if it continues to be misused by operators
in other services such as the public safety, land mobile, or marine
services.

David,
Check with your friendly power company or telephone company. They
have post hole diggers (hand type) that are long enough to handle
your job. Good luck.

PRESIDENT CLINTON RECOGNIZES AMATEUR RADIO

President Bill Clinton sent greetings to
Amateur Radio during the week leading up
to the October 12-13 Simulated Emergency
Test. The President's greeting refers to the
week as "Amateur Radio Week." The
White House faxed a copy of the
president's message to ARRL member
Darlana Mayo, KB2EPU, of Mt Vernon,
New York, who worked with the White
House for several months to get the
acknowledgment. Mayo said she wanted
the president to "be aware of our value to
the community particularly in emergen-
cies." Mayo, a ham for 10 years is a
member of ARES and RACES, and serves
as an assistant director and an assistant
emergency coordinator in the Hudson
Division.

Here's the text of the White HoUse state-
ment, which was signed by President

October 7 through 13, 1996, as
Amateur Radio Week.

- In the past century, the medium of
radio has changed the way we live and

The way we view our world, and Ama-
teur Radio operators have played a vital
role in this communications phenom-
enon. Sharing knowledge and techno-
logical expertise, connecting comput-
ers via radio equipment, and linking
people all across the globe, ham radio
operators have helped to make our
world a true global;village. But even
more important, they have provided a
crucial lifeline of relief in times of di-
saster and hardship, ensuring that hope
and help are on the way to those in need.

Amateur Radio Week offers us a welcome opportunity to thank our nation's amateur radio operators for their commitment to excellence and their willingness to work for the well-being of others.

Best wishes for a wonderful week.

Bill Clinton President USA

3526. ARLB008 Comments needed, Little LEO

SB QST ARL ARLB008
ARLB008 Comments needed, Little LEO

Commercial satellite interests seeking access to bands below 1 GHz--including amateur allocations at 146 and 430 MHz--now have added 220 MHz to their ''wish list.'' For the first time, Little LEO (low-earth-orbiting satellite) interests have proposed including 219-225 MHz in their list of desired allocations for the non-voice, non-geostationary (NVNG) mobile-satellite service (MSS). The move was contained in the industry's so-called ''flexible allocation proposal,'' delivered at the February 13, 1997, meeting of FCC Informal Working Group (IWG) 2A. Little LEO targets now include 146 to 148, 219 to 225 and 430 to 450 MHz. The ARRL and AMSAT were among those objecting to the concept, and the League is urging those who agree with their position to comment to the FCC by March 4. IWG-2A has been preparing draft proposals for the 1997 World Radiocommunication Conference (WRC-97). These will be reviewed during a March 5 meeting of the FCC's WRC-97 Industry Advisory Committee that is preparing draft proposals for consideration by the United States as it gets ready for WRC-97

The ARRL and AMSAT statement said the latest proposal affecting amateur allocations in the 219 to 225 MHz segment came ''at the last possible moment'' and ''without any technical support whatsoever.'' The League and AMSAT pointed out that the little LEO proponents have had more than a year to complete a technical study of the possibilities of sharing with the amateur services in the 144 to 148 MHz and 420 to 450 MHz bands. ''They have not demonstrated compatibility for sharing these amateur bands but over the evolution of their document have proposed various 'new ideas' for use of these bands.''

The little LEO flexible allocation strategy for WRC-97--submitted as IWG-2A/86 (Rev. 6)--is to propose broad allocations. The apparent theory is that most administrations would find reasons to oppose little LEO use of specific bands in the crowded spectrum below 1 GHz,

but that a broad allocation would permit different implementations in different countries depending on local circumstances.

At the February 13 meeting, a coalition of spectrum interests--including land mobile, amateur, broadcasting, and military--opposed the flexible allocation concept on three grounds: that the concept is simply an invention to avoid performing technical sharing studies that would demonstrate the unfeasibility of sharing; that it is inconsistent with decades of ITU allocations practices; and that, if adopted, the concept would be counter to US interests. The coalition document is identified as IWG-2A/107.

The ARRL and AMSAT submitted a further statement of opposition, citing the absence of any technical studies that might support sharing with the amateur service or the amateur-satellite service and pointing out that the little LEOs have completely mischaracterized the nature of ITU Resolution 640 regarding the use of certain amateur bands in the event of natural disasters. The ARRL/AMSAT paper, revised to reflect opposition to the late proposal to include 219-225 MHz, is identified as IWG-2A/108 (Rev. 1).

Amateurs also might find interesting the comments of the Department of Defense, identified as IWG-2A/101 (Rev. 1). These address the 430 to 450 MHz segment the Little LEOs seek to share.

Anyone wishing to register support for the ARRL/AMSAT submission should send a brief e-mail message to wrc97fcc.gov. The Subject line should say ''Reference No. ISP-96-005 IWG-2A.'' A simple statement to this effect, ''I support the ARRL/AMSAT opposition to the NVNG MSS flexible allocation proposal,'' will be included in the public record and will help to drive home the point that there is broad-based opposition to poorly conceived sharing proposals.

Please note. The proposals the League opposes are not FCC proposals, nor are they endorsed by any other branch of the government. They are industry proposals. The League's objective is to demonstrate there is broad citizen opposition to the industry proposals, so the government will not adopt them as US proposals. So, please don't ''flame'' the FCC if you comment.

Additional arguments or evidence also is welcome. Important. Comments should reach the FCC no later than March 4, 1997.

The complete ARRL/AMSAT opposition statement and other comments will be posted by February 15 on the ARRLWeb page, http://www.arrl.org/ under Band Threat News.

To all radio amateurs

SB QST ARL ARLB009
ARLB009 FCC resumes vanity processing.

The vanity floodgates have reopened. The FCC office in Gettysburg, Pennsylvania, has processed vanity applications received from December 1, 1996, through the present. In all, slightly more than 2400 applications were processed, but only slightly more than half of the applicants managed to successfully snag one of their call sign choices. The FCC made 1344 grants. More than 1000 applications ended up in the dreaded work in process (WIPS) stack for special handling. It*s expected that most of the WIPS applications will be dismissed because the FCC was unable to grant any of the applicant*s requested call sign choices. In other cases, the FCC must resolve apparent discrepancies in the applicant*s name, address or call sign.

A backlog of WIPS applications had held up vanity processing for approximately two months, as personnel in Gettysburg worked to clear the decks. Prior to the recent big wave on February 12, a few vanity grants had trickled out of Gettysburg as the staff worked its way through the WIPS pile.

Vanity call sign applications continue to arrive at the FCC. Gate 1 opened last May, Gate 1A opened in July and Gate 2 opened in September. There is still no word on when the FCC plans to open Gate 3.

---

* Address changes: Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
* Editorial: Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

IN THIS EDITION:

* Speak up! Little LEOs target 219-225 MHz!
* Vanity processing resumes
* WRTC 2000 to be held in Slovenia
* FCC: post-sale cellular scanner mods are illegal
* FCC fines retailer for illegal scanner marketing
* Ham Radio & More could leave the air
* A 73 kHz "first" in the UK
* Solar activity still down
* MUF database available via the Internet
* Kenwood debuts ham radio self-study kit
* FCC issued call sign update
* IN BRIEF: Hams help fire victims; Ham-doctor helps Brazilian child; Club marks 45 years; Ham to appear on Prime Time Live; Logos wanted; Mir QSL info; N3JT back in practice; SSB adds Mutek and Parabolic AB lines

---

COMMENTS NEEDED BY MARCH 4! ARRL OPPOSES LITTLE LEO EFFORT TO INCLUDE 219 TO 225 MHZ

Commercial satellite interests seeking access to bands below 1 GHz--including amateur allocations at 146 and 430 MHz--now have added 220 MHz to their "wish list." For the first time, Little LEO (low-earth orbiting satellite) interests have proposed including 219-225 MHz in their list of desired allocations for the non-voice, non-geostationary (NVNG) mobile-satellite service (MSS). The move was contained in the industry's so-called "flexible allocation proposal," delivered at the February 13, 1997, meeting of FCC Informal Working Group (IWG) 2A. Little LEO targets now include 146 to 148, 219 to 225 and 430 to 450 MHz. The ARRL and AMSAT were among those objecting to the concept, and the League is urging those who agree with their position to comment to the FCC by March 4. IWG-2A has been preparing draft proposals for the 1997 World Radiocommunication Conference

(WRC-97). These will be reviewed during a March 5 meeting of the FCC's WRC-97 Industry Advisory Committee that is preparing draft proposals for consideration by the United States as it gets ready for WRC-97

The ARRL and AMSAT statement said the latest proposal affecting amateur allocations in the 219 to 225 MHz segment came "at the last possible moment" and "without any technical support whatsoever." The League and AMSAT pointed out that the little LEO proponents have had more than a year to complete a technical study of the possibilities of sharing with the amateur services in the 144 to 148 MHz and 420 to 450 MHz bands. "They have not demonstrated compatibility for sharing these amateur bands but over the evolution of their document have proposed various 'new ideas' for use of these bands."

The little LEO flexible allocation strategy for WRC-97--submitted as IWG-2A/86 (Rev. 6)--is to propose broad allocations. The apparent theory is that most administrations would find reasons to oppose little LEO use of specific bands in the crowded spectrum below 1 GHz, but that a broad allocation would permit different implementations in different countries depending on local circumstances.

At the February 13 meeting, a coalition of spectrum interests--including land mobile, amateur, broadcasting, and military--opposed the flexible allocation concept on three grounds: that the concept is simply an invention to avoid performing technical sharing studies that would demonstrate the unfeasibility of sharing; that it is inconsistent with decades of ITU allocations practices; and that, if adopted, the concept would be counter to US interests. The coalition document is identified as IWG-2A/107.

The ARRL and AMSAT submitted a further statement of opposition, citing the absence of any technical studies that might support sharing with the amateur service or the amateur-satellite service and pointing out that the little LEOs have completely mischaracterized the nature of ITU Resolution 640 regarding the use of certain amateur bands in the event of natural disasters. The ARRL/AMSAT paper, revised to reflect opposition to the late proposal to include 219-225 MHz, is identified as IWG-2A/108 (Rev. 1).

Amateurs also might find interesting the comments of the Department of Defense, identified as IWG-2A/101 (Rev. 1). These address the 430 to 450 MHz segment the Little LEOs seek to share.

Anyone wishing to register support for the ARRL/AMSAT submission should send a brief e-mail message to wrc97@fcc.gov. The Subject line should say "Reference No. ISP-96-005 IWG-2A." A simple statement to this effect, "I support the ARRL/AMSAT opposition to the NVNG MSS flexible allocation proposal," will be included in the public record and will help to drive home the point that there is broad-based opposition to poorly conceived sharing proposals.

Please note! The proposals the League opposes are not FCC proposals, nor are they endorsed by any other branch of the government. They are industry proposals. The League's objective is to demonstrate there is broad citizen opposition to the industry proposals, so the government will not adopt them

as US proposals. So, please don't "flame" the FCC if you comment.

Additional arguments or evidence also is welcome. Important! Comments should reach the FCC no later than March 4, 1997!

The complete ARRL/AMSAT opposition statement and other comments will be posted by February 15 on the ARRLWeb page, http://www.arrl.org/ under Band Threat News.

FCC RESUMES VANITY PROCESSING!

The vanity floodgates have reopened. The FCC office in Gettysburg, Pennsylvania, has processed vanity applications received from December 1, 1996, through February 5, 1997. In all, slightly more than 2400 applications were processed, but only slightly more than half of the applicants managed to successfully snag one of their call sign choices. The FCC made 1344 grants. More than 1000 applications ended up in the dreaded work in process (WIPS) stack for special handling. It's expected that most of the WIPS applications will be dismissed because the FCC was unable to grant any of the applicant's requested call sign choices. In other cases, the FCC must resolve apparent discrepancies in the applicant's name, address or call sign.

A backlog of WIPS applications had held up vanity processing for approximately two months, as personnel in Gettysburg worked to clear the decks. Prior to the recent big wave on February 12, a few vanity grants had trickled out of Gettysburg as the staff worked its way through the WIPS pile.

Vanity call sign applications continue to arrive at the FCC. Gate 1 opened last May, Gate 1A opened in July and Gate 2 opened in September. There is still no word on when the FCC plans to open Gate 3.

WRTC 2000 TO BE HELD IN SLOVENIA

Tine Brajnik, S50A, has announced that The Slovenia Contest Club--which sent a large group of contesters to WRTC 96 in the San Francisco Bay area--will be the host of WRTC 2000. Brajnik said the club's application to the World Radiosport Team Championship steering committee to host WRTC 2000 was approved this week.

Serving on the initial WRTC 2000 committee in Slovenia are S50A, S53R, S59AA and S59L. Brajnik said the committee is now defining the basic criteria to select competitors and is making other organizational preparations. "The world Amateur Radio community will be informed of all developments and information through Internet reflectors and the different ham-radio publications," he said.

For now, all official WRTC 2000 messages will come from--and inquiries should be sent to--S50A at WRTC-2000, Slovenia Contest Club, Saveljska 50, 1113 Ljubljana, Slovenia; e-mail tine.brajnik@guest.arnes.si.

FCC ON SCANNING RECEIVERS: POST-SALE CELLULAR MODS ARE ILLEGAL

In the wake of the Newt Gingrich cellular telephone taping incident, the FCC has made it clear that it's illegal for manufacturers or dealers to modify scanning receivers to enable reception on cellular telephone frequencies. A Public Notice, DA 97-334, issued February 13, declares that scanner modification is included in the ban on manufacturing cellular-ready scanners.

The notice comes as members of Congress raised concerns over the widely publicized incident where a cellular telephone conversation of House Speaker Newt Gingrich was intercepted and taped and its contents ended up on the pages of the New York Times. A House subcommittee hearing on cellular telephone privacy that also stemmed from the Gingrich cellular taping and disclosure also addressed the issue earlier this month.

Among those testifying before the Subcommittee on Telecommunications, Trade and Consumer Protection was Bob Grove of Grove Enterprises (and Monitoring Times), who tried to argue that a legal loophole allowed him to sell and then retrofit scanners to pick up cellular conversations. Other testimony focused on the low priority that Congress has placed on prosecution of cellular eavesdropping cases.--FCC/Steve Mansfield, N1MZA

FCC FINES RETAILER IN ILLEGAL SCANNERS CASE

The FCC has upheld a stiff fine against Ace Communications of Fishers, Indiana, for illegally selling scanners that were not FCC-certified and that could receive cellular telephone frequencies. The FCC's Compliance and Information Bureau issued the $20,000 Notice of Forfeiture February 5, 1997, for "willful and repeated violation of Section 302(b) of the Communications Act of 1934, as amended, and repeated violation of Section 302(b) of the Act and Section 2.803 of the Commission's rules. Specifically, the FCC cited the company for "advertising and selling two different scanners without first obtaining an equipment authorization." The FCC complaint involved the Yupiteru MVT-7100 and the Trident TR-2400 scanners. The Commission said it would not have issued an equipment authorization because the scanners in question "were capable of tuning into frequencies assigned to the cellular telephone service."

Ace had advertised one of the scanners in Amateur Radio publications in 1993, but none of the ads ever ran in QST. The FCC also rejected all arguments to reduce the fine or dismiss the Notice of Apparent Liability.--FCC

HAM RADIO & MORE COULD BE HISTORY AFTER MARCH 30

Ham Radio & More radio program host Len Winkler, KB7LPW, says the show's last broadcast could be Sunday, March 30, if ad revenues don't make a drastic turnabout. Winkler, who's been the hobby program's host since it first aired on April 21, 1991, says flagging financial support has prompted KFNN (1510 AM) in Phoenix--which produces the program--to cancel it. But Winkler is still holding out hope that the program can continue. "March 30 is still the deadline, but it is not in concrete yet!" he said this week. Ham Radio & More--the only weekly ham radio program on commercial radio--once was carried on more than 70 local stations. Today, the number of

commercial outlets carrying the show has dwindled to fewer than two dozen. "I have been promoting Amateur Radio as strongly as humanly possible to the general public since the beginning." The program also is "aired" live via RealAudio on the Internet, and both live and tape-delayed twice weekly on WWCR shortwave. "Our listenership has soared since we went live each week on shortwave," he said. "Not only do the licensed hams listen, but tons of shortwave listeners around the world!" ARRL Lab Supervisor Ed Hare, KA1CV, has been among the program's guests.

Generating advertiser dollars to support the program has been less successful, however. "It's very sad that the industry is complaining about lagging sales, yet they refuse to advertise to potential licensees," Winkler said. "If the show dies, it will be just another nail in the Amateur Radio coffin."

Winkler says he's not compensated for his role in the show and has spent $10,000 of his own money on it. Listener donations are welcome to keep the show on the air. Checks should be made out to KFNN Radio and sent to Ham Radio & More, 4800 N Central, Phoenix, AZ 85012. Winkler says that no checks will be cashed unless the show stays on the air past March 30. "Ham Radio & More is not finished yet."

Ham Radio & More show information is available on the Web at http://www.goodnet.com/~lenwink/hrm.htm. Ham Radio & More airs live Sundays at 6 PM Eastern (2300 UTC) and may be heard locally on commercial stations as well as on WWCR at 5.070 MHz and on RealAudio via the Internet at http://www.AudioNet.com/radio/business/kbnp. The program airs on a delayed basis via WWCR Mondays at 1000 UTC on 3.210 MHz.

A 73-KHZ BAND "FIRST" IN GREAT BRITAIN

Mike Dennison, G3XDV, and Peter Dodd, G3LDO, have made what they claim to be the first cross-band contact involving the UK's new 73 kHz band. Running 20 W input on 72.5 kHz and feeding a 200-foot loaded loop antenna, Dennison was able to reach Dodd, who was operating portable and using a short length of wire for a receiving antenna. Talk-back was on 432 MHz. The distance between the nearest parts of their antennas was approximately 575 feet, but this could be a record. The tests were in preparation for what is expected to be the first two-way contact on 73 kHz. (For more information, look for "73 kHz--A New Band for Great Britain" in March QST, p 40.)--RSGB

SOLAR ACTIVITY STAYS LOW

Solar seer Tad Cook, KT7H, in Seattle, Washington, reports: Solar activity continues to stay very low. Solar flux slowly drifted down over the past week, with average values almost 3 points lower than the previous week and average sunspot numbers down about 15 points. Geomagnetic disturbances were not down, however, and the planetary A index was above 20 for more than three days, indicating a geomagnetic storm.

Look for quiet conditions over this contest weekend, with no expected geomagnetic disturbances and solar flux remaining in the low 70s. Solar flux is expected to remain in the low 70s over the next few weeks. February 22-24

could see a recurrence of geomagnetic activity, and again to a lesser extent around March 5-7.

Sunspot numbers for February 6 through 12 were 35, 38, 11, 11, 0, 0 and 0, respectively, with a mean of 13.6. The 10.7-cm flux was 74.2, 75.7, 75.2, 73.2, 72.3, 71.1 and 70.9, respectively, with a mean of 73.2. Estimated planetary A indices for the same period were 9, 3, 21, 16, 21, 20, and 7, respectively, with a mean of 13.9.

Here are some ARRL International DX Contest CW weekend path projections from the center of the United States:

* To Europe, check 80 meters from 2330 to 0730 UTC, 40 from 2230 to 0230 UTC and 0730 to 0930 UTC, and 20 from 1530 to 1830 UTC.

* To Africa, check 80 meters from 0000 to 0330 UTC, 40 from 2330 to 0300 UTC and 20 from 1830 to 2130 UTC. There is a chance for a 15 meter opening around 1900 UTC.

* To South America, check 80 meters from 0000 to 1000 UTC, 40 from 2330 to 1100 UTC, and 20 from 1500 to 0000 UTC, with the best 20 meter conditions toward the end of the period. Check 15 meters from 1700 to 2030 UTC, and 10 meters has a chance for some propagation around 1900 to 2100 UTC.

* To the South Pacific check 80 meters from 1000 to 1330 UTC, 40 from 0930 to 1400 UTC, 20 around 1530 UTC and 15 around 2200 to 2300 UTC.

* To East Asia check 80 from 0830 to 1400 UTC, 40 from 0830 to 1500 UTC and 20 from 2130 to 0000 UTC.

NEW MUF PREDICTIONS DATABASE AVAILABLE

Maximum usable frequency (MUF) predictions covering the period of February and March 1997 now are available via the Internet from Solar Terrestrial Dispatch in Alberta, Canada. Details on how to order these predictions and the software to display the graphs can be found at http://solar.uleth.ca/solar/www/predict.html. The databases are $20 apiece. Viewing software is $30.

The predictions are based on anticipated levels of solar and geophysical activity and were computed using an ionospheric ray tracing engine to accurately determine MUFs, optimum signal takeoff angles, optimum frequencies, and other valuable information between 50 worldwide regions including the US, Canada, Europe, Asia, Africa, the UK, Australia, New Zealand, Hawaii, South America and many others. For more information, send e-mail to Cary Oler at COler@Solar.Stanford.Edu or Oler@Solar.Uleth.CA. Oler called the database is "the most comprehensive MUF predictions database available and is a valuable resource for anyone interested in high-frequency radio communication."--Cary Oler

KENWOOD AMATEUR RADIO SELF-STUDY PACKAGE NOW AVAILABLE

Kenwood's ham radio self-study program for the Technician class license, "Make a Personal Connection," now is available at Amateur Radio dealers. The

package includes EZ-PASS, a PC Windows-based training program, as well as a study manual that supports the software with information on operating rules and regulations and electronics theory. In addition, the kit contains the How to Get on the Air Guide--a ham radio primer--as well as Amateur Radio frequency charts. (The package also includes an ARRL membership application.)

"Make A Personal Connection" is available for Windows 95 and DOS. Minimum system requirements are a 386DX/33 and 8 MB of RAM. For more information, check out Kenwood's Web page at http://www.kenwood.net.

Puerto Rico KP3V KP3AP NP3JX WP4NMT

New prefixes are available for this block, but none have been issued.
++ All call signs in this group have been issued in this area.

IN BRIEF:

* Hams help fire victims: Monroe County, Michigan, ARES turned out February 7 to support the local Red Cross chapter in the wake of a major fire in a 54 unit apartment building affecting 49 families--some 18 months after turning out to help the Red Cross following a major fire in the same building. The building was destroyed in the later blaze. Hams provided communication to support mass care and feeding efforts, including feeding the scores of firefighters at the scene and providing food, temporary shelter, and basic needs to fire victims. Eight hams pitched in during the day-long operation.--Dale Williams, WA8EFK

* Ham-doctor helps Brazilian child: Dr Jeff Zlotnick, KB2EVB, of Easton, Pennsylvania, was able to provide some over-the-air aid via phone patch when

the call went out from PP8ZBL on the Maritime Net February 1, requesting help for a sick child in Brazil. Zlotnick asked for information on the child's condition, and made some recommendations for assistance, which PP8ZBL said they would follow. Bob Puharic, WF3H, of Whitehall, Pennsylvania, monitored the call and made the patch to KB2EVB. Both are members of the Delaware-Lehigh Valley Amateur Radio Club.--Clarence Snyder, W3PYF

* UK "Thinking Day"event: In the UK, some 90 special event stations will take to the airwaves this weekend, February 15-16, for the annual Guides and Brownies "Thinking Day on the Air," an event similar to the Scouting program's "Jamboree on the Air." The idea is to provide a chance to introduce Amateur Radio to groups of young people.--RSGB

* Club marks 45 years: The Phil-Mont Mobile Radio Club will operate W3AA--the Franklin Institute Station in the Philadelphia Science Museum--as a special event station on March 5 to celebrate the 45th anniversary of operation of the club station, formerly W3TKQ. Operation will be in the General portions of most bands. Other frequencies include 14.230 MHz SSTV, plus 3.990, 14.250, and 18.140 MHz. Certificates will be available for a self-addressed, stamped envelope. For more information on W3AA, visit the Web site at http://www.fi.edu/tfi/exhibits/w3aa.html. For more information on the club, set your browser to http://www.comcat.com/pmrc.--Stephen Hoch, WU3I

* Ham to appear on Prime Time Live: John Creel, WB3GXW, of Silver Spring, Maryland, will be interviewed by ABC's Chris Wallace on the February 19 edition of Prime Time Live. The program airs at 10 PM Eastern Time. Creel is an investigator with the Montgomery County, Maryland, Division of Consumer Affairs. The story to be aired concerns the problem of buying cars from unlicensed car dealers (so-called curbstoners) and odometer fraud. Creel has been a ham for 20 years and is a member of the Laurel (Maryland) Amateur Radio Club, where he's active in the VEC program. He also operates two repeaters in the Silver Spring area.--Mark Doore, N3NTQ

* Logos wanted: All Scouting units, ham radio clubs, emergency communication groups, equipment dealers and individual hams are being invited to send their logos for use on the ScoutRadio Web site, http://www.ocbsa.org/troop319/ham.htm. Logos may be sent as e-mail attachments to myriad1@ix.netcom.com for addition to the ScoutRadio opening home page. Specifications: 72 dpi, 100x100 pixels. If you're not sure how to do this, just attach your logo and the Scouts will do the rest! Logos already on display include those of the ARRL, QST, Kenwood, Buckmaster, Ham Radio Outlet, and CQ.

* Mir QSL info: Dave Larsen, N6CO, is the US Mir QSL manager for contacts made with Mir crew members. QSL cards must include the date, time, and mode of contact. N6CO does not handle cards for SWL reports. To confirm contacts with the Mir packet radio personal message system (PMS), include the message number issued by the PMS on your QSL. Send QSLs along with a business-sized, self-addressed, stamped envelope to David G. Larsen, N6CO, Box 1501, Pine Grove, CA 95665 USA. For more information, contact Larsen via e-mail at

doc@volcano.net. By the way, check out "Amateur Radio aboard Mir" on the ARRLWeb page, http://www.arrl.org/sarex/mir.html.

* N3JT back in practice: Former FCC staff member Jim Talens, N3JT, has joined the law firm of Steptoe & Johnson, specializing in telecommunications law. Talens recently retired from the FCC after a 22-year career. Most recently, he served as senior attorney in the Satellite and Radiocommunication Division.

* SSB adds Mutek and Parabolic AB lines: SSB Electronic USA of Mountaintop, Pennsylvania, now is a dealer for the Mutek Ltd and the Parabolic AB product lines. Mutek Ltd manufactures low noise preamps and VHF/UHF transverters, plus a series of front-end replacement boards for the FT736R, FT225, IC-211, IC-251, IC-271 and the TS700. Parabolic AB has recently introduced a new series of modular transverters that allow optional mast-mounting of the power amplifier and the preamplifier at the antenna. Transverters for 13 cm, 9 cm, 6 cm and 10 GHz, are planned for the near future. For more information, visit the SSB Electronic USA Web site, http://www.ssbusa.com, or send two first-class stamps for a product brochure to: SSB Electronic USA, 124 Cherrywood Dr, Mountaintop, PA 18707; tel 717-868-5643; fax 717-868-6917

I dunno about that. For every encryption method there is a software program to decrypt it. I see no reason why a court order when needed can't allow the necessary authorities the authority to listen in on a suspected criminal's conversations just the same way this is allowed on the twisted pair. You're thinking of the "clipper chip" debacle way back. This is slightly different, I think.

Todd

3532. Re: PRESIDENT CLINTON RECOGNIZES AMATEUR RADIO

Newsgroup: rec.radio.amateur.misc

(non USA groups cut)

Just wait a couple years, and President Clinton will be singing a different tune. There will be calls to ban all *nonstandard* recievers (including shortwave and scanner) and to eliminate amateur radio. The recievers will be dubbed *dangerous tools of subversion* and amateur radio will be called archaic, a waste of frequency spectrum, and possibly a tool for evil militia members to communicate with each other. All this in order to control ideas, stop people from listening to govt services and foreign radio broadcasts, and most of all to sell the spectrum to the highest bidder.

I'm sure Spew will be very proud to have a friend who writes such
things as:

(John Wilkerson) wrote:
>What the FUCK does this have to do with CB radio. There are enough
>problems on rec.radio.cb without you hams bringing *your* bullshit to our
>group.
> John L. Wilkerson Jr...
>Rec.radio.cb FAQ coordinator

And it must be a wonderful FAQ that you "coordinate", too. Does it contain
that kind of language?

>No... it seems the hobby he is licensed to is sick... he wants a cure for
>the sickness. Perhaps he does not wish to upgrade.... what lurks above in
>the higher classes is part of the problem.

The hobby/service is sick? Please do get your shortwave rcvr fixed. Aside
from less that a dozen frequencies (channels as you would call them),
there are hundreds of thousands other frequencies where the ladies and
gentlemen of amateur radio operate day-in and day-out without even a
thought of breaking any regulations. There are literally thousands of
QSOs daily - you'll hear folks playing chess, discussing electronics,
comparing what they see through their backyard telescopes that are trained
on a common celestial object, practicing their foreign language, providing
phone patches for ships and boats at sea - the list is endless.

>You want Drew to stop.... How about you all "self police" like you all
>*say* you do and stop the mess.

Given that there are about 700,000 hams in the US, let's suppose that
there are 70 "bad" hams on HF - that amounts to 1 in 10,000, or .01%;
if we're generous, even 700 rotten operators amounts to .1%!! So it
would appear that the remaining 99.9% of us are doing a fine job in
self-policing ourselves.

>Are you afraid his publicity is hurting your poor hobby :)

Absolutely not. But as a CB'er you should already know about
communications and propagation ("shooting skip" as you folks call

it). What Spew reports to us on .misc just duplicates what we can
hear for ourselves. Even here in Hawaii, with a Beverage antenna
I am able to listen to that 80m stuff.

>The stuffy attitude many of you all demonstrate is what has kept me from
>joining the hobby.

Walk over to .antenna and .homebrew and report on what "stuffy attitude"
you encounter from the helping hams on there (one can toss out the most
trivial question and a dozen or more friendly replies will fill one's
mailbox).

>Drew is probably the most sane of anyone in this group.

Hahahahahahahahahaha (falling out of my chair!)

>Drew is a proponent of legal radio operation.

Not so sure about that... But he has no qualms against suggesting the
pinning of coax (though I'm not 100% against that).

>He is very distressed at the state of radio communicatios today.

I don't detect any hint of distraught in his posts.

>It seems the so called "self-policing" hobby is denigrated to anarchy.
>yet, some of you dare to criticise the Citizen's Band....

99.9% of us are fine operators (using the 700 "bad op" figure). Too bad
you CB'ers can't make the same claim.

>Clean your house people!
>
>Do not harass those who publicize YOUR problems.... YOU made them. YOU
>accept responsibility! Do not blame Drew for making people aware you hams
>are not the angels you would like the world to believe.

99.1% vs 0.1%

>The truth hurts eh?

99.1% vs 0.1%

> John L. Wilkerson Jr.
>Rec.radio.cb FAQ coordinator

Well now that's something to be proud of! =:o

3535. Re: TS-440 display problem no rx, no readout

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-14 00:00:00 UTC
From: Dave Earnest <k7jj@ix.netcom.com>
Message-ID: <3304E0DA.2781E494@ix.netcom.com>
Source record: 204641

FWIW:

My 440 eventually did the same thing. I sent it to a guy in AZ, twice, paid shipping bothways, etc., and he never did get it fixed. Mine was always intermittent and went it went intermittent, the pll when flakey and the freq drifted down and down and down. That was about a $200 education. I then sent it to Kenwood in California. When they received it, a tech called and his first words were "don't tell me what any other tech has done!" He called me back 4 days later and told me he had replaced 1 coil, and some other components, run the radio through their environmental chamber and it was working fine again.

So I got my radio back and it works better than when I bought it (I think). I have used it strictly mobile ever since without a problem. That was 18 months ago.

I had heard horror stories about Kenwood service delays, etc. In my case, I have nothing but good things to say about the experience I had.

3536. Where to find 1940s callsign?

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-14 00:00:00 UTC
From: nv7v@burgoyne.com
Message-ID: <nv7v.77.0014EEC5@burgoyne.com>
Source record: 204642

A friend of mine is looking to get as a vanity callsign the call of his grandfather. The problem is the FCC has no record of who held these old calls. Is there somewhere these old callsigns can be looked up or do I just have to poke around until I find someone with a 1940s callbook?

He is looking for:

Lester A. Kennedy who lived in Michigan in the '40s.

Thanks,

nv7v@burgoyne.com

3537. What is a MCL SBL-1 -10??

I have an old Mini-Circuits mixer stamped MCL SBL-1 and right
below that is printed -10. I believe the device is a level 7
mixer but I'm thrown by the -10 that is printed on top.
Could this be a special mixer for a -10 dBm LO?? Any help
would be appreciated.

```
___________
| MCL SBL-1 | <-- Stamped in the metal can itself
| -10 | <-- Printed with ink

Let's see, I'm a ham, and an ordinary white generic American. A few weeks ago, I visit a Chinese friend, who at the time was trying to paint a room in his house. I decide to help, but don't want to risk getting paint on my clothes, so I strip to my undershorts. Have enough chest hair to resemble a monkey :-). Noticed my friend's disbelief that one could be that hairy, said "We white Americans do look pretty ugly, don't we!" He found me a beat up shirt and shorts to wear, which was good, it was a bit chilly. I was about 3 times faster painting the walls with the roller than he was.

So, guess this means I'm an ugly American ham :-)

Hmmmmm. PBS aired an excellent four-hour documentary last week about
the Gulf War. One camera shot was taken aboard an AWACS aeroplane
showing a radar image of the retreating Iraqi Republican Guard;
in the backround one of the radio receivers was spewing code at
about 25 wpm - the shot lasted about 6 seconds. I was so shocked
that I didn't copy any of it. |(

You shouldn't attempt to speak in an authoritative manner regarding areas

What do you mean you don't know of any radios tha can go from 2m to
the marine band??? Most of the new Kenwood HTs can, such as the
th-22, th078, and for that matter the alinco 2m ht's can just by
snipping a wire.

Look people. I asked for help! I would like to modify a ham rig for
use on the marine band for emergency use so I don't have to waste a

bunch of money on a MARINE rig I'll never use. I am sick and tired of all the unsolicited e-mails from cranky old men who have nothing better to do than to tell me this is illegal (which it is not).

If you cannot offer me the help I ask for but would rather treat me like an unintelligent fool than KEEP YOUR FUCKING MOUTHS SHUT.

Oh...I guess I'll get hate mail for that...

Whatever...I give up on getting help from ham operators...you are all a bunch of turn-of-the-century jack-asses who cannot handle progress and new technology.

From on generation X-er, I can't wait 'till you all die.

More info at http://www.fcc.gov/isp.html.
Get the real info instead of rumours:

Internet Access & Information Service Provider NOI

The NOI seeks comment on whether the FCC should, in addition to access charge reform, consider actions relating to the implications of information service and Internet access provider usage of the public switched network. In particular, in light of concerns raised over congestion on the public switched network, the Commission seeks comment on how it can most effectively create incentives for the deployment of services and facilities to allow more efficient transport of data traffic to and from end users. The Commission made no specific proposals, but tentatively concluded that providers of information services (including Internet service providers) should NOT be subject to the interstate access charges that local telephone companies currently assess on long-distance carriers.

Why don't you print or save this info in case you need it in the future?

Hello Friends,
It's time to take full advantage of the online medium by having your photographs scanned today! Once your pictures are scanned into one of three formats (GIF, JPEG, or BMP) you can do many exciting things with them.

-You'll easily be able to attach them to emails and send them to people your chatting with online. No more having to try and explain what you look like!

-You can also use your photos in all kinds of fun projects: build web pages; design your own greeting cards; make personalized stationary,desktops, and screen savers- the list is endless!

- Scan pictures of yourself, your pet, your vacation, or whatever you choose!

Cyber Services will scan ANY photograph, drawing, magazine clipping, or other artwork to an image file, and email or US mail it (on disk) back to you within 24 hours of its receipt. (You must be able to receive file attachments to get your file(s) via email. Check with your ISP if your not sure.) PRIVACY & CONFIDENTIALITY ARE ASSURED. You'll also receive helpful technical tips on everything from renaming your file to saving time when sending it to people via email.

We scan all our images in 16.7 million colors for best quality. For just $1 extra we can enlarge or crop your photo, blur out a body part, or ad text (such as your name or email address).

Best of all, as a FREE GIFT to you (limited time only), IF YOU CHOOSE TO, we'll reserve you a FREE PAGE (or pages) in our "Internet Date-Site" (Now under construction!!!). This web site contains pages classified by local area and sexual preference. There's also a erotic image gallery (must be legal age to enter), and a "special interests" section. That's right, you can have your own page on the internet for just $4! (Note: You're responsible for answering your dog's email!) Your free page(s) will include any or all of the following: Your scanned photo(s) (You pick which ones- You can have some, none or all of your photos posted on your page), your email address with an icon visitors can click to send you mail, and a brief profile about you. We'll remove or modify your page, at your request, at anytime! When the "Date-Site" opens for business, you'll receive an email notifying you of the address of your personal web page. You can give the address to people and they can view it from any internet
connection! There are millions and millions of people on the internet.It's

time you start meeting them! (This service won't be free for long so act now!)

If you have any questions regarding our services, please call us at (541)744-5718.

Ordering Information:

Price: $4 for first scan, $3 for each additional scan
Extras: $1 each to add personalized information. (name/email)
$1 each to have image modified (enlarged, body part blurred, etc..)
$2 to have image files mailed to you on a floppy disk (IBM or MAC).
$1 credit card processing fee (Visa/Mastercard users only)

If you would like your photographs returned to you please include a self addressed stamped envelope. Otherwise they will be destroyed.

Order Form (PRINT OUT or COPY CLEARLY):

Name (optional):

Email Address or Screen name (PRINT CLEARLY! You must be able to receive file attachments. Otherwise include $2 for shipment on floppy disk.):

Address (optional unless having shipped on disk):

Phone number (optional):

File type (GIF, JPEG, or BMP. GIF recommended):

Extras (Exact personalized info you want printed on scan):

Disk Format (if having mailed on a floppy): IBM or MAC

Payment method (Cash, Check, Money Order, or Visa/Mastercard):
Please make checks payable to Cyber Services.

Credit Card # (credit card orders only):

Expiration date:
Don't forget to include the $1 processing fee if your paying with your credit card.

Do you want the FREE GIFT? Yes or No (circle one)
-Web Page(s) in our "Internet Date-Site" (under construction). You can have a page for yourself, a page for your car, and a page for your cat! Be sure to indicate where you want your page (F4M, M4F, F4F, F4M, or Couples) and which of the following info you want on your page (print clearly): State and Town, email address, year or birth, physical description, quote/message (under 30 words please). Please indicate which photos you want on your page (if any) if you don't want them all to be displayed. If your want your nude/erotic photos displayed in our erotic image gallery YOU MUST include a signed statement that your are over 18 years of age or older and give us

consent to display your nude/erotic photo, and be sure to tell us if your want it displayed with your info or anonymously.

Mail the above information and photos with payment to:

Cyber Services
2852 Willamette St. #131
Department 1
Eugene, OR 97405

Orders sent overnight will be given first priority.

Erotic/Nude photo's will be accepted providing everyone in them is of legal age.

Questions? Call (541)744-5718

Please help our small business grow by sharing this info with someone you think could use it.

Thank You!

(GnhEpK)

Maybe he should do the world a favor and consider suicide, since he is so
distressed.

>I, myself, wish my shortwave receiver was operating so that I could also
>listen in to the zoo the ham bands have degraded to.

The ham bands haven't degraded into anything. What your little buddy
Spew is writing about has been going on for YEARS on a particular
few frequencies on 75 meters. It's nothing new, nothing exciting, nothing
to worry about. It's called 'Radio Fun'. The people who participate in
it seem to enjoy it very much, I imagine that's why they have been doing
it for so many years.

>Do not harass those who publicize YOUR problems.... YOU made them. YOU
>accept responsibility! Do not blame Drew for making people aware you hams
>are not the angels you would like the world to believe.

Your friend Spew, since he decided long ago that he doesn't 'fit in' with the
group (ham radio), does nothing productive at all in the ham newsgroups.
(See his posting elsewhere about 'turning off' his ham gear and 'turning on'
his CB.)

He is here only to cause as much hate and discontent as possible.
We were all very much aware of things that happen on the ham bands long
before your friend Spew could spell ham radio. All hams aren't angels, you
are very correct. A few hams are assholes. Like, for example, your friend,
Spew.

>I think I'll take my receiver to Universal here soon and get it fixed...

Good for you. If you hear me on HF, send me an SWL card. Nothing starts
the BBQ better than a pile of SWL cards.

Lessee... According to this logic, I should listen to the local 2-meter
"good buddy" box (the 146.70 repeater in Cranston, RI) and chronicle a
dozen or so morons in order to demonstrate what a total, abject failure
the codeless license has been in its implementation, right? I mean,
after all, that's exactly what you claim Spew is doing, except, of course,
his political agenda happens to coincide with yours.

FOR IMMEDIATE RELEASE

February 14, 1997

CONTACT: Nick Altenbernd, KA1MQX (altenb@mitvma.mit.edu)
Don Bledsoe, WB6LYI (dbledsoe@net-quest.com)
Jim Kelly, KK3K (skeptic@netaxs.com)

LAMBDA ARC PRESIDENT KA1MQX IN R.A.I.N. INTERVIEW

==========

The February 14-20 weekly edition of the R.A.I.N.(Radio Amateur Information Network) Report, by Hap Holly, KC9RP, features an interview with LARC (Lambda Amateur Radio Club) President Nick Altenbernd, KA1MQX. The R.A.I.N. Report is updated every Friday and, in addition to being available as an audio file on the R.A.I.N. website, it is broadcast over many repeaters throughout the country.

You can hear the R.A.I.N. Report using your sound-card-equipped computer, web browser, and a free plugin from Voxware, just point your Web browser at he following URL for complete instructions:

http://www.rrsta.com/rain/index.html

The Lambda Amateur Radio Club (LARC)

The Lambda Amateur Radio Club (LARC) is a club for gay, lesbian, bisexual, and transgendered radio, electronics and computer enthusiasts and their friends. LARC welcomes new members. There are no special requirements for membership other than an interest in radio, electronics or computers and a supportive attitude toward members of the sexual minority community. LARC publishes a monthly newsletter, sponsors local get-togethers at computerfests and hamfests, and organizes DXpeditions.

LARC is a public-service-oriented club which proudly affirms the sexual minority status of the majority of its members. LARC works publicly and visably for the benefit of all amateurs by promoting fairness, acceptance, and good will in ham radio especially on behalf of members of the sexual minority community.

FOR LARC MEMBERSHIP INFORMATION, visit our web sites:

http://www.netaxs.com/people/skeptic/larc/
http://www.geocites.com/WestHollywood/1686
http://www.net-quest.com/larc/

or request our electronic brochure by sending an E-Mail to:

LARC-INFO@seta.fi

Do not include any text in the message as the mail list software has not yet learned to read.

LARC also sponsors a moderated public electronic listserv: larc@seta.fi

3566. Icom-2000 & Intermod

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-14 00:00:00 UTC
From: dpaquett@ime.net
Message-ID: <3304551d.1151652@news.ime.net>
Source record: 204696

Hello,
I have an Icom 2000 that seems to picks up every bit of intermod that goes across the airwaves. Could this be a design flaw in the early modles? Is there any fix for it? The nearest commercial sight to me is approx 1 Mile as the crow fly's.

Does anyone have any helpful tips?
Thanks in advance
Dave (KA1JWM)

Hello Paul -- perhaps take a look at "Information on licensing abroad
for radio amateurs by OH2MCN " at URL:

http://www.clinet.fi/~jukka/license.html

Also you can visit the DX Reference Page below. Go to "International
Amateur Radio Leagues and Associations " at URL:

http://pw2.netcom.com/~ac6v/page7.html#Leagues

There are 2 links to Swiss Amateur Radio Pages there.

3572. Re: Proposed Internet Surcharges!

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-14 00:00:00 UTC
From: clint.bradford@atdbbs.com
Message-ID: <970214074100109 56@atdbbs.com>
Source record: 204702

The following is the LATEST, BEST-AVAILABLE INFORMATION on this topic...derived from Association of Online Professionals' Chairman Dave McClure and I discussing the issue DIRECTLY with the appropriate FCC representatives on February 12/13, 1997:

==========
Comments to FCC on ISP Access Fees
==========

Over the past week, message traffic across the Internet has incorrectly characterized the procedures, deadlines and general tone of an FCC request for comments on access fee reform as it might apply to Internet Service Providers.

This is an important issue for the online community, and AOP encourages ISPs and other interested parties to file comments. The following information is intended to assist you in doing so.

On December 23, the FCC initiated a proceeding to reform the present system of interstate access charges levied on long-distance carriers to make that system more competitive and to address questions of whether these fees reflect the actual cost to the local telephone companies. This proceeding, in a Notice of Proposed Rulemaking (NPRM) is identified as CC Docket No. 96-262. Formal comments were invited, with a deadline of January 27 and a deadline for reply comments of February 13.

This is **not** where ISPs should focus their responses, unless they have valid input to these specific telephone company issues. However, many of the comments filed on this issue do touch on ISP access fees, and you are encouraged to read the comments that have been posted online at http://www.fcc.gov/Bureaus/Common_Carrier/Comments/access_reform/.

Also on December 23, the FCC released a Notice of Inquiry (NOI) identified ad CC Docket No. 96-263. In the NPRM (see above), the FCC tentatively concluded that information service providers should not be subject to the interstate access charges as currently charged. However, the Commission also noted that the development of the Internet may raise issues beyond the scope of the access fee reform proposed in the NPRM. The NOI is designed to help the FCC decide whether access fees may be needed to create incentives for the deployment of more efficient data services.

AOP encourages all of its members to file appropriate comments with the FCC on this issue. In doing so, please be aware of the following:

1) You may file formal comments in writing, as AOP will do.
2) You may file informal comments by electronic mail by sending them to isp@fcc.gov. However, please note that "informal comments" does not mean "casual." It means "less formal than written comments," but there are still requirements for the format (e.g., putting the docket number in the subject line, providing a mailing address, etc.). Before filing comments, please review the information at http://www.fcc.gov/isp.html.
3) Deadline for these comments is March 24, 1997. Reply comments to these comments must be filed by April 23, 1997. Note that these are **new** filing deadlines, amended by FCC to provide more time for responses.

Before filing comments, you are strongly urged to review:

** The general information on filing comments with the FCC, found at http://www.fcc.gov/isp.html.
** The text of the NOI itself, which may be found at the same web address.
** Comments previously filed by other parties as part of their response to the NPRM.

This is an important topic before the FCC, and we encourage you to make thoughtful, informed comments. AOP will post its comments shortly for the review of our members.

If you have an old Vibroplex Bug Keyer and you have no hope of desire of using it again I would love to hear from you. Or if you have parts to a Vibroplex Bug Keyer. It doesn't matter the condition of the Bug but I would like to know what you want for it?

Better yet (RIGHT!) if you feel sorry for someone who actually wants to use a bug this day and time and want to donate one :) (I had to ask) then drop me an email message and I'll arrange shipping to be paid for and it picked up.

Thanks

Gary .. KW4Z

3575. Re: What does "self policing" mean???

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-14 00:00:00 UTC
From: yodoc@aol.com
Message-ID: <19970214162501.LAA18752@ladder01.news.aol.com>
Source record: 204705

Fred:

You're absolutely correct. "Self-policing" is a term which is, at best, misleading. As hams, we're supposed to influence each other to conduct ourselves in a polite, tolerate, and considerate manner on-the-air. We are also supposed to voluntarily conform to all FCC rules and regulations. When our fellow amateurs decide to step outside the confines of good amateur practice, and violate the rules, we, unfortunately, DO NOT have any "power" beyond that of setting a good example. We can act as "Official Observers" and collect "evidence" of illegal amateur operation; but it is still up to the FCC to act on this information from the standpoint of "enforcement." In fact, ARRL/FCC Official Observers are trained to be aware that they have no "policing" authority at all, and, in fact, are supposed to concentrate on commending "good" operators rather than concerning themselves with "bad" operators.

So, you see, the term "self-policing" is, as you suspected, one which is essentially meaningless.

> too.
>

I'll bet that their problems is not 'memory effect', but something else due to misuse of the batteries. The chief problem is overcharging. People forget to take their batteries off the charger and they severely 'out gas' them. Memory effect is possible, but very rare. You have to charge/discharge the batteries at exactly the same rate and interval hundreds of times before you see it occur. Satellites develop this problem with their batteries because they are subject to exactly the same charge/discharge rate every day. You have to duplicate this situation in a laboratory to see it happen here. It is very rare for this to happen in every day consumer use. Manufacturers of battery products just love to scare the consumer with this possible scenario, but it rarely happens!

I have a problem with my TS-440. The radio just went dead, all bands.
All I get is dots across the display. I had this problem in the past,
but it was only on 14 Mhz, and I replaced a diode and went on with
life. But.... this time it affected all the bands. Anyone got any
ideas on this one.
Frank KG9H

HAMFEST/COMPUTERFEST CALENDAR 1997 - NORTHERN ILLINOIS
last updated February 8, 1997 |

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale and ARRL for providing some of the information.

FEBRUARY 1997

Feb 2 (Sun), Wheaton, IL - Giant Computer show, DuPage County Fairgrounds. County Farm & Manchester Rds., Wheaton, IL. See notes at the end of this article.

Feb 16 (Sun), Orland Park, IL - Giant Computer show, Orland Park Civic Center. See notes at the end of this article.

Feb 16 (Sun), Rock Island, IL - Davenport ARC. QCCA Expo Center, 2621-4th Ave., Rock Island. 7:30 AM - 3:30 PM. Talk in 146.88 and 146.64 MHz. Contact Don Schneider, WD0AMA, (310)-388-0108. email dschneir@saunix.sau.edu

Feb 23 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

MARCH 1997

Mar 2 (Sun), Wheaton, IL - Giant Computer show, DuPage County Fairgrounds. County Farm & Manchester Rds., Wheaton, IL. See notes at the end of this article.

Mar 9 (Sun), Orland Park, IL - Giant Computer show, Orland Park Civic Center. See notes at the end of this article.

Mar 9 (Sun) - Waukesha, WI. SEWFARS Swapfest. Waukesha County EXPO Center, Waukesha, WI 8:00 AM Talk-in on 146.820 pl 127.3 $4.00/$5.00 Ham Radio. Computers. Electronics. Amateur License Exams. For information Contact SEWFARS, PO Box 102, Delafield, WI 53018. 414-650-0724

March 23 (Sun): Grayslake, IL - LAMARS hamfest, Lake County fairgrounds. All indoors. Admission $5 at gate, free parking. Setup at 6 AM, doors open at 8 AM. VEC testing 9 - 12. For Information contact LAMARSFEST, 650 Green Bay RD, Lake Bluff, IL 60044. (Small fest, but usually interesting - AJ9S.)

APRIL 1997

Apr 13 (Sun), Chicago, IL - CARC Ham Auction. DeVry Tech, 3300 N. Campbell Ave. Will auction your electronic goods at this auction if you bring them in before 12 noon. All goods subject to 10% donation. If purchased back by the sell, then 5% will be due. All sales as-is and final. Info: Dean (708)331-7764 or George (312)545-3622, days.

Apr 19 (Sat), Wheaton, IL - Giant Computer show, DuPage County Fairgrounds. County Farm & Manchester Rds., Wheaton, IL. See notes at the end of this article.

Apr 20 (Sun), Orland Park, IL - Giant Computer show, Orland Park Civic Center. See notes at the end of this article.

Apr 27 (Sun), Arthur, IL - Moultrie ARK. Contact Ralph Zancha, WC9V, tel (217)873-5287.

MAY 1997

May 3 (Sat), Cedarburg, WI - Ozaukee Radio Club Swapfest, 8:00 AM. Circle B Recreation Center, Intersection of HY 60 and Ozaukee Cty I. Talk-in on 146.37/97 and 146.52 $4.00 Amateur License exams. Amateur Radio. Computers. For Information Contact O.R.C. Swapfest Committee, W58 N985 Essex Dr, Cedarburg, WI 53012-1439 or call Gabe at 414-377-2784 between 6:00 and 8:00 PM.

May 4 (Sun), Sandwich, IL - DeKalb KARK Hamfest. Sandwich Fairgrounds at Suydam and Gletty Roads. Admission $6. Overnight camping on grounds $10. Talk in 146.73 or 146.52 MHz. Info: Bob Yurs, N9ZNA (815)895-3219 or n9zna@aol.com. Web page: www.tbcnet.com/~jleonard/hamfest.htm (Good, medium sized fest which grows each year. Good restroom facilities. Few commercial exhibitors. - AJ9S).

May 10 (Sat), Peotone, IL - Kankakee Area Radio Society hamfest. Will County Fairgrounds. I-57 to Peotone exit 327 (east). 6 AM. Admission $4. Talk in 146.94 MHz. Info: Willis Bowser, K9IFO (815)472-2079.

May 18 (Sun), Orland Park, IL - Giant Computer show, Orland Park Civic Center. See notes at the end of this article.

May 25 (Sun), Chicago, IL - Chicago ARC. DeVry Tech, 3300 N. Campbell Ave. Admission $5. Info: (312)545-3622 or (312)486-6823.

May 31 (Sat), Springfield, IL - The Sangamon Valley Radio | Club. Illinois State Fairgrounds. This Hamfest is "rain or | shine" with over 100,000 square feet of covered and lighted | fleamarket space, plus indoor facilities. Info: Don, W9EBK | at 217-789-4519. |

JUNE 1997

Jun 1 (Sun), Princeton, IL. Bureau County Fairgrounds. Free parking. Info: Debbie Burton, N9DRU, 1153 Union St., Marseilles, IL 61341-1710, tel. 815-795-2201 (Usually an excellent hamfest, with sellers from Illinois, Iowa, and Wisconsin. - AJ9S.)

Jun 8 (Sun), Wheaton, IL. Six Meter Club of Chicago. DuPage County Fairgrounds, 2015 Manchester Rd. 7 AM. Admission $5. VEC tests 9 AM - 1 PM. Talk-in on 146.97 MHz (107.2 PL) or 146.52 MHz. Info (708)442-4961 or contact Joe Gutwein, WA9IRJ, (630)963-4922.

Jun 8 (Sun), Orland Park, IL - Giant Computer show, Orland Park Civic Center. See notes at the end of this article.

Jun 22 (Sun), Wheaton, IL - Giant Computer show, DuPage County Fairgrounds. County Farm & Manchester Rds., Wheaton, IL. See notes at the end of this article.

JULY 1997

Jul 13 (Sun), Sugar Grove, IL - Fox River Radio League, Waubonsee Community College, Rt 47 at Harter Rd. 6 AM. Admission $5. VEC tests 10 AM only. Talk in 147.21 (pl 103.5 & 107.2 Hz) Info: Diana, WD9API (630)293-7485.

Jul 26 (Sat), Pecatonica, IL - Rockford Amateur Radio Assoc. (RARA) Amateur Radio and Computer Hamfest. Winnebago County Fairgrounds, about 15 minutes west of Rockford, Il. Talk in on 146.61 MHz, 114.8 Hz PL. This will be in the main exhibition hall with room for tables. Ham Radio Vendors, Computer parts vendors, tailgating, food. Code receiving contest, Throw the Radio contest, Great door prizes. For table reservations contact Mike Anderson at (815)397-4304 or mander5@ix3.ix.netcom.com. For any other information contact Marsha Plasters at (815) 399-9233 or wa9ffl@aol.com.

AUGUST 1997

Aug 16 (Sat), Franklin, WI - 7:00 AM, C.A.R.S. Crystal Ridge Ski Lodge. Talk-in on 442.200+ pl 100.0 / 146.52 simplex $4.00/$5.00 Radios. Computers. Electronics. Concessions. Door Prizes. Free parking. Free camping. Large Tailgate selling area. Electricity available, $1.00. Contact C.A.R.S., PO Box 325, Franksville, WI, 53126-0325. 414-325-7427

Aug 16 (Sat), Wheaton, IL - Giant Computer show, DuPage County Fairgrounds. County Farm & Manchester Rds., Wheaton, IL. See notes at the end of this article.

Aug 24 (Sun), Woodstock, IL - Tri-County Radio Group. McHenry County Fairgrounds, Rt. 47. 6 AM. Admission $5.

Talk in 146.52 MHz. Contact Bob Grosse, N9KXG. Info (voice/fax) (847)658-1678. http://www.angelfire.com/il/tcrg/ (Smaller, but fun fest. - AJ9S)

SEPTEMBER 1997

Sep 27 and 28 (Sat & Sun), Grayslake, IL - CFMC's Radio Expo 97. Lake County Fairgrounds, Rts 45 & 120. Admission $6. Talk in 146.76 MHz. Info (708)457-0966. (This is probably the biggest and best hamfest in N. Illinois - AJ9S).

NOVEMBER 1997

Nov 15 & 16 (Sat & Sun), Fort Wayne, IN - Fort Wayne Ham-fest. Indiana ARRL State Convention. Allen County War Memorial Coliseum Expo Center. Sponsored by the Allen County AR Technical Society. Admission $5. Parking $2. www.pipeline.com/~dagagnon/. Info: (219)484-1314.

NOTES - Computer Central and Giant Computer shows

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 708-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

Giant Computer shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $5. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (708)974-3123.

Message-ID: <199702140335.WAA13537@junior.apk.net>
Source record: 204712

Now Your Signature Can Be In Your Computer!

Your letters & faxes can have your signature without
you having to sign them! And because we create your
signature as a True Type font, it will look excellent!
If you are currently using a scanned image of your
signature to solve this problem, let us turn your
signature into a True Type font and say good-bye to
cutting and pasting or importing from outside files
forever.

You will be able to access your signature right from
the font menu. It's easy and it's fast. In the past
you had to import a previously drawn or scanned graphic
that used not only a tremendous amount of space and time
to display - but it also took forever to print. Well,
not anymore. With the MASTER GRAPHICS "Signature"
font, you just click on your font menu for your signature,
and presto! Your selection appears in a snap as a True
Type font in your document, fully scaleable to any size.

Here is what David from San Jose had to say about the
MASTER GRAPHICS "Signature" font... "Thank you for the
quality job that you have done. Also, I found the
installation and use of the font to be explained in such
a way that even a novice, such as myself, was able to
accomplish it successfully."

...Paulina faxed us..."Congratulations, you did a great
job! Thanks a lot, it's wonderful to be able "to sign".

John from West Haven, CT says... "I just wanted to let you
know that I received the signature font...and it works just
fine. Thank you very much for your very kind attention
to the needs of this customer.

Gregg the "Shirtsleeves Accountant" says:..."I installed
the new font... and it works like a charm. Thank you.

S I G N A T U R E F O N T S are priced at only $28.95
per full signature.

YES: Please send me my signature as a True Type font. I
understand that if my signature doesn't work to my satisfaction,
I may return everything for a full refund.

SIGNATURE INSTRUCTIONS:
1. Use a BLACK FINE FELT TIP pen that has plenty of ink or a black "UNI-BALL" pen. These pens produce the best results. At least avoid using a blue ink pen or a Bic Type pen, these pens produce poor results.
2. Practice writing your signature on a plain white sheet of paper.
3. When finished practicing, please indicate which signature you like the most by pointing to it with an arrow. Be carefull not to touch your signature with this arrow or any other marks.
4. Read the following two descriptions and pick one. Then fill out the rest of this form.

I've done such surveys, Joe. Recently I tuned across 20m on a non-contest weekday and did a count. I found a breakdown of about 41% SSB, 31% OOK Morse, and 28% digital and SSTV. There certainly were more SSB stations than my count indicates. I didn't listen long enough to get an accurate count of some of the roundtables, and the county hunter's net had a swarm I didn't even attempt to count. But the breakdown is fairly representative of one on one activity.

I assumed, unless I had an indication otherwise, that each station I heard was in conversation with only one other, so I just multiplied the number of stations heard in each category by two. I didn't note any OOK Morse roundtables, and of course the PACTOR, AMTOR, GTOR, and Clover stations were operating one on one. Some of the RTTY stations may have been in roundtable, but I didn't print an indication of that.

Separating out the swarm on packet was difficult, and I may have missed some of them (I don't have SOTA HF packet equipment since I consider HF packet, as we do it, a lost cause. I just pressed my old MFJ1274 into service to sort out the packet stations). I only heard one SSTV QSO going on during my sweep. I lumped that in with digital since it is a non-voice machine mode. I counted 125 stations on the band (and multiplied that by 2 to represent two way activity).

I should note that this was done during a weekday, in daytime, and is thus heavily biased by retirees. That may account for the relatively large showing by OOK Morse. I did note that many of the Morse station calls copied were of the format expected of pre-68 amateurs, IE 1x3

W and K calls. (I didn't copy everyone's calls, some were too fast for me to copy by ear, and some were sent too raggedly for machine copy, but I did count anything I could recognize as a OOK signal whether I could decode it or not.)

I scanned 75/80m that evening. SSB stations were much more dominant then, 75m was packed with them. About 75% of the stations heard were SSB, 15% digital of one sort or another, and about 10% OOK Morse. There were large stretches of 80m where only noise was heard. That was in stark contrast to 75m where the signals were "wall to wall and treetop tall", and mostly in roundtables. I did make an effort to count the stations in the roundtables accurately this time. None of the OOK Morse contacts appeared to be roundtables, though I did catch one NTS traffic net on OOK Morse. It appeared to have few participants (6), not the swarm I remember from my days as a NTS OOK Morse traffic handler. (This isn't a surprise to me, most traffic has moved to digital modes today.)

I started to scan 40m, but it was quickly clear that the dominant mode there was AM SW broadcast, so I abandoned the count and moved on to 30m. This is clearly the digital band. 70% of the signals copied were digital, with the remainder OOK Morse. The higher bands weren't open, and I don't have a decent antenna up for 160m at the moment, so that concluded my band survey for the day.

The dominant digital mode was PACTOR, with the packet swarm taking second. RTTY was next, followed by Clover and trailed by GTOR. I only heard one AMTOR signal on any of the bands. That doesn't surprise me, it is fading fast as an amateur mode. And I didn't hear any PACTOR II signals during this sweep, though I have heard them on other days, especially when propagation to Europe is good. I don't have PACTOR II equipment, so I'm limited to identifying those signals by ear, and I likely missed some. I know I would have missed several of the Clover and PACTOR signals if I hadn't had good DSP receiving equipment for those modes. I did use the tuning indicator of that equipment to spot OOK signals, and I'd have missed several of them without its aid too.

It is pretty obvious to me that OOK Morse usage is slipping, and that digital has continued to grow since the ARRL survey. It is unsurprising that SSB is the dominant mode on bands where it is allowed, but I was slightly surprised that it showed no greater lead than it did on 20m. Apparently that's a result of retiree bias due to the fact that I sampled on a workday (and due to the growing use of digital methods, even among the older set).

The dominance of SSB on 75m at night was more in line with my expectations. (I was gratified to see digital outstrip OOK Morse on 80m at night. That's a particularly challenging band for digital due to the extreme multipath. That people are able to cope with that is a strong testament to the improvement in the average digital station, and the adoption of more robust modes, over the last few years.) Clover was very close on the heels of PACTOR on 80m. I only heard one RTTY signal on 80m, and it was difficult print. I got the

impression, I missed the brag tape, that the RTTY operation was actually using a mechanical teleprinter and a for real current loop driven homebrew FSK transmitter (it had clicks on shift, indicating hard relay keying of the shift capacitor).

Well, lets see. A 7 AH gell cell 12 volt battery costs about $20,
and lasts about 6 years in normal use. So your battery needs to
last 30 years to reach breakeven on cost. And that's a battery
from a reputable company, not junk. What company supplies your
batteries? And exactly what chemistry do they use?

>And don't forget to try and charge your Gel-Cell from your car socket!
>I want to see that trick, but from a distance.

Why? I charge my gell cells from the cigarette lighter socket. I use
a taillight bulb in series to avoid blowing the cigarette lighter
socket fuse if the battery is really flat (doubles as a handy charge
indicator too). There is no hazard.

> The NiCad "memory effect" I mention has been the bane and the

>were developed. These new batteries have advantages and disadvantages
>too.

The NiCad memory effect requires extremely unusual conditions to
produce. To generate it, you have to discharge the cells to *exactly*
the same state of charge *every* time for several hundred times. It was
first noted in a satellite application where the battery was cycled very
precisely by the orbital dynamics. The solution to this problem is very
simple, don't discharge your battery to the same level *every* time
before recharging.

The problem most users of NiCads have is entirely different. It is a
condition called voltage depression, and is the result of *overcharging*
the battery. Don't do that, not even just a little bit, use a proper charger
which senses charge state and shuts off before overcharging can occur.
I have a number of NiCads with 1970s date codes which are still giving good
service. Of course they've never been abusively overcharged. Gell cells aren't
subject to this malady, though they shouldn't be floated indefinitely or
they'll sulphate.

> My product is a very useful item that offers the most user friendly

>is of no interest to the readers of this newsgroup then I apologize and
>I overestimated their need for good quality products. But I do not
>believe this is true and I will wait to see if the majority of this
>group agrees.

Well, lets just say we're skeptical. If your claims have no more substance
than your claims about the deficits of the competition, why should we believe
your battery is better? Tell us the manufacturer of the battery, and tell
us its chemistry. Then we can decide if your product is worth 5 times the
going rate for a similar product. (I'll grant you that the pouch, sockets,
and cord add *some* extra value to the battery you're selling, but not $100
worth of extra value.)

(this is a copy of my response on this subject to jeffreyH, Busybody)
Well, aren't we self-righteous today! In any event, as it happens I do own a marine radio. It is not portable, and is attached to my large boat. Therefore, it is not suitable for use in a small boat of the sort I rented on my last vacation. The FT-11 was much more appropriate, and, when the engine conked out in my rental boat in the middle of Puget Sound, I was able to call for help! So sorry I didn't use a "type approved" radio- I suppose it would have been much better for my family and I to row the ten nautical miles or so to the coast. In addition, Jeffrey, you really don't have the slightest idea what you are talking about with respect to performance- I have a fully equipped radio communications shop including a Service Monitor and both a HP and Advantest spectrun analyzer and shielded room. I've looked at both of the radios with respect to deviation, spurs, and frequency stability- they are fully the equal of my Midland marine radio. In fact many of the ham rigs are based on commercial designs or vice versa- for example the IC02 and the essentially identical Aircraft HT's.
So go mind your own business Jeffrey.

3592. Anti-Static Wrist Straps

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-15 00:00:00 UTC

Message-ID: <33069F1E.17F4@prodigy.net>
Source record: 204474

http://www.mtechnologies.com/mthome for ham software, kits, the CQC homepage, and more!

I've come by a supply of disposable anti-static wrist straps, which are a great (and safe) way to make sure that you are grounded when working with static-sensitive devices such as CMOS integrated circuits. Sure, you can run a clip lead from your wrist-watch or ear lobe to a convenient ground, and that will take care of static. But it will also route any high-current electricity that you happen to come in contact with, and is a bit like working with your bare feet on a wet floor. The SAFE way to do it, as with these straps, is to incorporate a current-limiting resistance so that static will be grounded off without an increased risk of electrocution.

While I've started including one at no charge with the Island Keyer kits, I've got more than I really know what to do with. So here's the deal--

Send me One Dollar ($1.00) and an SASE with 55 cents postage on it and I will send you FOUR wrist straps.

I'll also include some product literature since it won't increase the postage cost. Or if you are ordering something from Milestone Technologies via the web site (url below) or by phone just mention this to get any number of wrist straps at 4/$1 with no additional postage cost.

By the way, these are genuine 3M 2209's in original sealed packaging, and they are UL certified. They include the wrist strap, paper lead with embedded conductor and resistance, and copper foil tape to attach to a convenient ground.

Send your dollar and an SASE with 55 cents postage to:

Milestone Technologies
3140 S. Peoria St. Unit K-156
Aurora CO 80014-3155

PLEASE if you need more info e-mail me direct at aa0xi@mtechnologies.com rather than take up bandwidth in the newsgroup!

SB QST ARL ARLB008
ARLB008 Comments needed, Little LEO

Commercial satellite interests seeking access to bands below 1 GHz--including amateur allocations at 146 and 430 MHz--now have added 220 MHz to their ''wish list.'' For the first time, Little LEO (low-earth-orbiting satellite) interests have proposed including 219-225 MHz in their list of desired allocations for the non-voice, non-geostationary (NVNG) mobile-satellite service (MSS). The move was contained in the industry's so-called ''flexible allocation proposal,'' delivered at the February 13, 1997, meeting of FCC Informal Working Group (IWG) 2A. Little LEO targets now include 146 to 148, 219 to 225 and 430 to 450 MHz. The ARRL and AMSAT were among those objecting to the concept, and the League is urging those who agree with their position to comment to the FCC by March 4. IWG-2A has been preparing draft proposals for the 1997 World Radiocommunication Conference (WRC-97). These will be reviewed during a March 5 meeting of the FCC's WRC-97 Industry Advisory Committee that is preparing draft proposals for consideration by the United States as it gets ready for WRC-97

The ARRL and AMSAT statement said the latest proposal affecting amateur allocations in the 219 to 225 MHz segment came ''at the last possible moment'' and ''without any technical support whatsoever.'' The League and AMSAT pointed out that the little LEO proponents have had more than a year to complete a technical study of the possibilities of sharing with the amateur services in the 144 to 148 MHz and 420 to 450 MHz bands. ''They have not demonstrated compatibility for sharing these amateur bands but over the evolution of their document have proposed various 'new ideas' for use of these bands.''

The little LEO flexible allocation strategy for WRC-97--submitted as IWG-2A/86 (Rev. 6)--is to propose broad allocations. The apparent theory is that most administrations would find reasons to oppose little LEO use of specific bands in the crowded spectrum below 1 GHz, but that a broad allocation would permit different implementations in different countries depending on local circumstances.

At the February 13 meeting, a coalition of spectrum interests--including land mobile, amateur, broadcasting, and military--opposed the flexible allocation concept on three grounds: that the concept is simply an invention to avoid performing technical sharing studies that would demonstrate the unfeasibility of sharing; that it is inconsistent with decades of ITU allocations practices;

and that, if adopted, the concept would be counter to US interests. The coalition document is identified as IWG-2A/107.

The ARRL and AMSAT submitted a further statement of opposition, citing the absence of any technical studies that might support sharing with the amateur service or the amateur-satellite service and pointing out that the little LEOs have completely mischaracterized the nature of ITU Resolution 640 regarding the use of certain amateur bands in the event of natural disasters. The ARRL/AMSAT paper, revised to reflect opposition to the late proposal to include 219-225 MHz, is identified as IWG-2A/108 (Rev. 1).

Amateurs also might find interesting the comments of the Department of Defense, identified as IWG-2A/101 (Rev. 1). These address the 430 to 450 MHz segment the Little LEOs seek to share.

Anyone wishing to register support for the ARRL/AMSAT submission should send a brief e-mail message to wrc97fcc.gov. The Subject line should say ''Reference No. ISP-96-005 IWG-2A.'' A simple statement to this effect, ''I support the ARRL/AMSAT opposition to the NVNG MSS flexible allocation proposal,'' will be included in the public record and will help to drive home the point that there is broad-based opposition to poorly conceived sharing proposals.

Please note. The proposals the League opposes are not FCC proposals, nor are they endorsed by any other branch of the government. They are industry proposals. The League's objective is to demonstrate there is broad citizen opposition to the industry proposals, so the government will not adopt them as US proposals. So, please don't ''flame'' the FCC if you comment.

Additional arguments or evidence also is welcome. Important. Comments should reach the FCC no later than March 4, 1997.

The complete ARRL/AMSAT opposition statement and other comments will be posted by February 15 on the ARRLWeb page, http://www.arrl.org/ under Band Threat News.

3595. QRO HF owners Feedback needed!!

Newsgroup: rec.radio.amateur.misc
Date: 1997-02-15 00:00:00 UTC
From: jsjones@intrlink.com
Message-ID: <5e3avq$362@clark.zippo.com>
Source record: 204568

I have ordered an Alpha 91B but was told it would be about 16 weeks before I would see it. Since then I have come accross the QRO series of amps and it has got me to thinking, especially since they now have a model HF2500DX which uses the same tubes as the 91B and claims the same performance by the owner of QRO. He actually told me it was built heavier duty which is possible since the 91B weighs 65lbs and the HF2500DX weighs 92 lbs. The QRO amp also is very big in physical size which makes it alot harder to find a place on the shack table for it to fit. I would appreciate any and all replys from owners of all models of QRO amps and especially the HF2500DX. I want to hear both pro and con and if you have had experience with Alpha that would be appreciated also. I like to buy American but only if the quality is there. QRO only offers a 2 year warranty but Alpah offers a 4 year warranty and 30 day money back offer. If QRO did the same I would probably order one now since there is only a 4 to 5 week wait there. I look forward to any and all replies. 73, DE-KS4HK, Steve

Unfortunately, Patti, you still have to learn Morse Code to get an
amateur license with HF privileges. To do what you want in traditional
fashion, you need a General Class or higher amateur license. That
requires a 13 WPM Morse test and a rudimentary written exam on radio
theory and regulations. And unfortunately, learning Morse at 13 WPM
can take up to a year by itself (though some people pick it up much
quicker, you might want to give it a shot to see if you are one of
those people).

If you feel you don't have time to condition your brain to emulate
a modem, there are some alternatives. The amateur Tech license is
easy to get, and will allow you to access the amateur satellites.
This can allow you to send and receive Email via the amateur Pacsats.
Hopefully, P3D will be in orbit by the time you start your cruise,
and that will allow voice communications with roughly 1/3 of the globe
at any given time using equipment possible to carry on shipboard. That
is a challenge for shipboard use, however, since you will need
steerable antennas. Unless you can afford gyro stablized antennas,
that will limit you to operating only in calm seas. The digital
Pacsats can be accessed with a simple omni antenna, however, and
that's easy to arrange for shipboard operation.

A non-amateur Email option is the system offered by Globe Wireless.
It uses digital signaling, a modification of the amateur Clover
system called Clover 2000, on marine HF channels to give you
internet connectivity (and telex capability). This allows you to
exchange Email with virtually anyone anywhere. At 2000 bps
